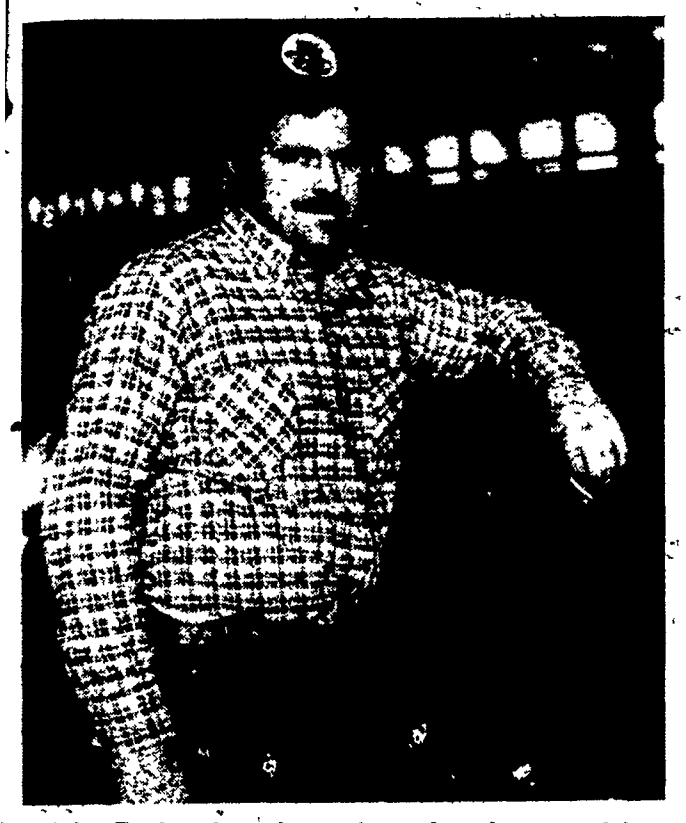
Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas - Also Maryland, New Jersey and Delaware

Vol. 22 No. 16 March 5, 1977 $4.00 Per Year



John Barley doesn't want a refuse barn next to his 380-cow dairy. More than 14,000 pounds of milk are produced here daily, making it the largest operations in the County.

Rally planned Wednesday

Farmers challenge eminent domain

By DIETER KRIEG

WASHINGTON BORO, Pa. - Two busloads of Pennsylvania legislators are due to arrive on the Abram and John Barley farm near here on Wednesday to see for themselves what impact a threatening landfill may have on one of the largest dairy operations in Lancaster County. Pennsylvania Secretary of Agriculture, Kent Shelhamer, may also join the group. Meanwhile, the Lancaster County Farmers Association is mounting a campaign of its own to have "as many farmers as possible" show up at the Barley farm for a show of support and strength.

At stake is a 58 acre tract of land which the Lancaster Area Refuse Authority (LARA) is threatening to take through the power of eminent domain. When news of that landfill plan became widely known late last week, both rural and urban residents of Lancaster County became aroused over the issue. Wednesday's gathering at the farm will bring together this swell of public opinion while most major news services and local media representatives stand by to report. "We've received tremendous support," says John Barley.

According to Abram and John Barley, the case doesn't just involve their farm. They, like many others, are wondering where it may all stop if LARA is allowed to take a portion of their prime farmland. They're fighting, they say, not just to protect their own business, but to set a precedent whereby others may be spared similar agonies in the future.

The Lancaster County Farmers Association, as well as numerous other organizations back the Barleys 100 per cent. That's why they want a good turnout on Wednesday morning to show officials and newspaper reporters where they stand.

State representatives Gibson Armstrong and Noah Wenger, were instrumental in organizing the tour from the Harrisburg Capitol. Both expressed considerable concern over the possibility of losing prime farmland. Secretary Shelhamer has voiced concern as well, telling one newspaper reporter that "Decisions on the use of farmland are too often made by people who don't understand farming."

Shelhamer is a farmer himself who combines experiences as a farmer and legislator in his new post at the Department of Agriculture. While still in the House of Representatives he sponsored a bill which would have layed the groundwork for insulating farmland against indiscriminate use for landfills

[Continued on Page 28]

Abram Barley's main responsibilities in the partnership are crops and soils. He may have 58 acres less to farm if a refuse dump takes a portion of the home farm.

Farm anti-trust act introduced in Congress

WASHINGTON, D.E. - In an effort to reverse the trend toward corporate domination of U.S. food production and insure the future of the family farmer, South Dakota Senator Jim Abourezk has re-introduced the Family Farm Anti-trust Act. The anti-trust measure would require corporations holding more than $3 million in non-farm assets to divest themselves from agricultural production within five years.

"Corporations are increasing their economic control over agriculture through contract farming," said Abourezk. "This centralizes the production and marketing of the nation's food into fewer and fewer hands and gives them more power to determine prices on the market."

"In addition, family farmers find themselves increasingly powerless against these corporations and are being forced to abandon their farms," he added. "Since World War II, 2,000 farms and 300 rural businessess have been driven out of business each week. Meanwhile, food

Fertilizer adequate, prices are up slightly

By DIETER KRIEG

NEW DANVILLE, Pa. - The fertilizer situation for 1977 isn't much different from what it was a year ago, according to some of those closest to the industry. At a banquet sponsored here last Monday by P.L. Rohrer and Brother, dealers in seeds, chemicals and fertilizers, an Ortho Company representative said supplies are good, prices haven't changed much, but distribution could be a bottleneck.

Most of the worries expressed so far this year have been with regard to the natural gas shortage, said John Burton, who attended the P.L. Rohrer meeting. The shortage has affected nitrogen fertilizer production somewhat, but not to the point where shortages can be expected, Burton said. The government has given fertilizer production a priority which is outranked only by home heating, thus the supplies have not been seriously curtailed.

But getting raw materials from foreign countries or shipping bulk fertilizer for thousands of miles across the

Veterinary column added

Beginning this week, Lancaster Farming will feature a bi-weekly veterinary column, written by Lancaster County veterinarian and dairy farmer, Dr. Carl G. Troop.

Focusing his attention on problems and potential problems which may be encountered with large farm animals, Dr. Troop says he will look at situations first as a farmer, and second as a veterinarian. His writings will be based on knowledge gained from his studies and text books, as well as experiences within his veterinary practice and farming situation. It won't be just a lot of theory; it'll be written with the farmer in mind, says Troop, a 1969 graduate of the University of Pennsylvania's School of Veterinary Medicine.

Troop established his

Industrymen gather for poultry seminar

By JOANNE SPAHR

LANCASTER, Pa. - The second of three educational seminars sponsored by the Lancaster County Poultry Association and the Penn State Extension Service was held last Thursday evening at the Farm and Home Center, here. Speaking on the subject of solving egg shell damage problems, at that meeting were John Bezpa, poultry specialist of Rutgers University, and Kermit Birth, Extension poultry marketing specialist of Penn State University. A second topic of "Layer Management," was discussed by Dr. Stan Smith, poultry nutritionist of Agway, New York.

Prior to the speeches by the three featured lecturers, Jay Irwin, Extension agent for Lancaster County, offered a few words of introduction. He explained that in Lancaster County, the poultry industry is now exceeding the $73 million dollar mark, and that it employs from 10 - 12,000 individuals in all phases of production.

"We've got the markets, the industry people, and the know-how, so it's important we keep up with the current developments in the industry," he explained.

Egg Shell Damage Problems

Birth and Bezpa's topic

Elwood Houser named Pork All American

By JOANNE SPAHR

DES MOINES, Iowa - When the American Pork Congress convened at Veterans Auditorium here, last Wednesday, 34 pork producers from across the United States were gathered to receive national recognition as Pork All Americans. Among those 34 was Elwood Houser, Lebanon R5, an active purebred Yorkshire breeder who last Saturday earned the award of Pennsylvania Pork All American at the Pennsylvania Pork Producers Council annual banquet. He then represented Pennsylvania at the congress where he received his national honor on March 3

Designed to recognize pork producers from the age of 25 to 39 who have made outstanding contributions to the pork industry and who have been active in community and agricultural functions, the award goes to one person per state per year. Not all states have delegates, so this year only 34 out of a maxiumum 50 were honored.

Houser, who attributes his receiving the recognition to his work in community and swine industry organizations. is a member of 17 farm groups, and has held leadership roles in seven. He is currently serving as the president of the

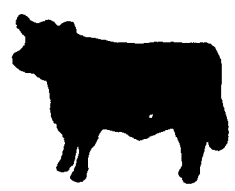
Lancaster Grain Prices

Friday, March 4
These prices are made up of the average prices quoted by a number of participating area feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn and soybean meal which are per ton.
The average prices quoted Thursday, Jan. 20 are as follows:

	Bid+	Offered+
Ear Corn	63.00	71.50
Shelled Corn	2.62	2.81
Barley	2.40	2.60
Oats		
Local	1.72	1.93
Western	2.19	2.37
Wheat		
Millers	2.70	2.90
Soybeans	7.90	
Soybean Meal		248.00



Futures Trading

(Closing Bids as of Thursday, Feb. 24)

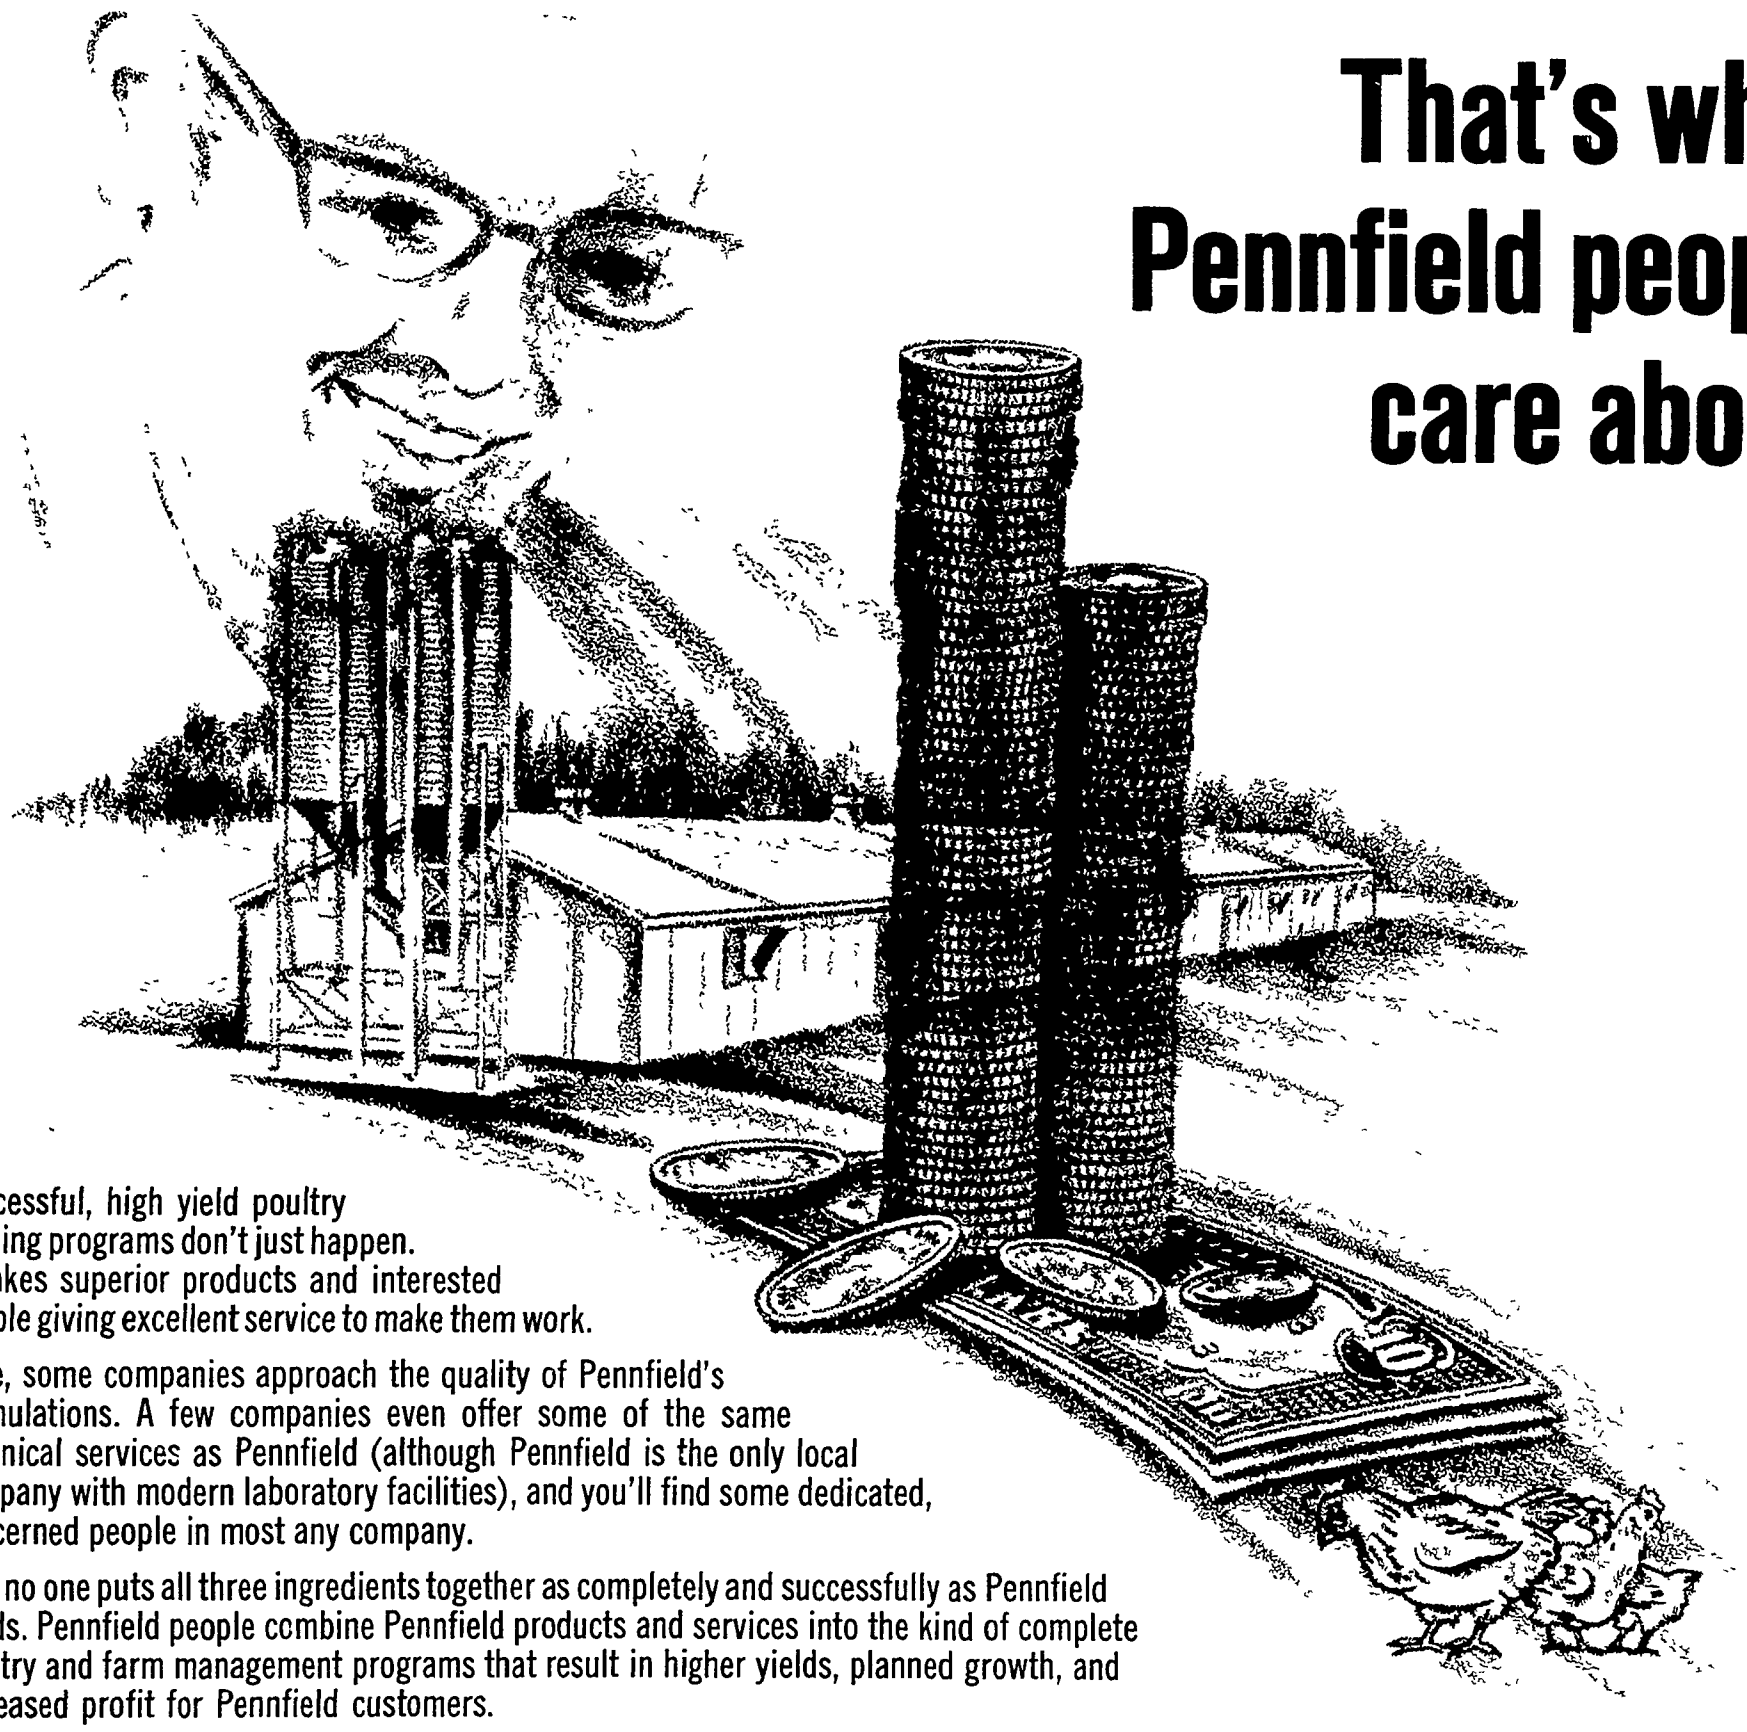
BROILERS

Your POULTRY PRODUCTIVITY, your PROFITABILITY.



That's what Pennfield people care about.

Successful, high yield poultry feeding programs don't just happen. It takes superior products and interested people giving excellent service to make them work.

Sure, some companies approach the quality of Pennfield's formulations. A few companies even offer some of the same technical services as Pennfield (although Pennfield is the only local company with modern laboratory facilities), and you'll find some dedicated, concerned people in most any company.

But, no one puts all three ingredients together as completely and successfully as Pennfield Feeds. Pennfield people combine Pennfield products and services into the kind of complete poultry and farm management programs that result in higher yields, planned growth, and increased profit for Pennfield customers.

Chemists, nutritionists, production personnel, veterinarians, computer technicians, business and marketing analysts, deliverymen, quality control specialists, financial experts, and more . . . led by your Pennfield Area Manager who can put them all together to develop and service a customized, profit-oriented program for you. These are Pennfield people. And, Pennfield people make Pennfield Feeds a better buy.

THE OLD FARMER'S ALMANAC

MARCH 7 - 13, 1977

Hang on, spring is right around the corner.

Clean your cellar this week G I 's cross Rhine River March 8, 1945 Last quarter of the moon March 12 Skunks are mating now Average length of days for the week, 11 hours, 38 minutes First U S paper money circulated March 10, 1862 Iceberg patrols start out now *One father is more than a hundred school masters (George Herbert)*

Ask the Old Farmer: In 1640 one of my ancestors was on a committee in Ipswich, Mass, charged with sowing hempseed, flaxseed, and "card wyer canes" Was this last item used to make brushes to card wool or flax? R D, Amarillo, Texas

Yes indeed They used stiff canes or twigs, splinters of wood and large fishbones Maybe that's where the herringbone stitch originated

Home Hints Shellac is difficult to apply and is sticky unless it is mixed with denatured alcohol before being used

OLD FARMER'S WEATHER FORECASTS

New England: Clear with thaw to start, then rain and freezing-rain by Wednesday, cold with flurries over weekend

Greater New York-New Jersey: Warmer with rain through Thursday, week's end sunny and cold

Middle Atlantic Coastal: Rain through Thursday, 6-10" snow and sleet expected throughout the weekend

Piedmont & Southeast Coastal: Mild with heavy rain, Friday brings clearing and warmer temperatures

Omaha

Omaha, Neb.
March 3, 1977

Weekly 51 - Cattle - Compared with the previous week close -

Slaughter steers and heifers steady to 25 cents lower. Cows 50-1.00 higher and bulls firm to 50 cents higher.

Four Day receipts 11200 as compared 15,000 previous week and 14,200 a year ago. Despite moderate marketings and a reduced daily rate of slaughter, fed cattle prices again came under considerable pressure. Prices were forced sharply downward on the opening session, much of the early downturn was recovered later with demand improved to some extent by storm conditions which rolled across the trade territory. Several midwest packers were out of operation because of labor difficulties and some others reduced slaughter quotas in reflection of poor cut-out results. There was strong seller resistence to the continued price decline in fed cattle prices and marketings were sharply curtailed after Monday. The Steer and Heifer supply was mianly good to average - Choice. Steers made up approximately 37 and heifers 40. Cows comprised 16 and feeders short 5.

STEERS: At midweek high time, load Choice with end prime predominantly 3 1276 lbs.38.00. Choice 2-4 975-1300 lbs. closed 37.00-37 75 with many sales 37.50. Mixed Good and Choice 2-3 950-1225 lbs. 36.00-36.75, Holsteins 34.25-35.00. Good 2-3 33.00-36.00. Standard and Good 2-3 29.00-30.50.

Average of LS-214, detailed quotations, for Choice 900-1100 lb. steers this week 37.18; Choice 1100-1300 lbs. 36.98. Average weight steers first three days 1141 lbs. companred 1135 lbs. previous week. Average weight heifers first three days 991 lbs. as compared 999 lbs. previous week.

HEIFERS: Six loads and part loads Choice and Prime 3-4 957-1074 lbs. 36.75-37.00. Choice 2-4 875-1050 lbs. 35.50-36.75. Mixed Good and Choice 2-3 800-1000 lbs. 34.50-35.00. Good 2-3 31.00-34.00, small lots Standard and Good 2-3 29.00-30.50.

COWS: Utility and Commercial 2-4 24.50-26.50, few 27.00-27.50. Canner and Cutter 21.00-24.50, mixed cutter and utility 24.75-25.50.

BULLS: 1-2 1400-2000 lbs. 30.00-33.50, Individual 1 34.00-35.00.

Lancaster Farming
Serving The Central and Southeastern Pennsylvania Areas

EDITORIAL COMMENTS

By Dieter Krieg, Editor

Let's set a good example

Abram and John Barley of Lancaster County are faced with a nightmarish situation: They may have to see their fertile farmland seized through the power of eminent domain so that bulldozers can scratch the life out of it and refill it with the County's trash.

It's a case the Barley Brothers and their many allies intend to fight standing up, even though the odds against winning may be slim. The fight is a very important one. Not only for the Barleys, but for thousands of other farms in the Garden Spot and elsewhere The question is: If this farm can be taken so indiscriminantly and callously, how many others will face the same kind of fate in years to come?

With all the talk about conservation of natural resources going on, it's ironic and hypocritical that an A-1 farm such as the Barleys' is even being considered for a landfill. What can possibly be a more precious resource than the soil which feeds us?

Credit must be given here to a majority of people who evidently understand the potential consequences of the landfill idea if it is carried out. Support for the Barleys has come from just about everyone except the Lancaster Area Refuse Authority (LARA) and its attorneys. The Barleys have been swamped with favorable phone calls and mail. On Wednesday of next week there'll be a large gathering at their farm to demonstrate the solidarity among Lancaster Countians who believe that LARA should reconsider its plans.

The Barley Brothers own about 300 acres, of which 58 might be taken in the near future for a landfill. In years to come they may be faced with similar situations. And if not them, then possibly their neighbors. The farm's main source of income is milk, of which [illegible],000 pounds are produced daily.

There is reason to believe that some

[Continued on Page 44]

Shelhamer deserves credit

Pennsylvania's new secretary of agriculture, Kent Shelhamer, deserves a lot of credit for the efforts he's making in establishing definite contacts with the people whom his department serves. The Columbia County farmer and legislator became head of the department by appointment from Governor Shapp on Jan 15. On Valentine's Day, appropriately enough, the Pennsylvania Senate gave unanimous approval

Ever since, Kent Shelhamer has left it be known that his door is open, and that he wants to do all he can for Pennsylvania's farmers

The new secretary has gone about his "campaign" in a unique way, especially when one considers that a man in his position could make things a lot easier for himself. Shelhmaer could have chosen to put his name before the public by way of a "propaganda blast," an onslaught of so-called news releases and the like. Shelhamer, an amiable and down-to-earth kind of individual, chose to go directly to the farmers he's supposed to serve. He has accepted one speaking engagement after another, chatted with complete strangers and extended a warm wlecome to all who care to communicate with him. All along he has also been keeping close contact with his responsibilities at the office in Harrisburg. The pages of this newspaper attest to the fact that Shelhamer is active.

It must be a grueling schedule and we observers may be right in wondering how long the enthusiasm, sincerity and dedication can last. We can all hope that it will last a long time In the months and years ahead, we may not always agree with what the Pennsylvania Department of Agriculture is doing or has planned But we can take satisfaction in the fact that with Shelhamer the state's 72,000 farmers have a man who's trying hard not to isolate himself from anything.

"I am proud to be serving as your secretary of agriculture," Shelhamer told a group of farmers in Lancaster this week.

Pennsylvania farmers can be proud to have him.

Greedy bankers

A scheme by financial giants to buy up huge tracts of highly productive farmland in the Midwest is apparently temporarily stalled. Concerned legislators and agricultural organizations banded together to slow down the plan. But the battle is anything but over, as it generally never is when one is dealing with big money. An Illinois bank, ranked eighth largest in the nation, and a brokerage firm which ranks as biggest of them all, are big money. So is farming if you control enough of it.

While actions are already underway to hold back schemes which would put farmland in the control of financial giants, instead of individual farmers, this is one of those situations where a little more effort wouldn't hurt. It would undoubtedly be a good idea to write to senators and congressmen to let them know how you feel

A plan to buy up tens of thousands of acres of good corn and soybean land isn't likely to benefit the ordinary farmer, who thrives on the ideas of self-employment and pride of property ownership.

Good neighbors

Some words of praise are in order to those who work hard to minimize the grief of others who suffer through tragedies The "Good Samaritan" trait is fortunately one which surfaces over and over again among rural folks, especially in this part of the country. There's keen competition when all is in order, and then there is vigorous help ; lots of it - when tragedy strikes

Two recent barn fires, one in York County and one in Lancaster County, stand as evidence that the "I don't want to get involved syndrome" hasn't even the slightest foothold among farmers And that's been proven with most every other tragedy which has hit a farmer.

The quick responses and dedicated help which people give to their neighbors so freely is something which is often overlooked by the media. It's something which should probably be publicized to a greater extent so that others in town can maybe learn something from it.

BY LAWRENCE W. ALTHOUSE

MISSING THE POINT

Lesson for March 6, 1977

Background Scripture: Mark 10:35-45; Luke 10. Devotional Reading: Luke 10:30-37

The request that James and John made of Jesus is almost unbelievable - at least until we remember that audacity has never been in short supply, even in the church. Nevertheless, James and John still tend to shock us!

"Teacher, we want you to do for us whatever we ask of you" (Mark 10:35)

That by itself would be sufficient to cause our jaws to drop· how presumptuous to even make such a request, regardless of what they would ask! But their audacity seems to know no limits, for when Jesus responds with, "What do you want me to do for you?" they answer

"Grant us to sit one at your right hand and one at your left, in your glory" (Mark 10:37)

Imagine! Just a little favor, Lord make us Vice Presidents in the Kingdom - First and Second Vice Presidents, that is'

You do not know what you ask

There is but one thing that we must hand these two men. they were certainly candid about their desires. In fact, it is probably this innocence mixed with their brashness that softens Jesus reply: "You do not know what you are asking. Are you able to drink the cup that I drink, or be baptised with the baptism with which I am baptised?" (10:38). And the breezy assurance with which *they answer indicates that* they really do not know what they are asking: "We are able."

Jesus' patient forbearance is almost as impressive as their arrogance is shocking, for instead of a stinging rebuke, it is a patient explanation which he gives to help them understand the issues they have raised. If Jesus had responded with some irritation or annoyance no one could have blamed him.

To us, of course, it is quite apparent that they did not understand what they were asking. For one thing, they apparently did not understand what Jesus meant by the Kingdom of God. They are still holding the traditional and popular concept of a temporal *kingdom with secular power,* military might, and a royal court. Somehow they had missed the point. the kingdom of God was really the kingdom within, a kingdom of man's spirit, of God's rule in the heart

Not so among you

Secondly, they obviously misunderstood what discipleship meant They seemed to think it meant being in on the "ground floor" for status and power in the kingdom. They thought in terms of rank, whereas Jesus emphasized not rank but service: "...whoever would be great among you must be your servant" (10:43).

Thirdly, they did not comprehend the kind of power that would compel with force, whereas Jesus spoke of the power of love and self denial: "For the Son of man also came not to be served but to serve, and to give his life as a ransom for many" (10:45).

From our vantage point, we wonder how James and John could have so badly missed the point, for to us it seems so obvious.

Can it be that we still miss the point?

NOW IS THE TIME...

TO OBSERVE WINTER GRAIN CLOSELY

Many Winter wheat and barley growers are concerned about their grain crop; since it got off to a slow start last Fall, and due to the severity of the Winter, some may feel the crop is not worth saving This depends upon several factors such as the amount of snow cover during January, and the amount of growth last Fall I'd suggest that growers check the field frequently when warmer weather arrives to observe the thickness of the stand. If the plants are there when Spring growth begins, then a top-dressing of nitrogen fertilizer might go a long way in getting a normal crop. Don't disc it down until it has a chance to grow

TO CONSIDER BEEF REFERENDUM

All beef and dairy producers should be taking a look at the forthcoming national referendum as a self - help check - off program to help the entire beef industry. This program includes a three-tenths of one percent of sale value deduction for all animals sold for meat purposes to provide funds for research and promotion in the beef industry. Both dairy and beef cattle owners are involved. The starting point is to sign up at the local ASC office before being eligible to vote later this Spring. This may be a controversial program, but producers should be evaluating the proposals and then fulfill their duty of voting as they see fit. Don't let someone else do your thinking and voting for you.

Nat'l pork queen graces state banquet

Elwood Houser, (left) receives a $300 check from Hank Edwards (right), representative of the Shell Chemical Company, Animal Health Division. Houser was named Pennsylvania Pork All American at the Pennsylvania Pork Producers Council annual banquet. The money he received from Shell was to go toward his trip to Des Moines, Iowa, for national recognition at the American Pork Congress.

By JOANNE SPAHR

SCHAEFFERSTOWN, Pa. - Terri Ward, the 1976 national pork queen, graced the gathering of the Pennsylvania Pork Producers Council last week when they met for their annual dinner banquet at the Schaefferstown Fire Hall, here.

Miss Ward, the 19-year-old daughter of Mr. and Mrs. Richard Ward of LaMoille, Ill., has been serving the pork industry for two years in a promotional capacity. Two years ago she reigned as the Illinois pork queen which served as a preparation for the national title she now holds.

Since her crowning in Indianapolis on March 10 at the American Pork Congress. she has traveled across the country to promote pork on behalf of the nation's producers. In her after-dinner speech to the Pennsylvania group, she told of some of her experiences on the radio and in personal appearances around the country.

Miss Ward also showed a film describing the ways in which the National Pork Producers Council is spending the money they receive from producers for pork promotion. In that film it was pointed out that the NPPC is the largest commodity organization in the United States with a membership of 80,000 individuals. Eighty per cent of the funding they receive from the pork producers goes toward making the public aware of pork and its values.

Following Miss Ward's speech, the organization handed out youth awards to its deserving younger members. Donald Brown, Hanover R1, received a 4-H swine production award. Brown, age 16, raised 10 sows as a project, and from those 10 sows got an average of eight pigs per litter. The highest he ever had in one litter was 13. He raises mostly Yorkshire crosses. In order to receive the 4-H production award, Brown filled out 4-H blue forms and was judged on these.

Jay Bomgardner, Annville, also received a trophy from the Pork Council for his showmanship honors at the State Farm Show.

Elwood Houser, Lebanon R5, was also named Pennsylvania Pork All American at Saturday's event for his outstanding work in the swine industry. Later in the week, Houser went on to be named national Pork All American at the American Pork Congress in Des Moines, Iowa. Further information on Houser can be found in a related page one story in this week's Lancaster Farming. At the state banquet, House received $300 from Hank Edwards, a representative of Shell Chemcial Company, Animal Health division. This money was to go towards Houser's trip the Pork Congress.

Following the conclusion of the meeting, the board of directors of the organization met for a short meeting regarding a change in the check-off system at a Lancaster market.

Terri Ward

Donald Brown, Hanover R1, received the 4-H swine production award from the Pennsylvania Pork Producers Council at their annual banquet last week

First step to a great corn crop

A planter in a freshly worked field is a sure sign of spring. And when you've filled your planter boxes with Pioneer® brand hybrids, you've taken a big step toward a more profitable corn crop.

Last season's harvest results show that farmers made more net income per acre with Pioneer than any other brand. More proof that year after year Pioneer stands up and brings in load after load of drier grain.

It takes research to develop higher yielding "Fuel Savers" like Pioneer hybrids. That's why Pioneer does more corn research than anyone else.

So when it's time to plant, make sure you get off to a more profitable start by planting Pioneer corn.

PIONEER®

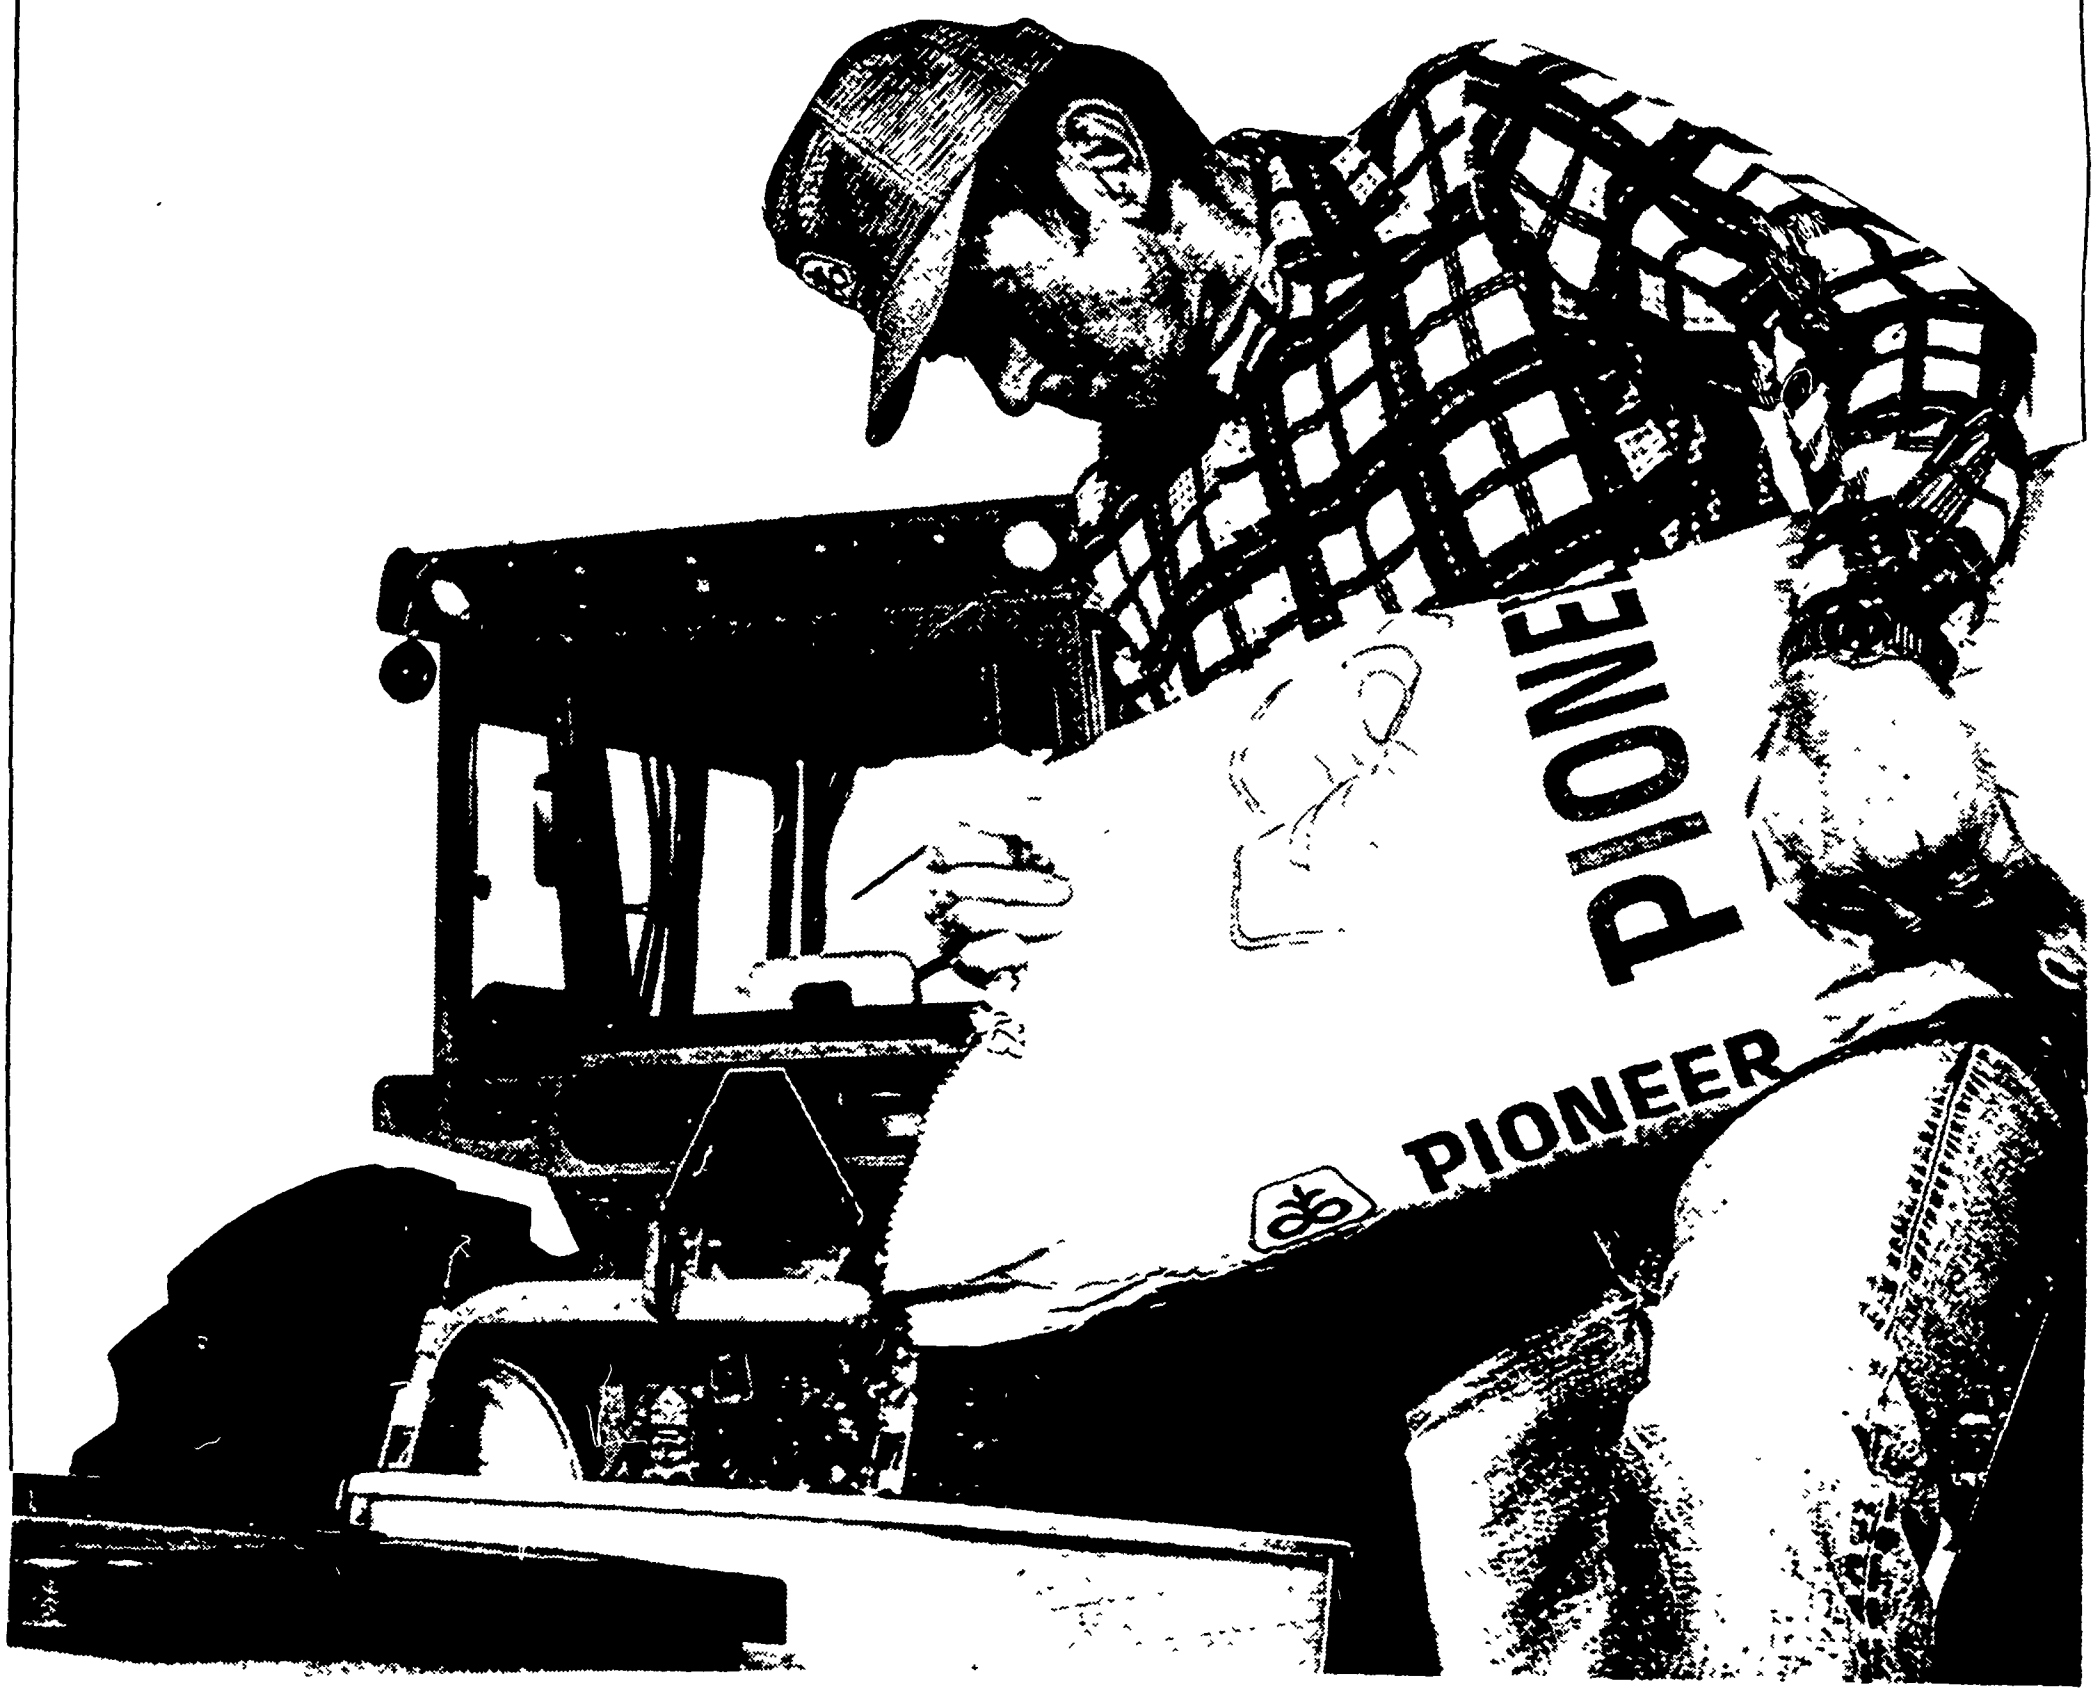
The more you plant...the more you make.



Poultry disease discovered

WASHINGTON, D.C. Two separate, but possibly connected, outbreaks of exotic Newcastle disease some 4,000 miles apart have both the poultry industry and USDA quite concerned. Neither outbreak, however, is in commercial poultry and the nearest poultry operation to either quarantined facility is four to five miles away.

The first suspected outbreak, on Feb. 18, was detected at Charlotte Courhouse, Va., in an aviary wholesale outlet.

The second case was reported Feb. 23, from San Diego, Calif., first in a wholesale outlet and then in a flock of pheasants.

According to USDA, there were 18 shipments of birds from San Diego into other parts of California, and four shipments into Oklahoma, Louisiana, New Mexico and Arizona. From the Virginia wholesaler, birds were shipped into the following 19 states: Connecticut, Pennsylvania, Massachusetts, Maryland, Ohio, Virginia, Michigan, Illinois, Kentucky, Tennessee, Mississippi, North Carolina, Georgia, Florida, Louisiana, Colorado, Missouri, Iowa and California.

Poultrymen are advised to observe strict sanitary production rules and to check any suspected mortality. According to USDA officials, who apparently have the situation well in - hand, there is no evidence of exposure to commercial poultry in any of the areas currently suspected.

Bank's land plan braked

WASHINGTON, D.C. - U.S. Congressman Tom Harkin (D-5th Ia.) says he thinks opponents of the Continental Bank and Tust Company of Chaicago's plan to set up a $50 million corporate investment fund to buy farm land have succeeded in blocking it.

Harkin called for congressional hearings to investigate the plan and served on the U.S. House subcommittee which held hearings on the matter for three days.

"While the bank has yet to makes its official decision, I think it's been effectively stopped," Harkin said after the hearings. Harkin noted the bank pledged to give "great weight" to congressional attitudes toward the plan. "All the Democrats and all the Republicans on the subcommittee were unanimously opposed to it," Harkin said. "In light of their previous pledge, I don't see how they can do anything but drop this idea."

Harkin also said he thought it "unlikely" the Internal Revenue Service (IRS) would grant the tax - exempt status the bank had sought for the trust fund. Testimony at the hearings raised "serious questions" about the plan's eligibility for such status, he said.

"Even if IRS did grant them tax exempt status, I still don't think they'll proceed with the plan," Harkin added. "They realize the minute they might try to go ahead with this, Congress is going to move to put an immediate stop to it."

Harkin warned, "While the plan has probably been defeated, we must remain on gaurd to see that it's not resurrected at a later date." He urged adoption of the Family Farm Anti - Trust Act, which he has co-sponsored, to permanently block any future similar proposals.

the Soil that Cares for You!

WHY SHOULD YOU CONSIDER

AGRI-SOIL CONDITIONER

Farm Observations Show:

1. Crumbly, More Porous Soil
2. Elimination of Wet Spots in Gumbo-like Soil
3. Increased Effectiveness of Tile
4. Reduction in Amount of Water Runoff
5. Easier Tillage of Soil
6. More Uniformity in Growth and Maturiety
7. Higher Yield Potential

Other Agri Products Are:

AGRI-A-WETTING AGENT
AGRI-FS FOLIAR SPRAY
AGRI-O PENETRATING OIL
AGRI-C FARM IMPLEMENT CLEANER

Postmortem exams essential to poultry health

LANCASTER, Pa. - In the first of three educational seminars sponsored by the Lancaster County Poultry Association and the Penn State Extension Service, Dr. Robert Eckroade, director of the Cooperative New Bolton Center Poultry Diagnostic Laboratory, University of Pennsylvania Veterinary School - Pennsylvania Department of Agriculture, spoke on "Poultry Health for Broilers, Layers, and Turkeys," He addressed an audience of approximately 50 industrymen at the Farm and Home Center, here, last month.

Touching on a wide range of topics including preventative avian medicine, poultry postmortem examinations, and infectious bursal disease, Eckroade first began his lecture by familiarizing the audience with the lab facilities and objectives of the New Bolton Center Poultry Diagnostic Laboratory.

The lab is tax supported through the Pa. Department of Agriculture and therefore, free of charge to those taking advantage of it. But, according to Eckroade, not enough farmers are using he facilities available to them.

"In my opinion," he said, "the labs aren't being utilized to their fullest, and we want to generate more interest."

The lab sets out to do two basic things. First of all, it is used for emergency situations or for day to day poultry disease problems in which answers are needed immediately.

"We can do viral, bacterial and mycoplasma isolation work to look for the answers," Eckroade said, but he made it clear that emergency work isn't all the lab is set up to do.

Preventative avian medicine is another area of poultry health which the lab is designed to handle, and one which Eckroade stressed as being of key importance.

"We need to have more routine necropsy exams done," he emphasized. "And, we're not looking at enough birds early in the grow - out period." Many times, the lab will get the birds, (pullets and layers mostly) when they are 35 to

Dr. Robert Eckroade

40 weeks old, only to find that they have a mycoplasma infection problem. By this age, it is too late to get the most out of medication costs to treat this flock - the birds should have been brought in at about 20 - 24 weeks.

"That's too bad, because we have a free service, and if we would do these check ups on a routine basis, many of the large problems wouldn't develop," he pointed out. In the case of the mycoplasma infection, he challenged every poultryman there, to know the mycoplasma status of both on - farm birds and new pullets.

Another measure of key importance in diagnosing poultry disease problems is making sure the sample taken to the lab is a typical example of ongoing flock disease. This takes more work on the part of the producer, but saves time and money in the long run.

"The most important thing you can do whether you're coming for a routine necropsy or because there's a problem and you need the answer fast, is to bring in a typical example of your birds to us - selection is paramount," he emphasized. Many times the lab receives cull birds that aren't typical examples of the real flock problem. When the final diagnosis is made, therefore, the question they are faced with answering is, "Is this a flock problem or an incidental occurrence?" Selection of birds helps to answer this question.

Eckroade also made the point that if a large mumber of birds in the flock are dying, the producer should perform weekly or daily

MEDICINE AND MANAGEMENT

By CARL TROOP, VMD

Notes on freshening time

AUTHORS NOTE: Veterinarians are in the unique position of usually being called upon only when there are problems, or, more hopefully, to prevent problems. We see what is going wrong more often than what is happening right, the mistakes more often than the proper decisions, and the conditions, environment, and management that contribute to them. It is the hope of this column to be able to use this position as a veterinarian, along with being able to understand the farmer and what is practical for him; to incorporate the two into a helpful, meaningful, practical guide for many of todays modern problems, along with seasonal hints and suggestions. It is in no way intended to be a substitute for proper veterinary service and consultation with your own veterinarian for your own particular problems; but rather to encourage ways which farmer and veterinarian can work more efficiently together to insure optimum use of the many services which your veterinarian can provide.

It is only fitting to begin this series with the most important day on the dairy farm, D-day or delivery day. It must be realized that this day is important for two animals, the cow and her calf, and any decisions made must be made in the light of the effect it will have on both. There have been hundreds of columns written on this subject, but some of the things which can be done on this particular day are so important they cannot be stressed too much. And these few things are the ones which, if neglected, will cause the greatest losses.

The maternity pen is one of the most important areas on the farm, but unfortunately, usually the most neglected. It is the place where every replacement gets its start and every cow begins what is hoped to be a profitable lactation. There are many things which can be done to positively influence both.

The size of the pen itself is very important. It should be at least 15 ft. by 15 ft. or a minimum of 225 square feet, preferably larger if possible. Many of the problems arise in pens so small that regardless of where the cow lays down her front end is against one side making it difficult to rise, or her back end is against the other side making it difficult to calve or to assist in calving should that be necessary.

The floor of the pen can be dirt or concrete, but if concrete it should always have at least an eight inch firm manure pack. Cows and concrete do not get along well together, especially cows which are already under stress and at a time when locomotion may become difficult for a variety of reasons. There are many fresh cows lost because they did not have good footing when they needed it. Dirt and firm manure packs provide it. Concrete, even concrete covered with straw does not.

The pen should be well bedded, well ventilated, well lighted, dry, and free from drafts. Each of these is very important, easy to provide in a properly constructed pen, and should never be even slightly compromised, but all too often are partially or completely neglected. Poorly ventilated or drafty pens and respiratory problems are constant companions. This is a period of stress for cow and calf, and everything we can do to lessen the stress will increase the chances for success.

The most important economic loss with fresh cows is not milk fever but mastitis. Most farmers are alert for and recognize early signs of milk fever, and it is relatively easy to treat. It is amazing, though, how few cows are checked for mastitis when they calve. Depending on the type and severity of the mastitis, a matter of just a few hours can mean the difference between an infection that is still treatable and one that is beyond control. Several times a month I am called to check a fresh cow off feed where mastitis is the only problem and the farmer does not know it exists. So check those fresh cows for mastitis. Check them as they are springing if any unusual hardness or uneven swelling exists. If mastitis is a problem, the quarter should be stripped out and treated, even if it means increasing the chances for milk fever. Milk fever can be treated. Many advanced mastitis cases can not.

Now for the calf. Again it has been written many times of the importance of getting that colostrum into the calf as soon after calving as possible. And again this one practice is so important it cannot be stressed too much. The calf should receive colostrum within 30 minutes after birth if possible, as any delay is going to decrease the effective immunity it gets from the colostrum, and increase its susceptibility to many diseases. The navel should also be dipped with iodine as soon after birth as possible. The condition of the maternity pen is as important for the calf as it is for the cow. If you are willing to compromise these conditions, and the few moments it takes to properly care for cow and calf, then you should be prepared to compromise the quality of the products that come out of these pens. If you want cows and calves with a head start on the stresses in the days ahead, it is going to take a little time and effort, but it will be time and effort which cannot be matched for returns by any other endeavor on the farm.

One final point. As stated before, the maternity area is the most important area on the farm, but all too often the most neglected. If yours is inadequate, the next time you are considering remodeling your barn, adding to or building on, or just trying to figure out what financial investment might give the best return, think of the maternity area. A new tractor or disc can wait if you could build or remodel to provide your cows with a more ideal environment in which to calve, one designed to be well lighted, easy to keep dry, well ventilated, and free from drafts. It would generate returns for years to come. Believe one who has seen and worked with all the problems. It is something worthy of your consideration, for it is the foundation from which your livelihood is built.

AAtrex® 4L offers you added convenience

The same smooth, pourable, easy to handle AAtrex . . . but in a more convenient, easier to handle 2½ gallon jug. This new jug does two things. It gives you fewer jugs to handle than the 1 gallon size. And it's only half the weight of the 5 gallon jug, obviously. Not so obvious is the fact it empties in 13 seconds and it's completely burnable, for easy disposal. AAtrex 4L. For weed and grass control you can count on. Won't hurt corn; just the weeds. Shouldn't AAtrex 4L be your herbicide of choice?

Elwood Houser

[Continued from Page 1]

Tri-County Pork Producers organization; has served as director and vice president of the Pennsylvania Yorkshire Coop Association; is on the executive committee of the Pennsylvania Swine Coop; is a board member of the Pennsylvania Pork Producers Council; was a director of the Lebanon County Farmers Association for two years; and has served as secretary, vice president, and president of the Cedar Crest Young Farmers Association of which he is a charter member and now serves on various committees.

Other organizations to which he belongs include: American Yorkshire Club, Lancaster County Swine Producers, National Pork Council, Pennsylvania Farm Show Committee, American Holstein Assn. Lebanon County Holstein Assn. Pennsylvania Young Armers Assn., Pennsylvania Farmers Assn., and 4-H, in which he is a club leader. He is also active in his church, the Midway Church of the Brethren.

In defense of his activities, Houser says, "I've always enjoyed being active and I feel it's beneficial to get involved, because there's always something new to be learned." He also admits that his activities keep his so busy he can have meetings scheduled every night for two weeks straight during the height of organizational meeting season.

Houser, at age 38, has been in farming for 29 years now, although he has only been in business for himself since January of 1976 when his father retired and dissolved the partnership they had had for 10 years.

"I'm always learning he says. "You never stop learning in this business," he continues when explaining some of the management practices he employs with his animals. He believes that a good feeding practice is a must and he has learned through a trial and error basis that it is best for him to feed his animals four pounds a day when they are on pasture.

His housing and equipment facilities include a concrete block farrowing house which contains 14 pens, 6 x 12 feet. The pigs are then finished in an open front building, and are also fed out in the bottom of a barn and in an old hog shed.

Houser likes to market his animals between 210 and 230 pounds, which is generally at six months of age. Most of his animals go straight to the New Holland Auction where he has his dimes taken off for use in promotion.

He also raises 70 head of steers, and has 133 acres of corn, 15 acres of alfalfa, and 25 acres of barley and wheat. The remainder of the 230 acres which he rents from his father is in pasture.

Prior to the dissolution of the partnership, Houser and his father had also run a purebred registered Holstein dairy. After the dispersal sale, however, Houser bade that part of the business goodbye for a while, although he has all the facilities available should he choose to start the business up again. He prefers raising livestock because he says it gives him more time to work out in the fields.

While Houser has been raising Yorks for 25 of his 29 farming years, he first began with beef and dairy. His "start" came at the age of nine when he took a 4-H baby beef project.

He was active in three other clubs at the time, but his main emphasis was the beef, which he was involved with for six years. His first real interest in swine began in high school, however, when he joined the Future Farmers of America. Starting out in dairy with a Sears chain calf, he got his first Yorkshires during his second year of FFA. "And, I've been going with Yorks ever since," he says with a smile.

During his years with the Future Farmers of America, he earned "nearly every award you could get," and culminated his efforts with the American Farmer Degree in 1959. He also won the Dekalb Award and was a delegate to the American Institute of Cooperatives Convention in Raleigh, N.C. At the time of the American Farmer Degree, he was mainly involved with dairy.

Asked about what he sees in the future for the hog market, Houser answered that he predicts a better market late in the year, and especially in the beginning of next year. At present, disease problems are killing off baby pigs; herds are decreasing; and the tail end of the heavy production from last year's high market price is coming to slaughter, so there is a definite production cut back which should make a good market in the coming months.

Elwood Houser injects this pig with an iron shot. Houser has been a purebred Yorkshire breeder for 25 years, and last Thursday won national recognition as one of 34 Pork All Americans from across the United States.

Pickings were slim in 1926

WASHINGTON, D.C. - Those so - called "good old days." Were they really that good? Maybe not - at least for farmers. Fifty years ago, for example, farmers harvested 99.7 million acres of corn, got an average of 27 bushels per acre, produced 2.7 billion bussels of corn over - all. They got less than 74 cents a bushel for it on the average.

Last year, they harvested 71.1 million acres of corn, averaged 87.4 bushel per acre, produced a total of 6.2 billion bushels over - all, and got an average of $2.37 per bushel.

Back in 1926, oats was our Number Two grain (there were, after all, 5,740,000 horses and mules on farms to feed). Thus, the farmers of 1926 harvested 44.2 million acres of oats, got an average of 28.3 bushels per acre, wound up with 1¼ billion bushels over - all. They got an average of 39.8 cents a bushel for it.

Last year, U.S. farmers harvested 12.4 million acres of oats, averaged 45.4 bushels per acre, produced 562 million bushel over -all. They averaged $1.53 per bushel for it.

Farmers harvested 1.66 million acres of tobacco i 1926. They got an average of 783 pounds per acre. Total production was 1.23 billion pounds. Prices averaged 18.2 cents per pound. Last year, they harvested 1.0 million acres, averaged 2,032 pounds per acre. Total production was 2.1 billion pounds. Prices averaged $1.12 cents per pound.

Now, on net income per farm. Back in 1926, just 2.29 pounds of the farmers had $5,000 or more; 5½ per cent received $3,000 to $4,999 per farm; 62 pounds netted under $1,500; nearly three pounds showed losses of $500 to $1,000 for the year.

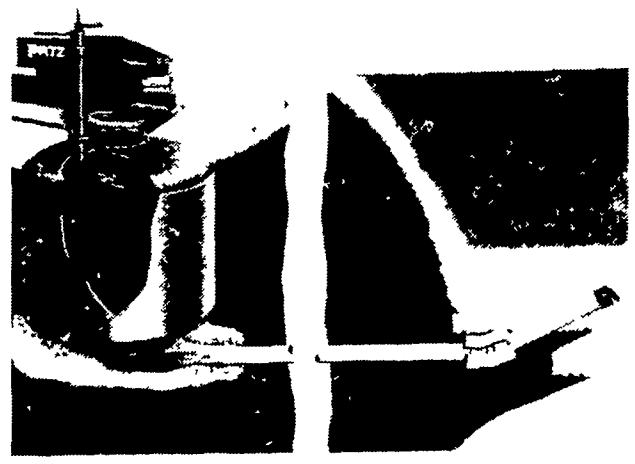
Deadline is today for signing up for the Lancaster County Holstein Club's tour to Centre County. If interested, contact Ken Rutt at 717-786-3591

What's new



Patz Company brings a new twist to manure movement with its 200 compressed air Manure Mover. Slurry is added to below ground 1700 gallon (U.S.) 3/8 inches steel pressure vessel through a top hatch. A few twists above ground closes the hatch. Added compressed air from as small as a one horse power compressor pushes slurry out through an underground 12 inches PVC pipe to holding facility up to 150 feet away. Hatch mechanism and back flow prevention valves at tank bottom and in holding facility are the only moving parts...all accessible without concrete breakup. Relief valve is provided for pressure release. More information is available by contacting Patz Company, Pound, Wis. 54161.

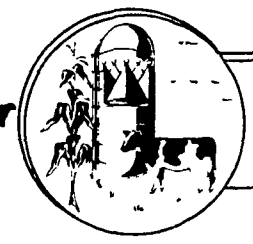
AGRI-KING
KEY TO PROFIT



GROSS INCOME – NET PROFIT
IS THERE A DIFFERENCE?

Yes, and it is very important to know the difference.

It is not nearly as important to know how much a ton of feed costs as it is to know the profit per cow per day over total feed cost, because that is what you have left to take to the bank.

Many farmers today have been tricked into buying something without even knowing if they need it. There is only one way to get the most profit per head of livestock and that is to test what you feed and feed accordingly. With today's rising feed costs the dairyman cannot afford to feed by guesswork any longer. He must know what is in his silage, hay and grain and make the grain ration according to these tests, properly balancing the protein & energy, calcium & phosphorus, vitamins & trace minerals, so that they meet the requirements of today's cow with high levels of production.

If you would like to know more about the Agri-King way of feeding cows, please contact your nearest serviceman or wirte to George DeLong, 225w. Woods Drive, Lititz, Pa. 17543.

Arcadian Liquid.

Easy way to feed and weed.

Knock off two important jobs in one easy trip. Just add a proper herbicide to Arcadian Golden URAN® or SLF mixed liquid fertilizer while the circulator pump is running, and weed as you feed in one trip over your field. One feed and weed application can do away with several time-consuming cultivations and the resulting crop thinning, root damage and soil compaction.

Your crops grow faster when roots don't have to compete with weeds for plant food and moisture. And the bigger yields are easier to harvest in weed-free fields.

Only liquid makes feed and weed so easy. It's easier still when you have us do the job for you Our custom application will free you for other jobs and assures uniform results. So stop in or call. You can count on us to give you the best combination of crop protection chemicals and liquid fertilizers.

LIFE on the farm

By Dieter Krieg, Editor

By DIETER KRIEG

Having missed my scheduled flight for a brief visit to my parents' farm in Florida, I waited for the next available connections. That made me decide to re-schedule the return flight as well, leaving the sunny South a full six hours later than I had originally intended

The trip home was absolutely no fun.

Sitting towards the rear of the DC-9 late that night, all that was keeping me awake was a severe pain in my ears which was the result of frequent altitude changes. This particular flight made several en-route stops

About half-way to Baltimore, the pilot informed the handful of weary midnight travelers that weather conditions in the Maryland-Pennsylvania area were miserable The plane would be able to land, but there was much snow on the ground and it had just recently been topped with freezing rain.

"I'll have a great time driving home," I thought to myself. Marvin was expecting me home Sunday night

As the airplane approached the airport, the lights and dimly-lit scenery looked out-of-place There had been no snow here less than 48 hours ago Now the place looked like a refrigerator which was in desperate need of defrosting What a lousy thing to come home to!

It was 2 a m

Home was 50 miles to the north

I needed a dogsled, but all I had was a 7-year old car.

The lights of Baltimore were soon behind me as I headed north on four-lane highways It wasn't bad going As the night grew darker due to the vanishing of city and highway lights, the view through my windshield appeared even colder than it was - especially since I was the only fool out on the road this early in the morning

Instead of allowing myself to settle way back in the driver's seat, as I usually do, I had both hands on the steering wheel and was crouched forward for whatever advantage that might give me for visibility. Snow was falling and the windshield wipers were flipping back and forth. The beams of my headlights swerved from side to side on occasion as the back end of my Oldsmobile fought for better traction.

Each mile beyond Interstate 83 came as a surprise. The tires kept chewing the snow The headlights kept their aim towards Woodbine. Eventually a point was reached when I boasted: "From here on, I don't care if I do get stuck, I can walk the rest of the way!"

The last half-mile was all uphill. It was 4:30 a m Slowly, but steadily, the car continued to stay on course towards the farm. The familiar sights sure looked friendly all of a sudden. And then there was a most pleasant surprise

There, ahead of me and to the right, was the cow stable with all the lights turned on. Inside was Marvin, getting ready to milk. What's more, he was getting started an hour early.

"I thought you might not get back with the snow and all," the hired man explained matter-of-factly.

"Thanks, Marv, if you were a girl I'd kiss you," I said with genuine appreciation.

Now is the time

[Continued from Page 10]

even presented while the opposing thoughts are presented strongly. When it comes to issues concerning agriculture, and especially land use and the preserving of good farm land, we urge farmers and folks in the rural area to become very active and let officials know their opinions and suggestions. Otherwise, agriculture will continue to be the loser.

TO KEEP IN TOUCH WITH LAWMAKERS

Farmers are usually reluctant to come forward and state their opinion on public issues, whether they concern agriculture or not. However, under present trends and transactions we feel that farmers have every right and actually have a duty to let their legislators and officials know what they are thinking. In many cases the farmer viewpoint is not subject several times over the past few years. However, we still hear of livestock producers who get hurt because they allowed left - over chemicals to get into the hands of children or allowed livestock to get to them. We suggest separate storage buildings or rooms for this material and should never be left on the barn floor, in the garage, or in the feed alley. The livestock industry is at the point for producers where it is very difficult to make much profit on the operation. When these careless losses do occur, it means a greater loss for that enterprise. Pesticide safety is just as important as fire or accident safety. Don't take chances with any pesticides materials.

TRY A CLASSIFIED

FOOD WILL BE IN BIG DEMAND

It will never be outdated. Especially organic food. In the soon coming great depression, vegetables and soybeans will be more economical for the grower and consumer both, than feeding to animals and then eating the animals.

Large distributors will want loads of produce if we can fill their truck at our warehouse. We'll start in June or July or maybe before.

Plant acres of strawberries and dwarf fruit trees at once. Our products will keep them healthy without the serious sprays at least. We have premium organic markets and good partial organic markets. We have good contacts far and wide.

ORGANIC CENTER

381-A East Jackson St.,
New Holland, PA 17557
Phone 717-394-9917 Open Mon. thru Fri.

We have a complete line of fertilizer, various NPK formulas, soil minerals and enzymes which have been lacking; Lactobase foliage spray, Agriserum, Wex, Basic H, seed inoculant (a wonderful new product), garden seeders, dusters, natural insecticides, and electronic seed treatment for bigger roots and healthier crops (more drought resistant). Complete soil test with Cation exchange capacity by NATURE'S WAY FARM in Michigan. More to say. Watch our ads every week or come and see us.

Walker to form consumer group

WASHINGTON, D.C. Congressman Bob Walker this week announced the formation of the "Advisory Congressional Consumer Taskforce" which will consist of one panel in each of the 16th District's three counties.

The "Advisory Congressional Consumer Taskforce", to be known as "ACCT", will aid Congressman Walker and his staff in keeping 16th District residents abreast of developments in consumer related matters and advise him on consumer legislation as it comes before the Congress.

"ACCT is a way of involving my constituents, listening to their particular needs and views which can aid me in representing those views in the Congress.

"Also, I intend to use ACCT and its activities as a basis for my own legislative initiative in the field of consumer protection." Walker said.

"ACCT" will be a citizen-volunteer organization and Walker noted that he hopes it can serve as an alternative to the costly bureaucrat-agency approach often proposed as the only means for government to respond to the individual consumer.

"ACCT" will hold regular meetings with times and places to be determined. Congressman Walker is urging anyone with a desire to serve on an "ACCT" panel or work with the group to contact his Special Assistant For Consumer Affairs, Marc Phillips, at his Park City office, (717) 393-0666.

Jimmy couldn't make the Blue Mt. FFA banquet

Mike Sinitsky (left), John Heim, (center), and Malcolm Eichert (right) won awards at the Blue Mountain FFA banquet for their first place winnings in the county project book contest. Both Mike and Malcolm went on to state competition where Malcolm won a silver medal, and Mike a bronze.

By JOANNE SPAHR

SCHUYLKILL HAVEN, Pa.—Unfortunately for Jimmy Carter, he was busy last Tuesday evening. That was the night the Blue Mountain Future Farmers of America held their thirty-third annual parent and member banquet in the Blue Mountain High School cafeteria. Although Jimmy was invited, he had to send his regrets through his director of scheduling, and in his place, the chapter read his letter to the 250 guests present. They now plan to frame the letter from Carter as a momento of this year's banquet. The reasoning behind inviting Carter is not only that he is president, but that he was an outstanding member of the Future Farmers of America in his youth.

Blue Mountain is one of two FFA chapters in Schuylkill County, and at the present time, has 52 members. Their president is Mike Sinitsky; vice-president—Ed Gruver; reporter—Robert Sauers; treasurer—Kevin Shire; secretary—Eric Werner, chaplain—Brian Heim; conductor—Woodrow Seiders; and advisor—Blair Shaffer.

After the family-style banquet, an awards presentation was held in the auditorium. This year four members of the community were made honorary members of the Blue Mountain chapter for their service to the group during the year. Norman Stein, Orwigsburg; Michael Sinitsky, Orwigsburg; and Robert Scharff, New Ringgold, were cited for donating tractors to the FFA for the tractor driving contest. John Joyce, Pottsville, was honored for donating apples with which the group made apple cider. Cider production is one of the main activities of the Blue Mountain chapter.

Also honored during the evening's activities were seven members in the FFA who have done outstanding work in the group. Mike Sinitsky, 550 Adamsdale Rd., Orwigsburg, the president of the chapter, and Malcolm Eicher - Orwigsburg R1, the group's 1976 Keystone Farmer, were recognized twice for record books. Mike took a first place in Livestock Production on the county level and a bronze in Three Enterprise Production on the state level. His projects are beef, dairy, and wheat.

Malcolm had a first placing on the county level in Ag Sales and Service, and a silver medal in state competition for Work Experience Off the Farm.

John Heim, New Ringgold R1, walked away with a plaque for his first place entry in the county record book contest, as well. His area was Ag Production.

On the state level, Glenn Kimmel, Auburn R1, won a silver medal for Christmas Tree Production, and Kenny Hill, Schuylkill Haven R1, took a bronze medal for trapping.

Glenn Kimmel, (left) a sophomore at Blue Mountain High School, and Kenny Hill, (right) a senior, took top placings in the state project book contest. Glenn took a silver for his Christmas tree project, and Ken won a bronze for trapping.

One of three girls in the Blue Mountain FFA, Arlene Kreager, was also honored on Tuesday evening. She was recognized for her help during the citrus sales in which she sold 115 cases. Arlene is a graduate of Blue Mountain High School, and is presently working on her father's farm at Schuylkill Haven R2.

This year's Star Greenhand is Jim Stein, Orwigsburg R1. He was also one of the seven honored.

One other non-member to receive a gift of appreciation from the Blue Mountain Chapter was Mrs. Paul Eichert. She received a floral centerpiece in honor of being the mother of the chapter's '76 Keystone Farmer.

The featured speaker for the evening was Herman Manbeck, State FFA Chaplain. Herman challenged the members to become very active in their organization—to "stand up and try," and encouraged the greenhands to keep involved in the FFA.

"FFA prepares you for your whole life," he exclaimed, and for this reason, active involvement is necessary.

After a few remarks from school adminstration members and James Shadle, from the department of ag education at Penn State, the banquet concluded.

Jim Stein was named Star Greenhand of the Blue Mountain FFA Chapter at their recent awards banquet, and Arlene Kreager received a plaque for her top salesmanship abilities in the chapter's citrus sales.

HEISEY FARM EQUIPMENT INC.

INVITES YOU TO THEIR FARM MACHINERY CENTER

Featuring

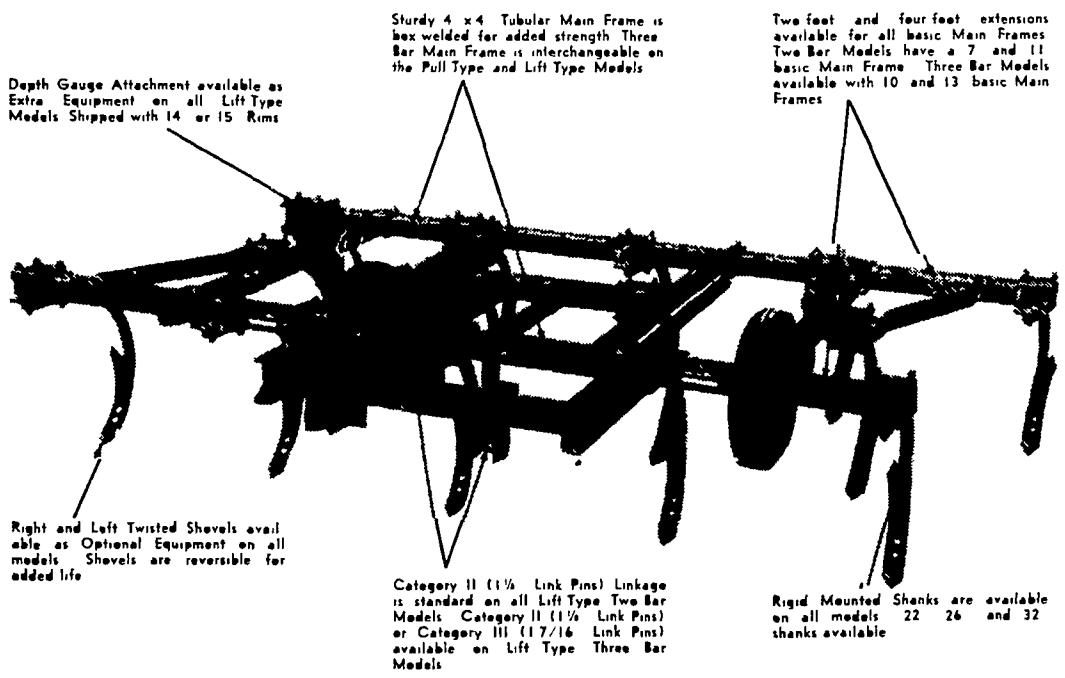
Taylor-Way®

Disc Harrows, Chisel Plows, Subsoilers, Field Cultivators

All are fitted to do the job for a farm of small or large acreage to fit all sizes and makes of tractors

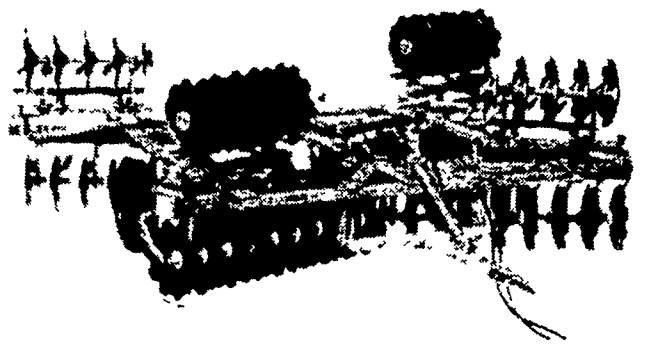
Full Year Warranty on all Equipment

We believe TAYLOR-WAY to be one of the best lines of equipment on the market today

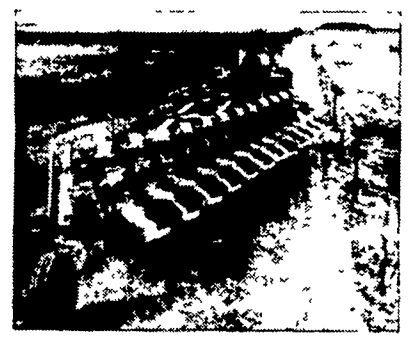


Sturdy 4 x 4 Tubular Main Frame is box welded for added strength Three Bar Main Frame is interchangeable on the Pull Type and Lift Type Models
Two foot and four foot extensions available for all basic Main Frames Two Bar Models have a 7 and 11 basic Main Frame Three Bar Models available with 10 and 13 basic Main Frames
Depth Gauge Attachment available as Extra Equipment on all Lift Type Models Shipped with 14 or 15 Rims
Right and Left Twisted Shovels available as Optional Equipment on all models Shovels are reversible for added life
Category II (1¼ Link Pins) Linkage is standard on all Lift Type Two Bar Models Category II (1¼ Link Pins) or Category III (1 7/16 Link Pins) available on Lift Type Three Bar Models
Rigid Mounted Shanks are available on all models 22 26 and 32 shanks available

Fold over Wings for transporting or more weight per disc when plowing in tough soils.



Kverneland plows



in any size for any demand

Mounted
Semimounted
On-land
Pull type
Reversible

KVERNELAND

With automatic reset bottoms for Non Stop Plowing

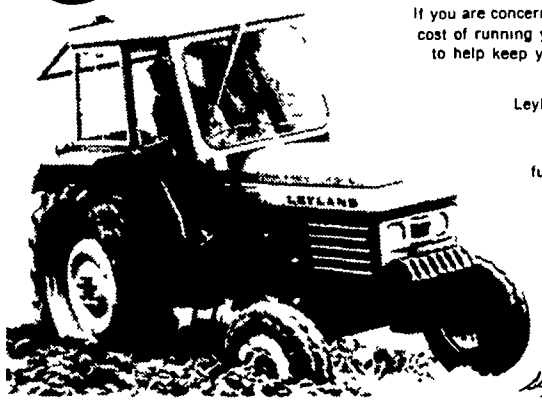
Saves time, cuts fuel cost,

The simplest and most efficient reset on the market

- *Smooth quick and reliable*
- Non hydraulic and few moving parts
- Any number of bottoms can be lifted out of work and put in the "park" position
- A variety of bottoms for trash plowing, corn stalks, general sod and stubble
- Over 20,000 plows in use in North America today

Leyland Tractors Diesel

The start of a new era



If you are concerned about constant increases in the cost of running your farm look closely at Leyland to help keep your costs in line

Leyland Tractors give you lower initial cost all purpose hydraulics more versatility high torque engines, fully independent PTO gear ratios for your needs simple low cost maintenance and great dealer back-up on parts and service

We invite you to compare these fine tractors with any others in their class before you buy and be satisfied for years to come

Signed Farming from 25 to 11, 17

STAR QUALITIES IN LEYLAND ★ Excellent serviceability
★ Big performance plus economy ★ Geared for the job
★ Excellent operator comfort and convenience
★ All purpose hydraulics ★ Quality at a price you can afford.

LOOK AT LEYLAND THEN COMPARE!

GT Tox-O-Wik Dryers

Model 270 — 250 bu cap
Model 370 —350 bu cap
Model 570 —500 bu cap

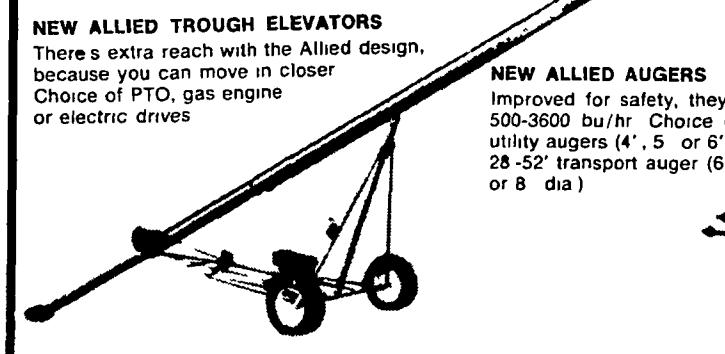
Two Basic Processes are involved in drying grain with a GT TOX O WIK Recirculating Batch Grain Dryer These two processes function independently yet simultaneously to dry grain as evenly and gently as possible

One of the Processes is the movement of the grain itself The round bin and cone shaped bottom are a part of the GT TOX O WIK Dryer design for making this process more efficient The patented agitator arms keep the grain constantly moving downward As the grain reaches the bottom it is picked up by the recirculating auger which carries it to *the top of the dryer and discharges it back into the dryer*

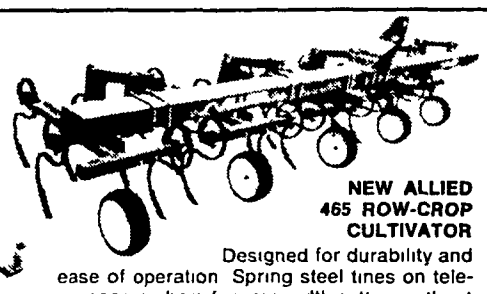
The Other Process involved in drying is the movement of the heated air Heat from the burner combines with air supplied by the fan This heated air is then forced into the plenum chamber and out into the moving grain

The GT TOX O WIK Dryer simple in design and operation is built of high quality materials and factory pre tested for years of trouble free drying It s your assurance of dependability and service for years to come

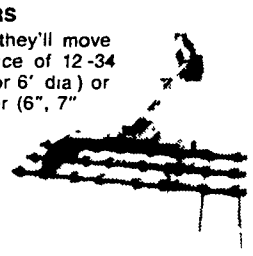
NEW ALLIED TROUGH ELEVATORS
There s extra reach with the Allied design, because you can move in closer
Choice of PTO, gas engine or electric drives



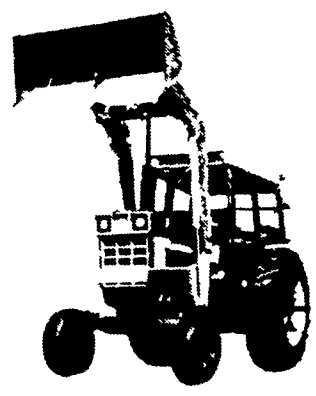
NEW ALLIED AUGERS
Improved for safety, they'll move 500-3600 bu/hr Choice of 12-34 utility augers (4', 5 or 6' dia) or 28-52' transport auger (6", 7" or 8 dia)



NEW ALLIED 465 ROW-CROP CULTIVATOR
Designed for durability and ease of operation Spring steel tines on telescoping bars for row width setting without tools 4, 6, 8, or 12 row models Optional folding wings available



FOLLOWING HARROW
Adjustable spring tines give deep penetration, vibrating action for superb seedbed preparation Mounts to tillage tools with single, heavy 2½ square carrier arm With solid or wing-type frames



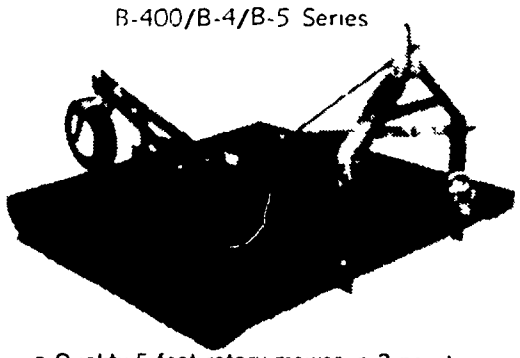
ALLIED SERIES 60 QUICK-LATCH LOADER
Latches permit mounting/demounting in seconds Choose five tine or combination buckets, grapples, tines, dirt plates etc for a variety of jobs Fits over 200 tractor models

We are a dealer for the complete line of equipment and parts distributed by Allied Farm Equipment. The above items plus many other items are all distributed by Allied which now has a warehouse in Harrisburg. It will pay you to contact us before you buy. Take time to look this equipment over.

BMB

the **LOW COST!**

B-400/B-4/B-5 Series



- Quality 5 foot rotary mower in 3 point *lift and trail type models*
- Needle bearing type U-joints heavy duty gear box, rugged construction
- Heavy rotor bar, free swinging, spring steel knives Flywheel optional
- Hot rolled steel formed and welded *main housing*
- Full length runners • Swept-back front
- Shear pin drive

Farmers challenge

(Continued from Page 1)

and highways. The bill was never passed but has emerged again within the new legislature. The Barley case will undoubtedly have an impact on the results of this year's voting on the bill.

In reviewing their case with Lancaster Farming, the Barleys indicated that they had at one time seriously considered selling the entire farm to LARA. "We thought we had no other option," Mrs. John Barley said. LARA didn't take the offer the Barleys made. More recently the Barleys have taken the position that maybe they can fight eminent domain after all. That's what's happening now, with the majority of Lancaster Countians standing firmly behind them.

Abram and John Barley have been on this farm for 15 years. As one of the largest dairy farms in the County, they produce 16,000 pounds of milk per day. The landfill annexation would take a portion of their cropland which runs adjacent to their 380-stall dairy barn. In years to come, the LARA people may choose to take that too, especially if they're successful in taking the acreage they're after now. "We'll never be able to replace what we have here," said Mrs. Barley.

LARA officials say that it they don't get the 58-acre tract of land, their present landfill will be exhausted by 1981. With the 58 acres added on, they may be able to continue for another five years. Officials for the Refuse Authority also say they have no alternatives without raising the costs of trash collection considerably.

But that hasn't disturbed the general public too much, if at all. Of all the sentiments expressed to the Barleys and area newspapers, public concern is strong over losing more good farmland. Nobody is alarmed over having to pay more to have their trash hauled away.

LARA does have alternatives open to it, insist opponents to the landfill idea. A landfill on the Chester County line, near Honey Brook, is taking in 50 tons per day. It has a capacity to take 3000 tons daily. That 525 acre landfill site is said to be one of the largest on the East Coast. According to John Barley, his farm is 18 miles from Lancaster, the Honey Brook landfill is 24 miles away. He's doubtful that the slightly greater distance will make much difference since the roads in that direction are so much better. Barley, who recently visited the Lanchester Landfill, said that site is huge and very well planned. The site adjacent to his farm has craters and mounds all over it which are visible from far away. Trash often blows out of the deep scars in the soil, said Abram Barley, as he pointed his finger at debris caught in nearby trees and bushes. The Barleys are concerned over having that debris and large amounts of dust blow into their dairy if and when the landfill moves right next to the barn.

Manor Township supervisors will meet Monday night to discuss the issue in greater detail. A special meeting has been set for March 23 as well. The latter meeting is expected to draw a crowd, as is the event on Wednesday which gets underway at about 10 a.m.

CALMING THE SEAS

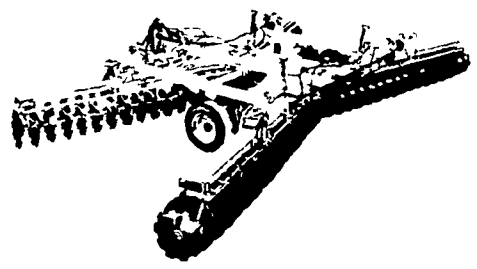
And, behold, there arose a great tempest in the sea, insomuch that the ship was covered with the waves, but he was asleep

And his disciples came to him, and awoke him, saying, Lord, save us we perish

And he saith unto them, Why are ye fearful, O ye of little faith? Then he arose, and rebuked the winds and the sea, and there was a great calm

St Matthew 8: 24-26

Secret to long life superiority? Unit-built disk gangs



International Disk Harrows

Unit-built gangs help make our disk harrows the strongest of any Big, square spring-steel arbor bolts are high-torqued to make a rigid, exceptionally long-life assembly of the cast spacer bearing spools and blades Crimp center blades mean long wear, less breakage Triple-sealed self-aligning bearings are rubber mounted so they are free to flex in their housings to absorb shocks Bearings mount on wide steel sleeves that spread bearing loads over a wider area to virtually end arbor bolt breakage

- Massive main frames—structural steel welded into rectangular tubing
- Extra-strong structural steel gang bars keep disks cutting gangs in alignment
- Unit-built gangs on all IH disk harrows mounted, wheel controlled tandems and wheel-controlled offsets All are available in a wide range of sizes and subtypes

Think more corn profit/acre. Think Unipel® 20-10-10 fertility.

Across the Corn Belt, more and more farm operators know that a corn fertility program including Ortho's Unipel 20-10-10 pays off consistently with higher corn profits per acre

Late Winter and early Spring preplant applications of Ortho Unipel 20-10-10 have helped increase returns over fertilizer investment up to $86 an acre more than blends .and up to $40 an acre more than a liquid program.

Five key ingredients in each pellet of Unipel 20-10-10 benefit corn with an uninterrupted season-long flow of Nitrogen, Phosphorus and Potash Both Nitrogen and Phosphorus are present in quick and sustained feeding forms to provide both immediate and continued nutrient feeding And adequate Potash rounds out the balanced Unipel diet to develop strong roots, sturdy stalks and leaves

You can make unique, pelleted Unipel 20-10-10 your complete corn fertility program, or just part of it, depending on your yield goals and soil conditions

We'll recommend the best Unipel fertility program for you to make the big difference in your corn profits per acre

Fertilizer adequate,

Continued from Page 1

continent could be a real problem. The Canadian government has, for example, tightened its restrictions on phosphorus exports. Most of the phosphorus used in the United States comes from our northern neighbor. While price increases in that area are sure to come, they aren't likely to trickle down to the farmer until late Spring or next Fall, Burton said.

Due to the extremely hard Winter, the transport of fertilizer from one area to another has been anything but on schedule. Barges loaded with grain were frozen into immobility on many of the nation's rivers and lakes. There's also a shortage of railroad cars. Transportation is the major concern being expressed right now by fertilizer manufacturers and handlers.

All things considered, however, Spring planting is expected to go smoothly. The big factor is the weather. Should any one region have a delay in its planting season, thereby throwing it into competition with other regions, the fertilizer may not be able to move into various directions fast enough. But if manufacturers and distributors can start their normal pattern in the South and gradually move northward, the supplies and movement should hold steady.

A check with other manufacturers reveals nearly identical situations. A spokesman for the Agrico fertilizer outlet in Ephrata says supplies are good, prices are stable to possibly a little lower than last year, and that no problems are foreseen. If a shortage does arise, it would probably be with nitrogen, due to the gas curtailments. "The bins are full and we're waiting for the ground to dry," said the Agrico spokesman.

Adequate supplies are also reported by Chemgro at East Petersburg. Timely shipments are thought to be the only possible hitch. Prices are a trifle higher than a year ago.

Agway says its prices are similar to last year's and supplies are sufficient enough to dispel any concern over running out. The same verdict came from the Farmers Fertilizer Works in Elizabethtown.

The Reading Bone Fertilizer Co. reports that their movement of fertilizer has been "excellent" during the last half of February. "It was really more than we expected," the firm's newsletter announced this week. Spokesmen for the firm also indicate that "the more fertilizer we can move preseason, the better chance we have for refilling at reasonable prices and even securing all we need." They're encouraging farmers and handlers to find storage room on their own farms or warehouses. The firm reported an increase of $5 to $6 per ton, which they say reflects only half of their increased costs for raw materials. More increases are anticipated this month. Those increases are at the wholesale level and will ultimately show up in increased retail prices.

Surveys of planting intentions show that farmers are intending to plant about the same number of acres this year as they did in 1976. Soybean plantings are taking a bit of a jump, however, due to the shortage that's been evident since the last crop was harvested. Fertilizer usage is expected to be up too, but if the season progresses in an ideal pattern, there aren't likely to be any problems.

Veterinary column added

[Continued from Page 1]

practice in southern Lancaster County soon after graduation, and after he had achieved a modest start in dairying. He has been involved with farming for all of his life and over the years has built up a herd of 170 registered Holsteins of which 70 are milking. Renting several tracts of land in the Quarryville area, Troop's operation is known as "Pennstar Farms."

The southern Lancaster County veterinarian became interested in writing a veterinary column for **Lancaster Farming** because, in his words: "There are so many things I see in my day-to-day practice which the farmer should be made aware of. Besides giving them information on the farm on a one-to-one basis, I believe it can also be done through newspaper articles."

The aims of Troops' writings will be to correct potential problem situations and increase profits for the farmer.

Reader responses may have a bearing on subject matter, but Troop is not setting his column up as a direct question and answer affair. Instead, he will concentrate his comments on seasonal factors to watch for in order to prevent or minimize problems.

Dr. Troop's memberships in professional organizations include Holstein-Friesian Association of America, the Pennsylvania Farmers Association, the American Association of Bovine Practitioners, the Pennsylvania Holstein Association and the Conestoga Veterinary Medicine Association. His practice is limited to large animals, particularly dairy cattle.

The new veterinary column will regularly appear on page 16.

York youths kick off 4H- year

YORK, Pa. - During March 7-12, York County 4-H Clubs are "Kicking - Off" another 4-H year. Throughout March, 4-H'ers will be busy selecting projects to work on during the year.

The backbone of 4-H club work is the project. Each member selects his own projects. "Learn By Doing" is the concept used it 4-H project work. Although the members receive counsel and guidance from volunteer adult leaders and parents, the value of the finished project is up to the individual. Upon the completion of the project, it is exhibited at a county - wide round - up and judged.

The County Kick - Off Week will be climaxed on Saturday evening, March 12,, with a Family Fun Night. All members of the family are invited to attend. A covered dish will begin at 7 p.m. After the meal, square dancing, bingo and other activities will be available to participate in. One of the highlights of the evening will be the Selection of posters to represent York County at the State Poster contest. The themes for this year's contest are: 4-H, The Sound of Youth, 4-H, Where The Action is and 4-H Gets Involved. Last year the county contest attracted 65 entries which included the state winning poster by Sue Schneider, R No. 1, Wellsville.

For more information about the 4-H program, contact the York County Extension Service at 848-2101. The office is located in the basement of the Court House.

Neighbors pitch in after barn fire

By JOYCE BUPP
York Co. Reporter

AIRVILLE, Pa.—Every farmer worries about it. To most, it never happens. To a small percentage, it does. The Ellis Crowl family, Airville R2, has joined that tragic percentage.

Twelve-year-old Gary Crowl was home from school on February 14. About 2:30 p.m., he glanced toward the barn and saw the telltale wisps of smoke. Alerting his mother, the two quickly chased heifers away from the barn area.

The phone lines were already burned off by the time Joyce Crowl tried to call the fire department. She raced to a neighbor's house to use their phone. Ellis was on business at Joyce's parents' home, and drove the two miles to his property he recalled later, "doing 90 miles an hour."

But by the time he drove in the lane, the barn was engulfed in flames. He tried several times to chase out four remaining hogs which were determined not to leave the pens, and at the last moment, he finally succeeded.

The barn had been built in 1935; and, at 120 by 100 ft., it was one of the largest in southern York County. In less than an hour after the first smoke had been seen, it lay in a collapsed pile of smouldering hay and broken black timbers.

Before sunset, neighbors, unasked, began appearing. Some came to chase the 60 loose heifers back into makeshift pens in the Crowl's recently completed new dairy barn. Others loaded homeless hogs onto trucks and took them to auction. And down the road came the first of the seven loads of hay shared by neighbors in the first week.

"Whenever anyone needs help, the Crowl's are the first to be there," explained Kathy King, Delta R2. "We all wanted to be a part of helping them after the fire."

Then, a week later, neighbors turned out in full force for a massive clean-up effort.

"I just don't know how many are here," offered Crowl, emotion telling in his voice. "There's no way we can name them all or thank them as we'd like." An unofficial count by a member of the kitchen crew at lunch tallied 28 men, 13 women, and a few youngsters accompanying their parents. Neighborhood farm women had piled the table full three times to feed the soot-blackened shifts of workers.

The volunteers brought with them a full line of heavy duty equipment to make the cleanup assembly-line efficient. Nine large dump trucks roared over the lane, carrying away loads of the debris. Two bulldozers knocked down scorched and sagging walls, scooping the ashes into the waiting line of trucks.

By late afternoon, all that remained was the smoke-stained foundation, a charred and partially cracked cement stave silo, and clusters of the remaining workers completing final clearing away chores. But as remnants of the old barn disappeared, the determination of the Crowl family to continue on their dairying operation grew.

Hay for the cattle remains a concern. The Crowl's had been buying hay all winter and saving the more than 200 tons in the barn for Spring feed when hay prices would rise. Every bale put up last summer was lost. Only a very tiny amount of three-year-old hay in a distant storage barn is left.

But perhaps the saddest aftermath of the tragedy is the loss of seven registered Holstein calves. The calves, July and August born, were being groomed as potential 4-H and FFA project calves for the three Crowl sons, Leon, 17, Glenn 15, and Gary. How the calves will be replaced, or if project replacements can even be found, is the major concern for the young men.

A farmer works hand in hand with fate and faith. Fate has dealt a harsh blow to the Crowl family. Faith, bolstered by the kindnesses of neighbors and friends, will see them through to rebuild anew.

Outlook conference evaluated

WASHINGTON, D.C. - The people who attend the National Agricultural Outlook Conference feel they get "significant" information from the meeting, but they would like to see some changes in future sessions.

Changes suggested by conferees include a tighter grouping of topics, more on water and irrigation, energy, weather, the environment, instituitional constraints on agriculture and more on legislative developments. Conferees would also like general sessions of the outlook conferences to assess the impact of domestic and world developments on individual commodity markets.

These and other comments were contained in an evaluation of the Outlook Conference by people who attended the session last November.

Postmortem exams

[Continued from Page 15]

postmortems on them to supplement the lab's findings. This, again, will help to solve the dilemma of whether the birds being brought to the lab are indicative of a flock problem or if they have incidental occurrences of other diseases.

Poultrymen also need to evaluate their vaccination programs, according to Eckroade.

"Your vaccination program may work fine until there is a problem of infection or threat of infection," he stated. So, he emphasized that in the near future, he hopes the New Bolton Center laboratory will be able to offer challenge tests so that vaccination programs can be evaluated to be sure they are effective.

Eckroade then went into a discussion and review of postmortems. Some highlights he discussed were that 1) a post-mortem exam should include good birds as well as sick birds for a more accurate diagnosis of the problem, 2.) any birds posted on the farm should be disposed of properly, and 3.) at any time when entering a diagnostic lab, the poultryman should consider himself a carrier of an infectious social disease and take proper precautions such as changing clothes and shoes, and washing properly before entering his own poultry houses.

On the point of contamination, Eckroade stated emphatically that all poultry producers should be on guard for other people exposing their birds to contaminants.

"They have no business dragging disease into your birds," he emphasized, "You don't owe them that."

During the review of postmortem operations, Eckroade also made special note of an organ entitled the "bursa." This little organ lies near the end of the digestive tract and produces the cells that will later produce antibodies.

Right now there is a recurrence of bursal or Gumboro disease. Originally, bursal disease first came to the attention of producers and veterinarians in the 60's when it affected poultry from three to six weeks old. That particular disease subsided and as a result, the research workers stopped work on the project.

Only recently have breeder flock - related problem chicks been tied to that disease, and, therefore, it is again under study.

Eckroade explained that the problem first begins in day-old chicks. These young birds, if put into a contaminated house, can't combat the infection because their parents didn't have an antibody against the virus. Once infected, the bursa is essentially destroyed and the chicks won't be able to respond as well to vaccines or to resist infections, so, as Echroade put it, "You're going to have chicks with lots of problems after that."

The best way farmers can combat the problem is to identify the problem chicks through lab diagnosis and keep their eyes and ears open for the information which will be coming out over the next few months.

In a discussion period before he stepped down from the podium, Dr. Eckroade expressed one more concern with the poultry producers. It has come to his attention that unclean paper egg flats are being reused in various egg operations. Considering his concern with contamination, this fact has him alarmed.

"Those egg flats could be coming from anywhere, and if I were you, I'd be unhappy about the situation," he proclaimed.

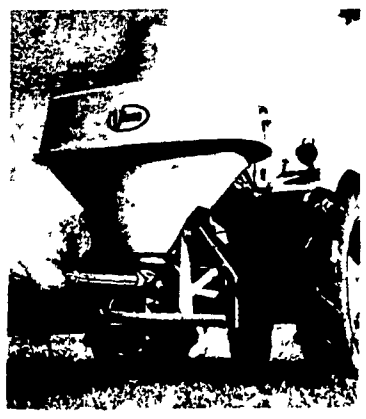
A solution he suggests is going to plastic flats or demanding clean flats. He did say that the industry is doing a fine job with disinfecting chicken coops and trucks, but warned, again, that something should be done about dirty paper flats.

IH dealer receives 'XL' designation

Don Kline, second from left, president of Schoeneck International Equipment Co., receives a letter from International Harvester Co. designating his firm as an "XL" dealership. Presenting the award is Bernie Boggs, regional comptroller for International. Looking on are Hal Keeler (left), manager of Schoeneck; and John Baldwin, district manager for International Harvester. Kline and Keeler also received individual awards for their efforts in meeting the "XL" standards for their Lehigh Valley firm.

Vicon fertilizer spreader

The most accurate fertilizer spreader you can buy



The Vicon Spreader uses an exclusive fast-action spout moving back and forth at 540 times per minute to give even, rectangular coverage instead of the usual circular pattern
That means increased profit because you get uniform fertilizer coverage, resulting in better stands and higher yields

Give the Vicon fertilizer spreader a try. It costs no more than others. But it's better.

Poultry seminar

(Continued from Page 1)

centered around recent studies that both had done with egg shell problems. One supplemented the other with Bezpa centering on the causes of egg shell damage, and Birth on the solution to the shell breakage problem.

Basically, through recent statistical studies including an eight-state field study, Bezpa has found that the average amount of eggs either cracked or broken in the northeastern region of the United States is 12.15 per cent, with 50 per cent of the farms having over 10 per cent damage.

Exclaiming over the high cost poultrymen pay for this 10 per cent damage, Bezpa brought home his point by breaking it down into size of flock and dollars lost.

Using the industry average of 240 eggs per bird per year, and the 15 cent spread between the cracked egg market and the sound shell market, the total comes to 30 cents per bird lost per year. In other words, if a poultryman raises 30,000 birds, he will lose $9,000; if he raises 60,000 birds he will lose $18,000; and if he raises 100,000 birds, he will lose $30,000 per year.

"These are not fabricated figures," claimed Bezpa, "these are accurate."

Another way to break down the monetary loss due to egg shell damage is to compute it in dollars per day.

Kermit Birth

In a flock where the average amount produced is 53,000 eggs a day, (75,000 birds) there is an $80 - $100 loss daily with 10 per cent shell damage.

Many factors influence the cracking of the shells. Thickness, size, shape and condition of shell all play a part as well as management, equipment, egg movement, handling, number of insults to the shell, aging, nutrition, and health of the bird.

Bezpa, however, was primarily interested in how the eggs became broken on the way from the hen to the carton in the first of two studies he cited. In the field study it was pointed out that 3.83 per cent of the breakage occurs at point of lay. The reasons for this could be cage design, number of birds per cage, the position of the birds in the cage, the laying behavior of the birds, and the number of eggs on the belt. Age is also a factor. According to Bezpa, the percentage of breakage increases each month by ½ of one per cent as the bird gets older.

Another important factor in the high incidence of egg shell damage is the machinery involved, and the conveyance of eggs from one point to another.

"As long as the belt are level, from one point to another, and you have the proper flow of eggs on that belt, you can convey eggs from Lancaster to Reading and not incur any breaks," Bezpa pointed out. Straight line travel under good conditions turned out to be relatively stress-free for the eggs

However, when eggs are taken from one elevation to another, or when the directional flow of eggs is changed, as at a corner, then breakage will be higher.

Dr. Stan Smith

"At a corner, occurrence of breakage depends on the quality of the shell and the number of eggs on that belt." At one operation used in the field study, the incidence of breakage was as high as seven per cent at the corners of the conveyor.

Bezpa stated that through the study, the researchers did find out that the way to eliminate breakage at corners is to blend the size of eggs.

"If you're conveying eggs from an old flock, it's a good idea to mix it in with eggs from a young flock - then you have large and small eggs," Bezpa explained.

One surprising result of the study came when the researchers looked into the affects of the washer on breakage.

"We thought there would be an awful lot of breaking occurring with the washing of the eggs, but we found less than ¾ of a per cent," he said. Thermal cracks were found from putting 50-55 degree eggs into a washer that is 110 degrees.

"You run into thermal checks that way," noted Bezpa.

A total summary of the study showed that less then five per cent of egg shell damage occurred from the cage to the cooler, and about half occurred in the processing.

Kermit Birth went on to qualify some of the points which Bezpa had made. He asserted that while an egg may crack anywhere along the line from producer to consumer because of stress put on the shell, the primary cause of that egg breaking

John Bezpa

probably occurred at the point of lay.

"An egg shell may get as many as 30-plus stresses on it," he explained, "and somewhere it's got to give, but the actual cause of the break may not be the principle cause. A lot of those problems start where it rolls out of the nest," he concluded.

He gave a few techniques of finding the problem in a system that is cracking or breaking shells. He said to first look at the location of the damage and the point of impact. Also, it is important to look for patterns. And, when further evaluating shell damage, make a list of where the eggs are stressed on the machinery. Then, once the list is made, code them, and go over the systems a few more times, listening and looking for more stress points. Then, if the cracks are occurring where they really shouldn't, go back to the point at which they roll out of the nest and check there for the problem there.

Poultry Nutrition

Dr. Stan Smith, Agway, New York, spoke on the second topic of the program. His area of expertise was nutrition and the importance of the different variables in the chicken's diet. He stressed that due to the poultry now being confined to the cage, the diets which producers give them must contain all the nutrients necessary for healthy egg production, because the birds can no longer go elsewhere to fend for themselves as they once did. And, one nutrient that Smith stressed as being of key importance is water.

"Just mistreating water can knock your production about as fast as anything," he asserted, bringing to focus the point that if a producer wants to bring a bird down in production, he removes the water and feed.

A bird needs about one pint of water for every large egg produced. Smith advocates having a waterer on each partition so if one is faulty, thebird has access to another waterer.

He went on to explain other nutritive elements and how they affect the health of poultry as based on his own research and the findings of others in the field.

Following the meeting, all participants were invited to talk with the speakers and examine a candling display which Birth provided

Amish taxis may need insurance

By DIETER KRIEG

LANCASTER - The controversial issue smoldering at the present time between the Public Utilities Commission and "Amish taxi" operators could be a blessing in disguise, according to State Representative Gibson Armstrong who has kept a close eye on the matter.

The reason is a twist in insurance policies which would automatically void any vehicle owner's coverage who uses his car or van for transporting the public. Some of the "Amish taxi" owners and operators are conducting their services under just such circumstances. The reason for nullification of policies is because different insurance rates apply for publically hired vehicles, including "Amish taxis." All that is needed to correct the matter is for such vehicle owners to not conceal their true status. Otherwise insurance policies ceases at the moment of the accident, says Armstrong. The present controversy may cause operators to seek proper insurance coverage.

"This whole thing (controversy over unlicensed taxis for the Amish) may be very worthwhile after all," Armstrong told Lancaster Farming on Friday morning. "If we can prevent a lawsuit from happening, it will be a good thing," he added. "The Amish would not sue, but what about the other guy," he asked.

Armstrong advises unlicensed and uninsured owners of the so-called Amish taxis to notify their insurance companies of the fact that their vehicles are up for hire. He stresses that such vehicle operators may think they're insured, but they're not when they're involved in an accident while carrying paying passengers.

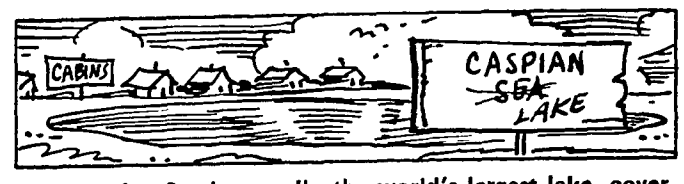
Higher insurance rates will be applicable, Armstrong informed, but those expenses will be offset by the fact that this item then becomes a deductible expense. Also, a PUC licensed vehicle operator does not have to pay the state sales tax on his vehicle.

A meeting was held on Tuesday night in Refton during which an estimated 200 people came to hear both sides of the dispute. Most of the drivers involved are well meaning and perhaps unaware of the laws or insurance specifications, speakers pointed out. The Amish expressed concern over what all this may mean to future transportation services to them.

According to Armstrong, the Amish people themselves will not be affected too much, if at all.

He is still hopeful that the PUC will grant some sort of exemption to Amish taxi operators, but urges prompt and proper insurance coverage.

The Lancaster County representative also said he expects the PUC to come out with another statement in the "very immediate future," possibly this weekend. As of Friday morning the PUC had not acted. The present status is that a 30 to 90 day "cooling off" period has been granted to permit involved drivers to register with the PUC.



The Caspian Sea is actually the world's largest lake, covering an area of over 343,000 square miles.

Target prices set

WASHINGTON, D.C. - Secretary of Agriculture Bob Bergland has announced the 1977 target prices for wheat and feed grains.

Current legislation requires that target prices be adjusted from 1976 levels to reflect the increase in the index of prices paid by farmers for production items, interest, taxes and wage rates during 1976 as well as changes in the three-year moving average of yields for each crop.

The 1977 target prices are as follows: wheat - $2.47; corn - $1.70; barley - $1.39.

Target prices represent a floor price that eligible producers may receive for their crops. If the national average market price for the particular crop falls below the target price, a deficiency payment is made equal to the difference between the target price and the market price. Deficiency payments have never been made on wheat, feed grains or upland cotton in the four years of the program.

Target prices are also used as a base to determine disaster payments should a natural disaster strike and eligible producer's crop. Under such circumstances, disaster payments are paid if the producer is prevented from planting a crop or if yields are substantially reduced. The disaster payment rate is generally one-third of the target price for each commodity.

The Department also said that the 1977 loan rates it announced Oct. 13, 1976 for wheat, feed grains and soybeans are being reviewed and a decision on final loan levels for these commodities will be announced at a later date.

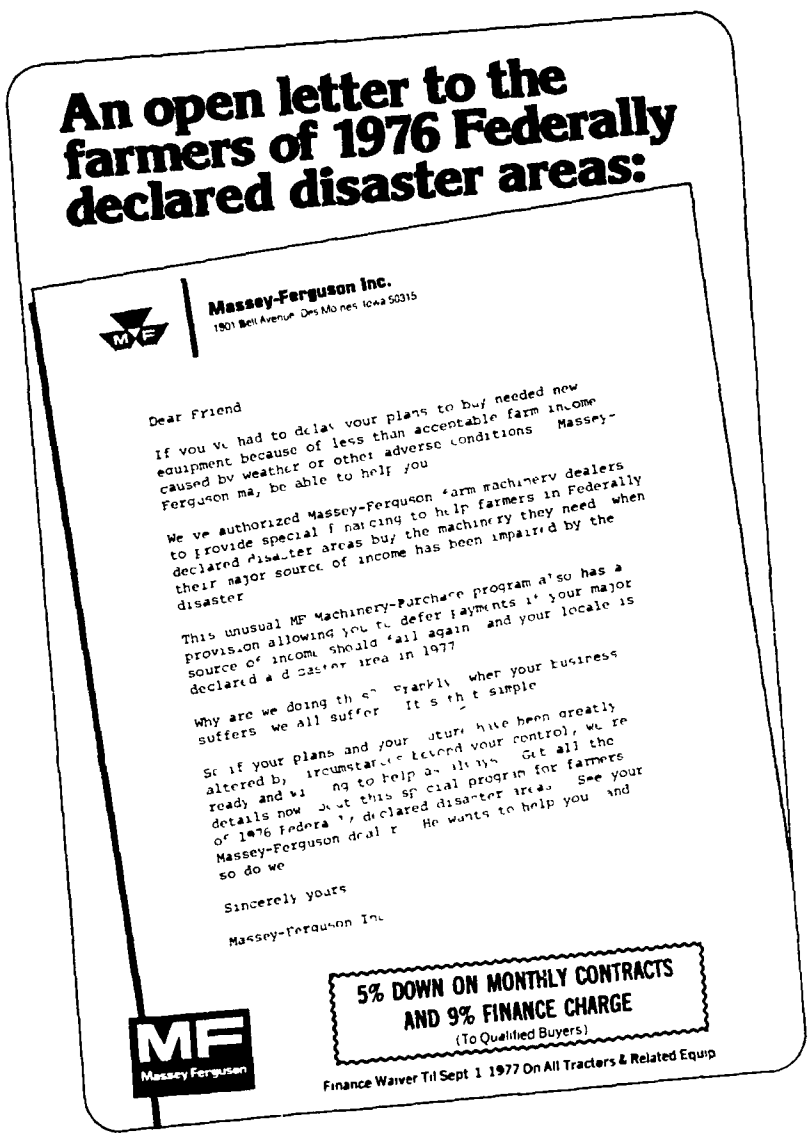
An open letter to the farmers of 1976 Federally declared disaster areas:



Massey-Ferguson Inc.
1901 Bell Avenue Des Moines Iowa 50315

Dear Friend

If you've had to delay your plans to buy needed new equipment because of less than acceptable farm income caused by weather or other adverse conditions Massey-Ferguson may be able to help you

We've authorized Massey-Ferguson farm machinery dealers to provide special financing to help farmers in Federally declared disaster areas buy the machinery they need when their major source of income has been impaired by the disaster

This unusual MF Machinery-Purchase program also has a provision allowing you to defer payments if your major source of income should fail again and your locale is declared a disaster area in 1977

Why are we doing this? Frankly, when your business suffers we all suffer It's that simple

So if your plans and your future have been greatly altered by circumstances beyond your control, we're ready and willing to help as always Get all the details now about this special program for farmers of 1976 Federally declared disaster areas See your Massey-Ferguson dealer He wants to help you and so do we

Sincerely yours

'4-H - It ain't all cows and cooking'

By JOANNE SPAHR

LEBANON, Pa.—The brightly lit, towering marquee at the entrance to the shopping mall blurted out, "4-H—It ain't all cows and cooking," to the passing motorists at the Boscov's Mall in Lebanon this week. Any curious motorist or shopper who decided to take the bait and see what it was all about, would drive in, make his way to the center mall door, and cautiously open it, only to find a delightfully cute cartoon cow and Pat Krall, Lebanon County Extension 4-H agent, positioned at the information desk just waiting to greet him. And, just two side glances up both directions of the mall would excite that curious passerby as he saw the wonderland of 4-H displays which popped up along the whole length of it. There were 48 displays in all to tickle shoppers' fancies, including live animals for all non-farmers (and farmers, as well) to enjoy.

4-H agent Pat Krall explained that this was the first year for Lebanon County to try a 4-H mall promotion and that it was done mainly as as educational tool because many of the leaders were finding out that people still think of the organization as cooking and cows and only for farm kids.

"We're at the beginning of another year of activities for many clubs, and this is also a good way to get some new people," she explained. Mrs. Melvin Noll, Lebanon R5, who was helping Miss Krall on Wednesday night, and who is a 4-H leader and mother of three 4-Her's herself, also explained that they were also hoping to encourage some people to become leaders.

"We always want to recruit leaders," she explained with a smile.

So, they went all out.

Somebody always has to get his nose in the act, but this little fellow, Jonathan Hunsicker, of 744 Guilford St., Lebanon, who is three years old, got his who face in the picture when looking at a calf during the 4-H mall promotion at Lebanon.

This marquee led motorists into the Lebanon Valley 4-H Mall display.

This is just one of the displays that lined the Lebanon Valley mall this week for Lebanon County's 4-H mall promotion:

Forty-eight displays were planned and erected, and each night, except for Tuesday, activities and demonstrations were put on for shoppers to enjoy. On Wednesday evening, knife care and stamp collecting demonstrations were held, and the evening's entertainment was folk dancing; Thursday sported animal demonstrations; Friday featured small engines and scherenschnitte demonstrations and a clothing project revue; and Saturday promised a dog obedience demonstration as well as flower arranging and geology shows.

And, of course, each night featured the entertainment of enjoying the displays—36 of which were created by 4-Her's themselves. Just a sampling of some of the topics covered were: philately, rocks, electronics, pet care, poultry, creating with line and texture, plant care, rocketry, forestry, entomology, conservation, woodworking, sewing rabbits, and livestock.

Of course, as always, the livestock displays were the center of the most attention.

Said one shopper when she caught her first glance at a Light Brahma show bird, "Bill, come look at this, this chicken has shoes on." Another said of a small calf which was on display, "Gee, that's cute—it almost looks like a little deer, doesn't it?" And Daryl Balmer, whose brothers, Allen and Dale, owned the pet rabbits on display, said that people had been stopping to pet them each night.

There were also a few problems involved with the mall promotion as well as fun. For instance, many of the 4-Hers' projects had to be dug up out of storage places after they'd been put away last year, and there were people like Megan Williams of the North Cornwall Trail Blazers, who was scheduled to give a horse demonstration and who wasn't quite sure where she was going to put her horse for the whole thing.

But, all in all, the 4-H'ers agreed that they had fun, and there was no doubt that they drew attention to themselves, which is what the promotion was all about.

Federal rural loan program detailed

HARRISBURG - Pennsylvania Agriculture Secretary Kent D. Shelhamer said Tuesday that his department would work in close conjunction with the Farmers Home Administration (FmHA) of the United States Department of Agriculture to assure farmers and rural residents in Pennsylvania awareness of loan programs available to them. Shelhamer made the statement following a meeting between officials of his office and a contingent from the Pennsylvania FmHA office headed by the federal agency's Pennsylvania director Penrose Hallowell.

Shelhamer noted that FmHA's loan programs covered a wide range of possibilities and that public knowledge of the programs would be "a plus for every farmer and rural resident in the state."

The Columbia County farmer indicated that his department would be "more than happy to help FmHA disseminate information about its fine loan potentials." He said that anyone interested in finding out facts about the FmHA programs could work through the agriculture department's regional offices or through the Harrisburg headquarters, in addition to working directly with the FmHA offices.

Shelhamer issued a brief outline of the kinds of loans FmHA deals with:

Farm Ownership Loans - generally for family farmers who may use funds to enlarge, buy or improve farms, as well as to refinance debts. In some cases, loans may be utilized for non-farm enterprises to help supplement farmer income.

Farm Operating Loans - these funds, generally designated for family farmers, may be used to pay for items necessary to the success of a proposed operation, such as livestock, farm equipment, fuel, fertilizer, and for minor improvements and certain non-farm businesses

Shelhamer said that literature detailing such information as interest rates (usually quite favorable), eligibility and procedure in applying could be obtained through his department or through FmHA.

Other types of available loans include:

Emergency Loans - to be made in counties where property damage or severe production losses have occurred as the result of a natural disaster and the area has been designated eligible for assistance. Farmers, ranchers and aquaculture operators are largely eligible.

Emergency Livestock "Line of Credit" Guarantees - these are FmHA guaranteed loans made by legally organized lenders to farmers and ranchers in the livestock business to maintain operations during temporarily adverse economic conditions.

Soil and Water Loans - the FmHA makes these loans and provides technical management assistance to owners or operators of farms and ranches for developing, conserving and making proper use of land and water resources.

Business and Industrial Loans- to further business and industrial development in areas outside the boundaries of a city of fifty thousand people or more and its immediately adjacent urbanized areas with a population density of more than 100 persons per square mile. Priority goes to projects in open country and to rural communities and towns of 25,000 or smaller with FmHA cooperating with other lenders.

Youth Project Loans - for individual rural residents who are not less than ten years old but under 21 to establish income - producing farm or non-farm projects of modest size. Co-signers are required for loans of over $2500 The idea is to get young people started in farming or other kinds of projects which will help them to stay in rural areas in later years.

Community Facility Loans - to develop community facilities for public use in rural areas and towns up to ten thousand in population. Municipalities, counties and special purpose districts are mainly eligible and non-profit corporations may receive loan assistance.

In the housing area, loans and grants available are:

Home Ownership - a rural credit program loan to finance home and building sites in rural areas. Loans can be 100 percent of FmHA appraised value and maximum payback period is 33 years.

Rural Rental Housing - to provide rental living units for persons with moderate or low incomes in rural areas. Persons sixty two and older may also be eligible.

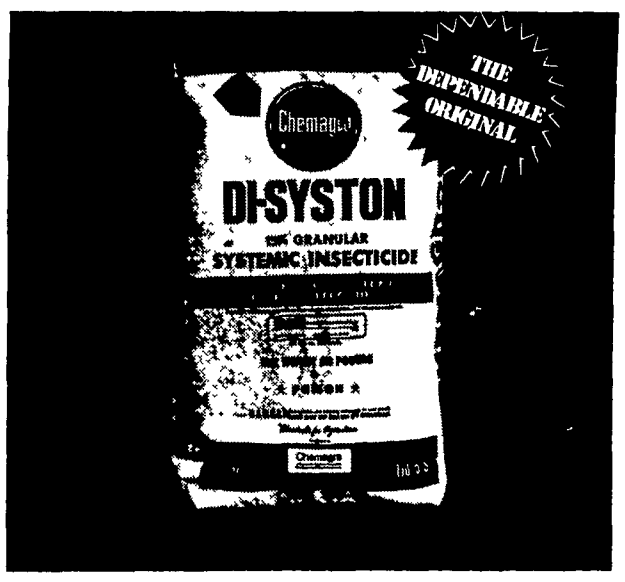
Rural Housing Loans - funds may be used to rehabilitate or repair a dwelling already owned by an applicant who lives in it or who will live in the dwelling once it is brought up to standards. Mainly for lower income brackets.

Rural Housing Loans and Grants For Families With Low Income - for owners' and occupants' dwellings in eligible rural areas for repairs and improvements to homes, mainly to make the homes safe and sanitary. Applicant must be without sufficient income to qualify for Section 502 loans. Combined loan and grant or grant without loan available to eligible applicants 62 or older.

"As is evident, FmHA has a wide spectrum of help available to farmers and rural residents," said Shelhamer. "We in the Pennsylvania Department of Agriculture look forward to a close working relationship with all USDA personnel and we are assured that they will in turn help us to make our programs designed to help rural areas more efficient."

Shelhamer cited the FAPRS (Federal Assistance Programs Retrieval System) computer service his agency is providing to Pennsylvania's towns of ten thousand or less as an example of state - federal cooperation to benefit the commonwealth's farmers and rural residents. Under the FAPRS program, the smaller towns can locate funds potentially available to them under federal programs. The service is free.

SPUD MAKERS



SENCOR® gets the weeds.

Provides dependable, consistent control of a wide spectrum of tough broadleaf weeds, including lambsquarters, wild mustard, ragweed and Pennsylvania smartweed. Effective against many grasses as well. Lasting performance reduces cultivations to a minimum.

SENCOR 50% Wettable Powder can be applied by air or ground as a preemergent or postemergent, or a split application of both, when used as directed. Its excellent water solubility assures quick activation through rainfall or irrigation.

DI-SYSTON® gets the insects.

A planting-time application of DI-SYSTON is the best protection you can buy against a host of potato pests. DI-SYSTON knocks green peach aphids and Colorado potato beetles out of your spuds fast. And keeps 'em out for weeks with lasting systemic protection. Available in liquid or granular formulations.

Chemagro Agricultural Division of Mobay Chemical Corporation, Box 4913, Kansas City, Missouri 64120.

LETTERS TO THE EDITOR

Beef Task Force explained

Dear Editor:

In his letter in your February 26 issue, Mr. Reist R. Mummau in his opposition to the Beef Market Development Plan brings forth several misconceptions that are shared by many. He was correct, however, in saying that there was considerable opposition in getting the law through Congress, but this opposition came from labor unions, militant consumer activists and misinformed urban congressmen.

To set the record staright, I would like to point out the following.

The Beef Market Development Plan is not a government program! This is a producer self help effort that was conceived, born, and developed by some of the best minds in all phases of the cattle industry, nationwide. It is to be financed in its entirety by cattle producers only.

Government's role in the program is minimal. The funds collected nation-wide by the beef check-off will be controlled by the up-to-68 representatives of the cattle industry on the Beef Board. The "government", a part of USDA, will only confirm nominations to the Beef Board, nor will they control the funds or the program. Their only function, as with other commodity check-off plans (such as cotton, potatoes, sheep and swine) is to act as a referee - to blow the whistle if the Beef Board steps out of bounds of the law. This Beef Board will be made up of cattlemen, unpaid except for travel expenses to board meetings.

If a producer is opposed to the check-off he may apply for a refund of the amount paid in assessments by writing to the Beef Board, supplying evidence of how much he has paid. In the event producers grow unhappy with the program they, upon request of 10 per cent of the number of voters in the initial referendum, can have the secretary of agriculture conduct another referendum; then he must terminate the order if a majority of those voting favor termination.

In the export field, funds raised by the Beef Check-off can, by contractual agreement, be used by the U.S. Meat Export Federation to develop markets abroad for our high quality, grain-fed beef, a commodity that only we in the United States produce. While on the other hand, beef imported into the U.S. is mostly lower quality grass-fed beef that goes into manufacturing such as canned soups, T.V. dinners, sausages, and is also used as a ground beef extender by some processors. This meat is a bothersome competitor to our beef, particularly cow beef, and helps depress our cattle market. Funds raised by the check-off, by law, cannot be used to lobby against imports. Lobbying is the domain of the American National Cattlemen's Association, the Farm Bureau Federation and the like

Unfortunately we have come to a point in our country when we must advertise and promote our basic foods in order to sell them at an advantage to the producer and to the consumer. Substitutes are offered in a glowing fashion making it necessary to promote the real thing in self defense. The manufacturing community is out to replace our natural foods with snythetics (ersatz products) with supposedly the unhealthy particles removed by chemical means and vitamins added.

If you think this isn't so, just look what margarine and its Madison Avenue "nutritional experts" have done to butter, what synthetic fabrics have done to the natural fibers. Ever heard of Hamburger Helper - Stove Top Dressing (instead of potatoes) - or Morning Star so-called "sausages"? Ever heard of Tang - Egg Beaters?

To sell our wholesome natural products and to defend ourselves against beef boycotts, the polyunsaturated fat hucksters and the colon cancer adventurists we have got to get our Beef Market Development Plan passed in the referendum this Spring.

If we fail to pass this program, then we can be sure that things will never be any better than they have been.

Sincerely,
John W. Stump
Chairman,
Maryland Beef
Development
Task Force

Cattleman still suspicious

Dear Editor: -

It has bveen stated by an offical of the Beef Task Force, that the government has nothing to do with this program, That is certainly true that the government has nothing to do with the promotional end, like advertising, receiving the millions of assessments, installing $30,000.00 dollar executives, and such measures as its directors decide, but where the law, or government's responsibility comes in, is in seeing that these assessment's come in. If they do not the Beef Board has recourse to the law to see that they do. That is the purpose of establishing a law regarding the plan.

It is like the income tax law, all the people are required to make an income tax report and pay their tax, but it is the Internal Revenue Service which is the arm of the government that sees that they do.

How would you like, if every cattle owner be required to keep record of all cattle pruchases and sales, to determine your yearly assessment for the Beef Board, not just once, but from now on and on. This is what will happen if the needed money does not come in.

If this referendum passes, this Beef Task Force can launch a multimillion dollar program and the law is the guarantee that they will have the money assessed from the cattlemen, to carry their program on.

These are the kind of forces within our national boundaries, that are destroying the freedom that has made this nation great.

Sincerely,
Reist R. Mummau.
Mount Joy, Pa.

Vegetable classes slated

LANCASTER, Pa. - Home vegetable gardeners will again have an opportunity to attend a series of three evening classes prior to the Spring planting season. These informative educational meetings, conducted by the Penn State Cooperative Extension Service are scheduled for March 8 and 9, 15 and 16, 22 and 23, at the Farm and Home Center, Lancaster. Instruction on each of the two consecutive dates will be the same, since each week the sessons will be on different aspects of gardening throughout the three-week series. Starting time is 7:30 p.m. each evening. No fees or advanced registration will be required to attend.

A.G. Lueck, county agricultural agent in horticulture, will be in charge of these evening meetings. A special session on backyard fruit growing will also be held on Tuesday April 5th. This will give backyard fruit growers a chance to learn more about this kind of home horticultural endeavor.

Sr. Citizen rebate claim forms must be filed by June 30

HARRISBURG, Pa. - Rep. Noah W. Wenger, R-Lancaster, has reminded senior citizens that claim forms now available for rebates on their paid 1976 property taxes or rent payments must be filed by June 30, 1977.

"Senior citizens age 65 or over, widows and widowers between the ages of 50 and 64, and disabled persons of any age may be eligible for rebates up to $200, provided the total income of claimant and spouse did not exceed $7499 in 1976, "Wenger said.

"Claim forms are mailed automatically to all persons who received rebates last year. Those who are eligible for the first time may obtain a claim form from my legislative office in Harrisburg."

The Lancaster County legislator explained that all persons filing for a rebate must submit receipted 1976 tax bills or a rent certificate with their claim. First - time claimants must also submit proof of age or disability.

A claimant must have either owned and occupied the property or rented and occupied their home, apartment, or nursing home in Pennsylvania during the period in 1976 for which a rebate is claimed.

Persons needing claim forms may contact Rep. Noah W. Wenger, P. O. Box 109, House of Representatives, Main Capitol Building, Harrisburg, Pa. 17102. Claim forms are also available at various state agencies throughout the Commonwealth, including State Liquor Stores, County Boards of Assistance, Tax Collectors, County Commission Offices, all offices of the State Revenue Department, or by contacting the Property Tax or Rent Rebate Bureau at 8000 Derry Street, Harrisburg, Pa. 17111.

Risser voted OYF by his neighbors

By DIETER KRIEG

ELIZABETHTOWN, Pa. - "I was raised on a farm and I guess I had that much ag in me that I couldn't throw it off," Brian Risser said modestly in answer to a question as to why he entered the farming profession. It's not that he ever wanted to be anything else, but he could have been. According to his wife, the former Jean Zimmerman of Hershey, Risser was the valedictorian of his class and had been encouraged by his teachers to become a doctor.

"He decided to go into farming and I think that's wonderful," Mrs. Risser said with obvious pride gleaming from her eyes.

Last Friday night the Elizabethtown Young Farmers voted Risser as their outstanding young farmer. The honor was bestowed on him during the annual banquet which was held here at the town's new fire hall. Pennsylvania's Secretary of Agriculture was on hand to participate in the program. A more detailed report on those proceedings and Shelhamer's speech can be found elsewhere in this edition of Lancaster Farming.

Risser was quick to point out that he was not the only one involved in the farming operation near Bainbridge in northwestern Lancaster County. He's in partnership with his father, Harold, and brother, Donald. The elder Risser owns the real estate, a modest 68 acres, but all told they farm 375 acres and maintain a herd of 100 cows. In addition the family has 120 head of youngstock, including some dairy beef.

Risser does not believe a farmer has to increase his operation just for the sake of getting big, but does admit that his family has had to make some decisions along that line in order to cope with economic pressures. The main thing, he believes, is to watch the business closely and adapt to changing trends.

The Rissers have a substantial record for doing just that. Some years ago they were the second family farm east of the Mississippi to install a Slurrystore manure handling system. Currently they're directly involved with Agway's research programs on alfalfa management and hay curing. Another relatively unique idea employed at the Risser farm is the mixer wagon.

Risser is a 1968 graduate of Lancaster Mennonite High School. After that he served two years in the service and in 1970 the formal partnership between him and his father and brother was formed.

"I personally have a good outlook for the farming business," Risser told this reporter, expressing considerable satisfaction with his work. He's optimistic of having a good future and said "I hope to be a farmer for a number of years."

The Outstanding Young Farmer award in the Elizabethtown area was bestowed on Brian Risser last week. Congratulating him for the honor is Ken Brandt, legislator from the area, who was an invited guest to the second annual banquet of the Elizabethtown Young Farmers.

Red Rose club reorganizes

LANCASTER, Pa. - Last Wednesday evening, the Red Rose Beef and Sheep Club held its reorganizational meeting and choise officers for the coming year. This year approximately 100 club members will be feeding steers and lambs for the state farm show.

At the get-together, the club voted to hold their meetings on the first Wednesday of every month. Marty Burkins, Holtwood R1, 1976 county and district champion, also gave a report on her last year's steer project.

Pride of ownership threatened

AFBF joins Ag Land Fund attack

WASHINGTON, D. C., A proposed fund to invest in agricultural land poses a major threat to the nation's farmers, Harold B. Steele, Illinois Farm Bureau president, told a House Agriculture Subcommittee hearing here last week.

The Ag-Land Fund proposed by Continental Illinois National Bank and Trust Company of Chicago "could be the first step toward large scale ownership of farm properties by powerful financial interests," Steele told the subcommittee on family farms and rural development.

Steele, a member of the American Farm Bureau Federation board of directors, testified on behalf of the national organization. The subcommittee is examining implications to family farms of the Ag-Land Fund, an investment trust to purchase and manage farmland.

"Farmers are extremely apprehensive" about the proposal, Steele said, feeling that it "would change the pattern of farmland ownership in this country from local ownership by private individuals or small groups of individuals to absentee ownership by financial institutions or large corporations."

The Farm Bureau spokesman pointed out that "most of our agricultural production comes from family farms where the bulk of labor and management is provided by the farmer and his family."

Steele said the Ag-Land Fund concept "overlooks a key ingredient in the success story of American agriculture, the pride of ownership. Pride cannot be written into a balance sheet or a profit-loss statement, but pride of ownership is a key element in the basic tradition of family farms in this country. This tradition should be continued.

"The proposed Ag-Land Fund would adversely increase land values which have escalated rapidly in recent years as farmers and others have competed for available land," Steele said. "Not only would the fund's farmland purchases tend to raise land values, but it would also tend to raise the level of real estate taxes which are based on land values."

Steele said there is a basic unfairness in allowing tax exempt organizations to compete with taxpaying farmers. "There is no reason why the favorable treatment given to pension trusts under the tax laws should extend to trusts which compete with individual farmers in farming operations." Under the proposed plan, the Ag-Land Fund could receive gains from the purchase and sale of land, rentals, and profits from its hedging operations without having to pay tax on this income.

While the Chicago bank has indicated its plan would encourage the entry of young people into agriculture, it is doubtful whether the proposed fund would provide much assistance to young farmers. "We do not believe that the trust company of the bank will entrust farming operations of the magnitude under consideration to relatively inexperienced farmers," Steele commented.

Steele said the proposal raises an important public policy question: "Who will control American agriculture in the future?"

The "family farm" concept has been a highly productive and efficient system of food production, he said.

"It is no accident that the American farmers are able to provide consumers at home with ample supplies of food at reasonable prices and at the same time produce more than $22 billion worth of products for sale abroad.

"Such a production system should not be abandoned lightly or allowed to be replaced piecemeal because we do not have a national policy on ownership and control of agricultural land."

The Farm Bureau spokesman urged the subcommittee to (1) cause an in-depth study to be made of the current ownership of agricultural land, (2) take such action as may be necessary to prevent the implementation of the proposed Ag-Land Fund or similar plans, (3) conduct fact-finding studies to develop a national policy on who should control a icultural land and agriculture, and (4) in the event the Internal Revenue Service provides a favorable ruling to the bank's request, consider legislation to make the rents received by the Ag-Land Fund and similar trusts, as well as other gains and earnings, taxable to the fund upon receipt.

Worms are stealing your milk.

Break the worm cycle with BAYMIX®

More than 80 per cent of all dairy herds are worm-infested It's true Researchers have found worms in eight out of 10 herds inspected In northern dairy states,as well as those in the warm sunny south! With those kind of odds, chances are your herd has worms

Worms can cost you money by reducing...
- Milk production potential
- Feed efficiency
- Growth of replacement animals

BAYMIX is the "Dollars & Sense"wormer. Here's why:
- Sell your milk while you worm Milk sold instead of dumped pays entire cost of worming
- Worm your entire herd at one time Worm milking cows, dry cows, replacements and calves to break the worm cycle Keep unwormed animals from reinfesting your herd
- Faster gaining replacements Worm-free cattle gain faster Your heifers reach breeding weight sooner, begin production at higher levels
- Easy and convenient No handling No restraint to stress your animals Just topdress on feed for six days

Get the full BAYMIX story from your animal health dealer

Young Farmers hear Shelhamer

By DIETER KRIEG

ELIZABETHTOWN, Pa. - The Elizabethtown Young Farmers voted Brian Risser as their outstanding member during the annual banquet held here last Friday night which featured Agriculture Secretary Kent Shelhamer as guest speaker.

The evening ceremonies were highlighted by a number of presentations, including a handsome appreciation plaque for Secretary Shelhamer who was obviously surprised by the gesture. Program chairman Ken Myer presented the gift.

When the Agriculture Secretary rose to address the Young Farmers, his audience stood to give him a rousing ovation. Speaking on several issues, Shelhamer's main message was that farming has a good future and that he will be working towards that end.

No matter which branch of agriculture the farmer is in,Shelhamer said, "the bottom line is really only how you market your time." Explaining the statement, the Secretary said it was still possible today to make a good living on 50, 200, or 500 acres. "The difference is how you market your time," he stated. It was a remark which the E-Town Outstanding Young Farmer, Brian Risser, found quick agreement with. Interviewed by Lancaster Farming after the formal program, Risser said:

"The only kind of farmer who is going to survive is the one who really watches his operation. Management is the key. A fellow doesn't have to get big just for the sake of getting big." More on Risser's thoughts and farming operation appear in a separate story elsewhere in this edition.

The Agriculture Secretary is looking forward to a variety of programs during his reign at the Department. "We've got to have a better marketing program," he said, adding that he's hopeful of having new Farm Show facilities where Pennsylvania farmers can "show off" their products. "All too often we've been the victim of a depressed market," Shelhamer remarked.

Another project Shelhamer would like to see is a computerized network of state agriculture departments all across the country. He noted that the Commonwealth has had a computerized legislative system since 1962 and that such electronic resources could be used to have quick knowledge of farm situations around the country.

Continuing his talk on how agriculture can be improved, Shelhamer emphasized the importance of research and finding new innovative ways to increase production. He encouraged farmers to be flexible in their operations and to be very alert to marketing conditions.

Telling his audience "I am a politician" at the very beginning of his speech, Shelhamer included political personalities among his "bright outlook" for agriculture. Among them were President Jimmy Carter, USDA Secretary Robert Bergland, and Vice President Walter Mondale - all of whom have close ties to rural America. On a broader perspective, Shelhamer gave some details on the internal workings of his Department.

"We have 700 employees in the Department of Agriculture and seven districts," the Secretary began, "our budget is about three-tenth of one per cent of the state budget - so you needn't feel we are overly lavish with your funds."

Expressing concern over the recent energy crisis, Shelhamer noted that agriculture uses 15 per cent of the total energy output - more energy than the U.S. imported during all of 1974. "The use of energy on the farm has doubled since 1940," the Secretary said.

"I believe these problems can be solved," Shelhamer concluded. "My door is open to you."

FARMERS HONORED

Aside from Risser, nine others were cited for having done outstanding work with their farming operations last year.

Taking home three plaques was Robert Kauffman, Elizabethtown area dairyman who has become well known for his Holstein herd. Registering a 616 pound butterfat average on his cows, Kauffman captured first place in that contest. Another first came in the silage contest and a second-place award was given to him for his shelled corn harvest - 165.6 bushels per acre.

Joe Wivell, president of the E-town Young Farmers, won the shelled corn contest with 167.4 bushels per acre. In third place was Dale Hiestand with 142.5 bushels. Kauffman's leading performance in the silage contest was followed by Irwin Engle and Clair Hoover, Kauffman's winning tonnage per acre was registered at 23.3 tons.

In the ear corn contest, it was Glenn Schultz in first place with 160.1 bushels per acre, followed by Clair Oberholtzer with 145.7 bushels and Roy Bixler with 142.5.

Ken Myer was cited for having had the high producing cow in the area's DHIA program last year. She was C. Whycroft Supreme-Red whose record stood at 23,557 pounds of milk, with a 3.9 per cent test and 925 pounds of butterfat at the end of 305 days. With 357 days to her credit, the record stood at 26,131M, 4.0 per cent, 1046F. She was six years and ten months of age at the start of the lactation.

Recognized for high achievements at the Elizabethtown Young Farmer banquet last week were, (clockwise, starting from lower left) Ken Myer, high individual dairy cow; Joe Wivell, top yield for shelled corn; Robert Kauffman, high dairy herd and first with silage corn; and Glenn Schultz, high in ear corn.

Kent Shelhamer, left, receives a plaque of appreciation from Ken Myer, representing the Elizabethtown Young Farmers. Myer recalled that when he stopped at the Pennsylvania Department of Agriculture Building earlier this year to invite Shelhamer to the Elizabethtown banquet, the Secretary spoke with him for about a half an hour even though "he didn't know me from Adam."

Top agriculturists named at Conrad Weiser

By LAUREL SCHAEFFER
Berks County correspondent

ROBESONIA, Pa. - The Conrad Weiser Chapter of Future Farmers of America held their annual FFA banquet Feb. 24 to honor those members and adult farmers who received the most recognition over the past year.

Topping the list of awards was Norman Manbeck, vice-president of the Chapter, who received the Star Chapter Farmer Award. Todd Lynn followed by receiving the Star Greenhand Award. Ralph Troutman was named outstanding young farmer. The Chapter presented honorary membership degrees to Mr. and Mrs. Richard Hummel; Mr. and Mrs. George Ludwig Jr.; Mr. and Mrs. Raymond Zimmerman Sr.; Mr. and Mrs. Charles Noss; and Mr. and Mrs. Sebastian Graupp.

Brief addresses were made throughout the program by fellow FFA members and Dr. Walter Rohrbach, who is retiring as superintendent. Rohrbach told the FFA members how fortunate they are and how he is looking forward to getting out in the fresh air once again. Comments were also given by Harvey Smith and Lester Gelsinger, Adult Farmer president.

National Foundation Awards were bestowed by Rodney Mack to Leon Stauffer for soil and water management; Bob Lebo, fish and wildlife management; and Norman Manbeck, agriculture mechanics and crop production.

Sandy Effert, FFA advisor, awarded the following; Salesmanship, George Ludwig; Top Citrus Fruit Salemen, Bruce Ludwig, first; Ron Wanner, second; and Ray Noss, third. Also honored was Norman Manbeck for dairy production; Bruce Ludwig, ag processing; Todd Lynn, poultry production; Donald Feeg, diversified livestock production; George Ludwig, swine production; Ronald Wanner, ornamental horticulture; David Stump, placement in agriculture production; and Ernest Gelsinger, farm safety.

Keystone Farmer Awards were also given to Ray Zimmerman, Art Noss, Bruce Ludwig, and Norman Manbeck.

Scholarship Awards were presented to Todd Lynn, ninth grade; Donald Feeg, tenth grade; Bob Lebo, twelth grade.

After the FFA awards, Leverne Barrett presented awards to Adult Farmers. Leading members in the Seed Corn Contest was Harold Heck with 157.89 bushels per acre. Second place went to Dennis Sattazahn with 157.83 bushel per acre. In third place was Robert Myer and in fourth was Donald Duncan.

In the Cost per Bushel Division, Dennis Sattazahn placed first with a cost of 81 cents per bushel; Harold Heck was second with 93 cents per bushel; Donald Duncan was third with 95 cents.

Lester Gelsinger received the honors by placing first the Quality Division with Oscar Manbeck second.

Attendance awards were given to Oscar Manbeck, first, for attending all 15 of the Adult Farmer meetings. Second place was Allen Gaul who attended 14 meetings; tied for third were Harold Heck and Walter Augsberger.

William James of Farm Credit Association, presented the Outstanding Farmer Award for the area to Ralph Troutman, a dairy farmer.

After the presentation of awards the program was concluded with a movie entitled "FFA Stars Over America."

Agway drivers' safety noted

LEESPORT, Pa. - Awards for completing a year or more of driving without a preventable accident were presented to 67 Agway drivers from the Leesport area at a dinner last month at Lincoln Restaurant, here.

About two-thirds of Agway's regular drivers who are eligible for awards are being recognized for safe driving records of one to 32 years. Agway drivers covered more than 57 million miles during 1976, operating vehicles from small service vans to tractor - trailers.

Agway's accident rate is 8.4 accidents per million miles, compared with the national average of 12.1 accidents per million miles, for all fleets reporting such statistics to the National Safety Council.

Awards were presented by Agway area manager Raymond A. Cochran and petroleum district manager F. Donald Stas. Richard Resig, safety director of Syracuse, N. Y., represented the Agway Safety Department.

Agway is a farm supply and food - marketing cooperative owned by 118,000 member - stockholders, serving agriculture in 12 northeastern states.

Crop insurance available

YORK, Pa. - Beginning with their 1976 corn crops, growers in Pennsylvania had their crop investment protection raised by some 15 percent or more, according to James Bucher, district supervisor. This same increased coverage is still in effect for 1977. Federal Crop Insurance is offering the highest guarantee per acre ever to corn farmers in Pennsylvania.

According to Bucher, many banks and other sources of production loans are expressing interest and delight at the increase in coverage, since the strengthened collateral assignment in this All - Risk protection assists in securing credit financing, so vital in today's farming, and adds greater stability to the individual farming operation.

This Federal All - Risk insurance strengthens credit, protects investment dollars, and eliminates a loss of production expenses. Corn and other insurable crops are protected against drought, excessive moisture, hail, disease, insects, wind, flood, fire and any othe hazard due to weather damage from the time it is planted until it is harvested. Tobacco is protected until it is delivered to the warehouse.

Down the road sales efforts by local fieldmen have been stopped for 1977 due to present limited funding. However, for the time being, protection can still be obtained by interested farmers.

Complete details about the Crop Insurance Program, sponsored by the United States Department of Agriculture, are available from your Federal Crop Insurance offfice, located at 1721 Whiteford RD, York, Penn. 17402 - phone 755-3416. Deadline for corn is April 30, for tobacco it's a month later.

'Sunshine' affects USDA

WASHINGTON, D.C. - To comply with the new "Government in the Sunshine Act," the U.S. Department of Agriculture plans to begin restrictions at an earlier stage than in the past on employee discussions about proposed actions on marketing agreements and orders.

Current regulations now forbid such communications from the close of a hearing on a marketing order action until issuance of a final order. Under the amended regulations the restriction begins at an earlier stage, at the time a notice of hearing is issued, and continues until issuance of the final decision, the stage at which it is submitted for producer approval. The rule change becomes effective March 12.

Donald E. Wilkinson, Administrator of USDA's Agricultural Marketing Service, which has responsibility for marketing agreements and orders, said these restrictions on what are known legally as "ex parte" communications are intended to prevent government employees from discussing the merits of a proceeding with any interested party if all interested parties are not given notice and equal opportunity to participate. "This restriction does not, however," Wilkinson added, "prevent employees from responding to requests for information as to the status of pending rule - making actions on marketing agreements and orders - so long as the merits of the particular action are not also discussed."

EDITORIAL COMMENTS

[Continued from Page 10]

bullheadedness is involved in this case. LARA officials are cool to the proposal that they move their garbage to a landfill on the Lancaster-Chester County line, where lots of space is available under sanitary and reasonably attractive conditions. The LARA facility in Manor Township, on the other hand, is an eyesore. What's more owners of the Lanchester facility would love to have the additional refuse since they aren't operating anywhere near capacity at this time LARA argues that the distance involved would be too costly. John Barley counters that the distance differs by only six miles. The roads to the Lanchester site near Honey Brook are much better, which should pretty well cancel the extra six miles anyway.

Taking a highly productive parcel of land out of production would be foolish to do. If LARA doesn't realize it now, they will hopefully be persuaded to other means by public opinion which thus far has been decidedly in favor of the Barleys.

Unlike LARA insists, there are other feasible and practical alternatives. On a short-term plan, the Lachester facility should be given strong consideration. On a long-range basis, incinerators and recycling facilities should be eyed. That'll be the wave of the future anyway. And one thin LARA should keep in mind: You can't very well recycle farmland So let's do it with tin cans, glass and paper instead. Let's set a good example, LARA, not an infamous trend

Farm anti-trust

(Continued from Page 1)

quality and choice have diminished while food prices have increased eight to 15 per cent a year."

"If the big money interests have their way, still more farmers will be driven from their land or forced to become the next generation of sharecroppers," Abourezk said. "The most blatant example is the recently revealed plan by Merrill Lynch and Continental Illinois Bank to buy up $50 million worth of prime farm land in the Midwest and South. The Family Farm Anti-trust Act would make such land grab schemes illegal."

The American Agricultural Marketing Association has estimated that by the end of this decade 50 per cent of the American food supply will be under corporate control and nearly 75 per cent by 1985, Abourezk said.

"When four companies control more than 50 per cent of a market, an oligopoly exists. Much of our $150 billion-a-year industry is already under such oligopolistic control. For example: Kellogg's, General Mills, General Foods, and Quaker Oats manufacture 91 per cent of the breakfast cereal; 90 per cent of the soups are made by Campbells; 60 to 70 per cent of the dairy products by Borden, National Dairy, and Carnation; and 65 per cent of the nation's baby food by Gerber.

"Most of all, many of these large corporations are involved directly in production, aa well as processing and distribution. In most cases, this vertical integration is accomplished through contracts with farmers - the corporation does not become a farmer, it merely rents them. The Family Farm Anti-trust Act would put a stop to this sort of corporate domination," Abourezk said.

Abourezk added that his anti-trust bill would also benefit consumers by helping to restore competition to the food industry. "Competition is needed to lower prices and balance out the market in favor of the producer and consumer. Corporate control inhibits healthy market competition. Aside from economic costs, it also burdens our country with added social costs caused by the forced migration of rural and family farmers to cities and towns," said Abourezk.

"Only four per cent of the nation's population remain on farms today and corporations already exert far more control than should ever have been allowed. If we wait any longer to counteract this trend, the battle will be lost,' Abourezk said.

My Thoughts

And welcome to them

By JOANNE SPAHR

When I was introduced to the members of my table at the Pennsylvania Pork Producers banquet last Saturday night, the person doing the introducing was an obvious reader of my column She said, "This is Joanne Spahr, she writes about cats" Enough. No more Siamese cat stories This week I have another kind of cat story to tell, though - a fat cat story. You know who I mean - the type of people who do almost anything for the good of themselves, even at the expense of others

What brought this to mind was an item I read in the National Farmers Union's Washington Newsletter. In that publication it was revealed that John (Jack) Knebel, who served as Secretary of Agriculture for a short time after Earl Butz left office, has turned up as a member of the Chicago law firm of Baker & McKenzie, the firm who is the legal counsel for Continental Illinois National Bank and Trust Company, the promoters of the "Ag Land Trust" plan. The NFU newsletter got its information from the **New York Times.**

In the **Times** article it was not indicated whether Knebel would represent the Bank, but it did quote him as being for the investment plan. If fact, he is on record as saying, "This is going to help preserve the family farm."

Wonder if he discussed the issue with a farmer or a farm organization representative lately? I'm sure he has, and all I have to say is, "Way to stick with us, Jack."

It's gotten to the point that the saying, "All for one, and one for all," doesn't even hold true Instead, it should be, "One for one, and one for all" - all the land that is

Correction

In an article last week on the Pennsylvania Poultry Federation's fund raising banquet to be held on March 31 at the Host Farm in Lancaster, an error was made in the phone number to call for reservations. That number should be 717 652- 7530.

Farm land values up

UNIVERSITY PARK, Pa. - Recent release of information has been a surprise to many farmers and to economists, relating to the value of farm lands.

An up surge of 14 per cent in farm real estate in the United States as an average from the prrevious year. The Midwest section had an above average increase of 20 per cent.

The per acre value in Pennsylvania is just over $1,000, ranking the land value in the top 10 in the nation. Higher values per acre are found only in lower New England, New Jersey, Delaware and Maryland along with Iowa, Indiana and Illinois.

With farm size indicating the number of acres per Pennsylvania farm, the state ranks 22nd in the country as to the total real estate value per farm. The smaller size farms, in comparison with the Midwest, has kept the total farm land value at about half that of Illinois, Iowa, Nebraska, Idaho, North Dakota, Delaware and Florida. Some states are more than three times Pennsylvania's total such as California, New Mexico, Montana, Wyoming, New Jersey, Nevada, Arizona and Colorado.

Federal Spending

Federal spending has been growing faster than the rate of expansion of the economy. In the past 20 years, federal spending has risen by nearly 375 per cent, and the Gross National Product-(GNP) the nation's total output of goods and services — by 275 per cent. In the two fiscal years 1975-1976, federal outlays are rising about 38 per cent. That's almost double the GNP increase of 20 per cent.

Courthouse Squares

Broiled Potato

Cut one medium peeled crosswise in one-eighth inch thick slices. Place slices on rack with beef patty; brush with one teaspoon butter; sprinkle with dill. Broil until tender and lightly browned —about six minutes. Makes one serving.

SLURRYSTORE®

How to handle manure without handling manure

Never fails. Things always break on a day like this. First thing you know, you're knee-deep in it.

Bad scene. The Slurrystore system can put an end to it once and for all. Daily hauling is not only an offensive job, but darn inefficient use of the nutrients in manure. A better way is to store manure until you need manure.

It makes more sense to spread manure in volume when you really need it — like after the first cutting or in the fall to maximize results in spring crops.

The Slurrystore Manure Management System takes manure off your hands until you're ready to use manure. Take a few minutes and write for our free brochure — "Slurrystore — Manure Management".

Try WAYNE Calfnip and save two ways!

Wayne Calfnip saves two ways! First, it costs less. Second, it produces a good calf with substantial savings over whole milk feeding. Many millions of calves have been raised successfully and economically on Wayne Calfnip. Today's Calfnip is better than ever before as the result of continuing research developments.

Calfnip is high in milk products with all milk protein. Antibiotic fortification as well as high vitamin levels give optimum growth and performance under stress conditions. High energy comes from 10% quality animal fat in dispersible form. Smooth, glossy hair coats, growthy calves, less digestive upset and ease of feeding are a few more reasons for the wide acceptance and popularity of this outstanding milk replacer.

Ask any of the Wayne Feeds Dealers listed below about Calfnip today.

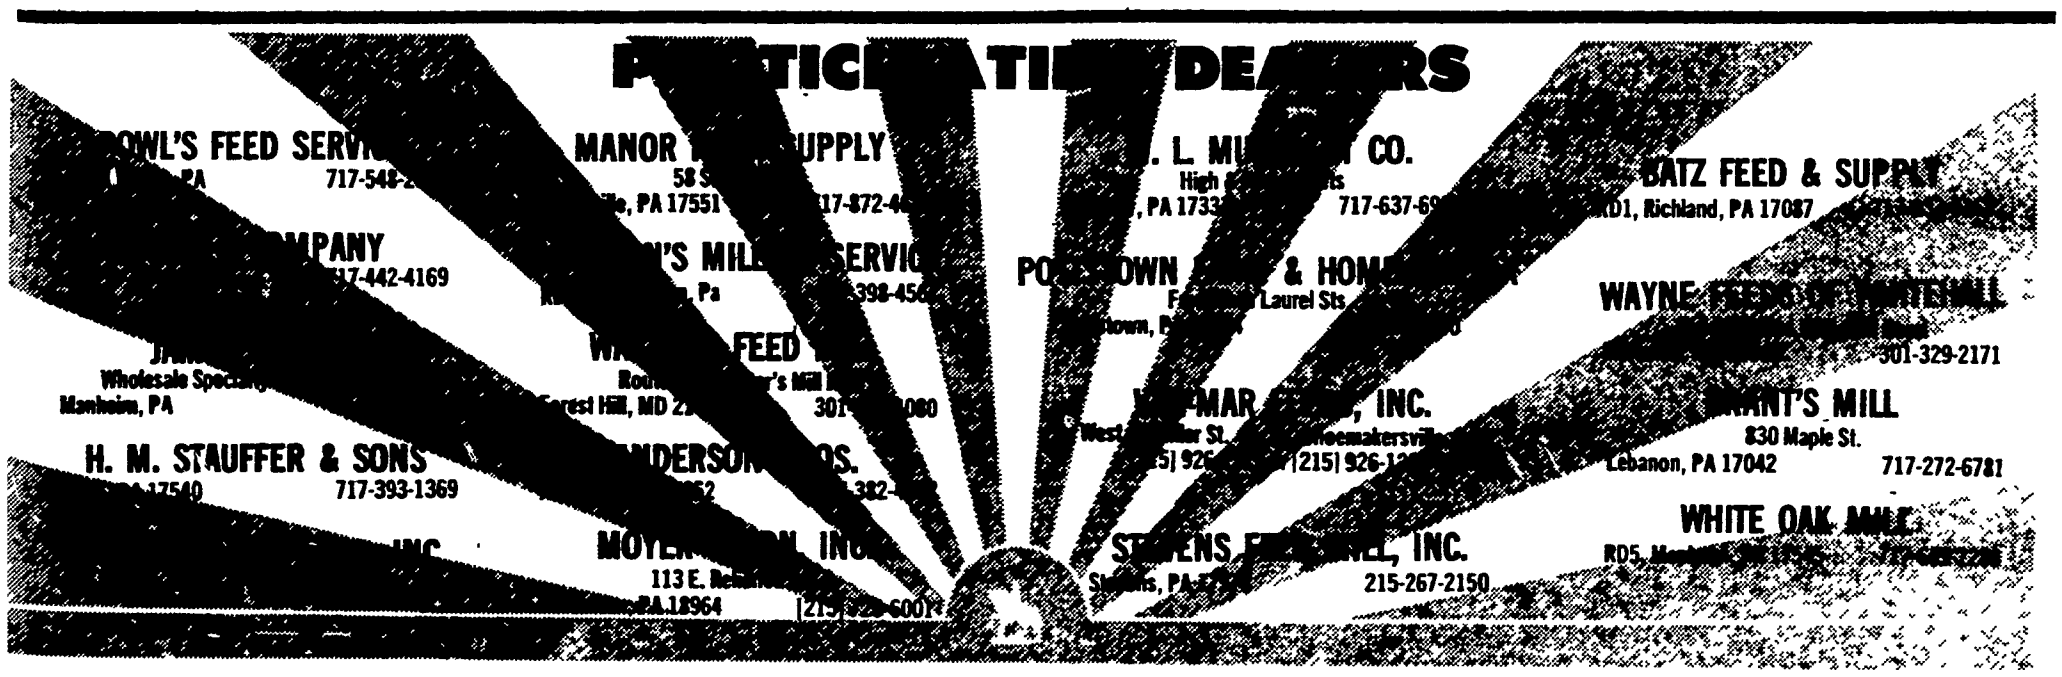
Wayne Power Pack is an economical, high energy building feed.



From watermelons to flowers, Burpee seed company develops seeds for the avid gardener. And, while the flowers, below, look like chrysanthemums to most people, Burpee identifies them as "Fantastic Marigolds." If this is the case, it emphasizes the point that Burpee's work with various new strains does come up with surprising results. On the other hand, there's nothing surprising about the watermelon to the right it's as delicious-looking as ever.

These tomatoes look taste-tempting, although we really can't look forward to eating them until Summer. Seed companies, on the other hand, never really forget the work they have to do with these plants since they are always testing new strains of vegetables for marketing.

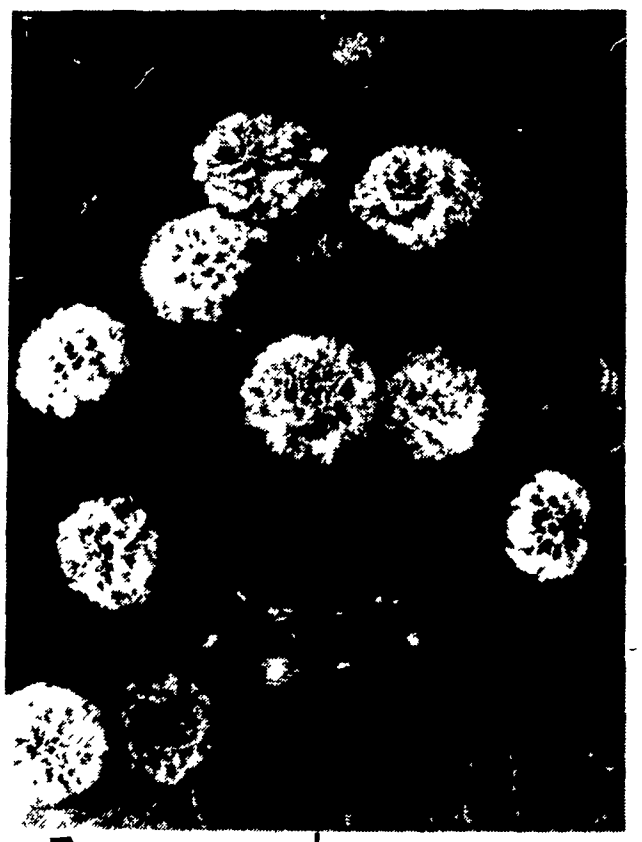
Burpee prepares for Springtime

By SUSAN KAUFFMAN
Feature Writer

Positive signs of Spring's arrival trigger many experienced and novice gardeners' imaginations. These individuals draw up visions of a plot of ground flourishing with appetite-tempting tomatoes, cucumbers, sweet corn, cantaloupes, and spirit-reviving colorful flowers. A daydreaming trip out of the Winter doldrums into a sunny garden scene spurs ambition and hope for tilling the soil in a few weeks.

Just when Winter-weary souls need it the most, the Pennsylvania Horticultural Society sponsors its annual Philadelphia Flower and Garden Show. Having organized the first flower show in America in June, 1829, the society is celebrating its 150th anniversary this year the week of March 13 through 20. As one of the largest horticultural exhibits in the country, it draws huge crowds who come to marvel at the beauty of living plants. But, many of the visitors miss the ingenuity of mankind exhibited there in that the beauty results from behind-the-scenes scientific processes and time-consuming hand labor.



Homestead Notes

One of the many exhibitors at the flower show which has part of its enterprise established in Lancaster Farming's coverage area is the W. Atlee Burpee Co. According to Jeannette Lowe of the gardening information department at Burpee's, the company, which was founded in 1876, offered the first American-produced seeds. Prior to that time, seeds were imported from Europe. The Fordhook Farms in Doylestown, Pa., were established in 1888. Floradale Farm was established in 1909 near Lompac, Calif., and Santa Paula Farm, near Ventura, Calif. was established in 1944.

Most of the commercial seeds are grown in California for Burpee customers because growing conditions are ideal for developing vigorous strains. Thirty to 40 acres at each California farm are used for trials to see that marketed varieties are vigorous and true to type. Also at these farms, new varieties are developed. According to Burpee information, it usually takes 10 to 15 years to develop a new variety, and during this time many "hopefuls" are discarded.

At the Fordhook Farms in Doylestown, the new varieties are tested under eastern growing conditions. There are large trial fields of Spring flowering bulbs at Fordhook and extensive programs of vegetable breeding and testing. This week, however, Fordhook Farms is busy getting the last plans completed for the

[Continued on Page 51]

It's a little too early in the year to really be thinking of Halloween and Halloween pumpkins, but not so if you look through seed catalogs. To a gardener, dreaming of a pumpkin on a cold Winter's night is simple. By the same token, looking forward to an arrangement of marigolds from your own flower beds is both easy and enjoyable with a seed catalog by your side.

When you think of snapdragons, you automatically think of Summer, OR you think of the Philadelphia flower show to be held very shortly in the City of Brotherly Love. Burpee seed company has long been preparing for the yearly event and is now closing up all preparations and getting ready to transport their flower gems to the show.

Miss Lois Stringer (front) and Miss Jeannette Lowe inspect lettuce specimens. Miss Stringer's notebook is essential to her work for keeping accurate records. Both women work with the Philadelphia flower show display for W. Atlee Burpee Co.

Burpee prepares

[Continued from Page 50]

exhibit at the Philadelphia Flower and Garden Show. A visit to the greenhouses proved months of planning and care have produced a Summer garden in March.

With Jeannette Lowe, horticulturist, and Lois Stringer, vegetable trial manager and All American Vegetable judge, as guides, the fine points of handling an extensive exhibit of live plants became quickly apparent. Anyone who has ever aspired to exhibit green beans, tomatoes, asters, or potted plants at a community fair can identify with some of the problems of displaying produce and plants at their peak of perfection on a given date. Timing is the key factor. Produce and flower must appear at the right time, and this requires planning months ahead.

This Winter has been a little harder to work with but not because of the cold, according to Miss Lowe. Although it was unusually cold, it was also unusually bright. Clear, sunny days, week after week, forced the flowers faster than normal. "There have been very few overcast days this Winter," she remarked about dreary days.

There are many variables in producing plants and flowers for a specific stage at a given date, but extensive, accurate records kept over the years help control some factors. Lois Stringer, vegetable trial manager, carried a rule and notebook as she went through the greenhouses measuring and counting and recording the inventory for the exhibition the second week of March. Since the display will include potted and cut specimens, a detailed accounting of the number of plants to be used each day to maintain a quality exhibit are accurately tabulated.

Getting the plants to the display site entails quite a lot more than the stuffing of newspaper around pots in a cardboard box seen at local fairs.

Large flats are designed to hold many plants. Tomatoes are grown in baskets, trained on six-foot-high poles, grown in hanging wire cages, or grown in cylindrical shaped wire frames. These are only a few well-planned moving techniques.

To simulate a permanent garden plot at the show, "rows" of vegetables such as bib lettuce and green bean plants are grown in plastic-lined wooden boxes which can be separated into sections by snipping the plastic, lifting out a section and placing end to end to form the row.

In order to have the produce on the plant during the exhibition, special transporting arrangements are necessary. Cloth sacks are gently tied around the red-ripe tomatoes hanging on the vines. "They look like they have diapers on them," Miss Lowe graphically explained.

These tomatoes are stacked, and are six feet tall with beautiful clusters of fruit. They are specimens grown at the Fordhook Farms, Doylestown.

Besides the garden plot and the cut flower displays, Burpee's will be showing some of the processes of developing hybrids through selective plant breeding. A group of fuzzy-looking marigolds will show the female parent which does not have the ruffled petals characteristic of the marigold flowerette. Several stages will be represented.

Although hybrid varieties may take 20 years to develop, they are worth it according to Burpee information because they benefit the grower through increased yield, higher quality vegetables and flowers,

Burpee prepares

[Continued from Page 51]

increased vigor of the plants, and disease resistance. A number of methods are utilized to develop these hybrids which provide many advantages for the gardener.

"Until recently, specialists relied a great deal on finding natural mutations in their vast fields as a source of new material. These so-called "sports" were selected and eventually pure lines developed from them," states a Burpee publication.

Recently, geneticists have developed several new scientific methods to produce different and better varieties.

The first generation F1 Hybrid is produced by the controlled crossing of two distinct but very uniform parent lines. "This process combines and intensifies all the best features of each of the parents in the resulting F1 Hybrid. For example, a cross between a big American Marigold "Mamma" and a dwarf French "Papa" results in a dwarf-sized plant with a big flower. These resulting triploids or "mules" cannot produce viable seeds.

Another method of developing hybrids outlined by information from Miss Lower is the use of the drug Colchicine extracted from the corm of the Fall crocus. Once used as a remedy for gout, this drug proved to be very effective in doubling the chromosome number in plants. "The chromosomes are tiny particles found in all living tissue which carry the hereditary characteristics. When the number of chromosomes is doubled, frequently desirable changes occur, perhaps stronger stems, darker green foliage, larger flowers, richer colors," states this horticulturist. These hybrids are known as tetraploids.

Crossing and re-selecting is yet another method for developing hybrids. Crossing two plants, each with some especially desirable but different features, growing theresulting crosses, self-pollinating these, and raising the second generation seed often is a slow but sure start to new varieties. In the second generation the features united in the crosses break up into new combinations. The best plants are selected and self-pollinated season after season until new types are purified and increased.

"Literally millions of plants are grown, studied, and evaluated, with only about 5 per cent of the very best selected to become future stars in 10 to 15 years," states Burpee information. In 1954, Burpee made an offer of $10,000 to the first person sending seeds producing White Marigolds. After 20 years of selecting paler and paler yellow marigolds, a housewife from Iowa received payment. These seeds must be increased and will not be available for several years.

Whether the gardener sees the exhibits at the Philadelphia Flower and Garden Show or in her daydreams of Summer bounty and beauty, he or she will probably not realize the scientific complexity and many hours of hand labor which go into seeds and their resulting plants, flowers, and produce.

Ida's Notebook

Ida Risser

On a dismal gray day in February or even early March, it is difficult to force myself to pick up the seed catalog and place my order. When I really get into gardening I love it, but just anticipating all that work makes me tired.

It is so much nicer to read through several books on colonial cooking, which I've gotten from different libraries, and then try some of the recipes. It is interesting to note that the Indians grew pumpkins and squash among their corn. They also ate Jerusalem artichokes. Their succotash was made of corn and kidney beans and cooked in bear grease.

It is so much nicer to sit down and write a letter to an elderly relative and send along poems you think they will enjoy. On a cloudy, rainy day, I'd rather embroider a pillow case than plod around in the mud outside. But, the inventory of seeds I have on hand must be taken and maybe this is just the day to do it.

xxx

The other week a few ladies from our church went to the Lancaster General Hospital to sew. I usually ask for mending, but since I arrived a bit late, my job was to sew new aprons. They were already cut out but even so, I was surprised to find that I'd made a dozen by mid-afternoon.

We worked next to the laundry and it was entertaining to watch the various women employees fold enormous containers of clothes and bed sheets. They didn't all speak English and so I don't know what they talked about on their lunch and coffee breaks. However, I saw one young girl hold up an evening gown amidst many oh's and ah's from her friends. It took the place of words.

Lancaster Farming's Favorite Recipes

Well, we did it. Finally, after two weeks of reminders, 14 full - time and part - time Lancaster Farming staff members turned in their favorite recipes. It wasn't easy remembering, but only a few people forgot, and printed below is the pot pourri of favorites. Along with the recipes came a few stories, as well.

For instance, when Dieter Krieg, editor, heard of this week's theme, he found himself in a dilemma - how was he going to choose a top favorite out of 1001 favorites? (He is known for his appetite, by the way.) After some deliberation and a phone call to his mother in Florida, he came up with the roast duck recipe below. He also gave me a second recipe, just in case there was any space in the paper, which there wasn't.

And, Joyce Bupp and Jay Miller both came up with the same favorite - cherry cheese pie. Since Jay had already handed his in about a week earlier, Joyce came up with the sausage - macaroni casserole you'll find below, which she says never makes the six servings it boasts of in her family because they love it so much.

The stories are endless - the pizza recipe in the column has made Joan Young the favorite pizza maker in her family, and Susan Kauffman's egg custard recipe has sentimental value because it was connected with her first direct contact with Lancaster Farming.

Now, my recipe, on the other hand, has no sentimental value - it's just the best banana cream pie I ever ate and the easiest thing I can ruin my diet with. Hope you try the recipes below and enjoy them - after all, they are guaranteed.

Joanne Spahr
Associate Editor

Main dish foods

CHICKEN DIVAN

4 chicken breasts, boiled
1 package frozen broccoli, cooked
1 large can evaporated milk
1 can (4 oz.) mushrooms
1 can cream of mushroom soup, condensed
1 teaspoon curry powder
3 tablespoons mayonnaise
1 teaspoon lemon juice
Salt and pepper to taste
Bread crumbs

Cook and debone chicken. Combine milk, mushrooms, condensed soup, curry powder, mayonnaise, lemon juice, salt and pepper in a blender. After blending, cut up a half pound of cheese and mix with sauce from blender. Save some cheese for on the top. In a casserole, alternate chicken, broccoli, and sauce. Do this twice, and top with cheese and bread crumbs. Bake at 350 degrees F. for ½ to ¾ of an hour.

Sally Bair
Feature Writer

JUST PLAIN PIZZA

1 package yeast
2 cups warm water
2 teaspoons sugar
1-½ teaspoon salt
3 tablespoons oil
6 cups flour

Dissolve yeast in warm water. Combine sugar, salt, and oil and mix. Add dissolved yeast mixture and flour. Mix and knead dough. Place in a greased bowl and put in a warm place to raise for several hours. Then, roll out on a cookie sheet. Use pizza sauce of your choice and add hamburger, seasonings, and grated cheese. Bake at 400 - 425 degrees for 20 - 25 minutes until done.

For ½ the recipe combine:
1-¼ teaspoons yeast
1 cup warm water
1 teaspoon sugar
¾ teaspoon salt
1-½ tablespoons oil
3 cups flour

Joan Young
Secretary

MECKLENBURGER ROAST DUCK (Entenbraten)

Wash and salt the duck thoroughly inside and out, using about one teaspoon of salt per pound of duck. The inside of the duck should be salted more than the outside. Unless it's an exceptionally large duck, don't use more than three teaspoons of salt for the thorough salting.

Next, prepare the stuffing which will be placed inside the duck from both ends. The stuffing consists of sliced cooking apples, sugar, cinnamon, raisins and finely ground dried bread crumbs. Use approximately one tablespoon of sugar for each apple used in the stuffing, one level teaspoon cinnamon for the entire mixture, and tablespoon finely ground bread crumbs for the entire mixture. Don't forget to mix in a handful of raisins. Stuff the duck with mixture of the above. Sew the openings of the duck shut.

Place the duck in the oven and roast for three hours at 350-375 degrees. During the first hour the cook must be careful to drain off some of the fat. After that, check the roast every 10 minutes and keep basting the duck in the juices (from the meat and stuffing). The skin of the duck should be brown when it's done, but not black.

Dieter Krieg
Editor

xxx

SAUSAGE-MACARONI CASSEROLE

1 (8-oz.) package of elbow macaroni
1 lb. of bulk pork sausage
½ cup chopped onion
½ cup diced green pepper
3 tablespoons flour
½ teaspoon salt
2 cups milk
2 cups shredded cheddar cheese

Cook macaroni in three - quart boiling salted water for seven to eight minutes. Drain well. Brown sausage in saucepan. Remove and reserve one-third of sausage. Saute onion and green pepper with remaining sausage. Stir in flour and salt. Slowly add milk and cook over medium heat, stirring until thick. Stir in 1-½ cup cheese. Combine macaroni and sauce. Turn into greased 2 quart casserole and top with ½ cup cheese and reserved sausage. Bake in 400 degree F. oven for 25 minutes until browned and bubbly. Makes six servings.

Joyce Bupp
York Co. Reporter

xxx

SPAGHETTI SAUCE

Lightly brown two pounds ground beef and one cup chopped onions in four tablespoons fat. Sear thoroughly. Add:
2 cloves minced garlic
½ cup chopped green peppers (optional)
5 cups tomatoes (or Juice)
2 cans tomato paste
1 bay leaf or basil
4 teaspoons Worcestershire sauce
2 teaspoons chili powder
2 teaspoons salt
½ teaspoon pepper
2 teaspoons sugar

Cook, covered, over low heat for two hours or more, stirring occasionally. Remove bay leaf for serving. Serve over spaghetti.

This recipe is right amount for one pound cooked spaghetti. It also works very well in the crock pot. Start early in the morning, simmer on "low" heat all day with no further attention needed until time to cook the spaghetti! Works very well to double the recipe to have some to freeze.

Circulation Department

Appetizers

GRANDMA'S RED BEET EGGS

1 dozen hard boiled eggs
1 cup sugar
1 cup vinegar
2 cups red beet juice and water
Pinch salt

Combine above ingredients. Place hard boiled eggs in juice mixture until flavor is suitable to taste. Refrigerate. For two dozen eggs, combine two cups vinegar, two cups sugar, juice from two jars of red beets, and little or no water.

Paste-up artist

xxx

Salads

ORANGE - CREAM FRUIT SALAD

1 (20 oz.) can pineapple tidbits, drained
1 (16 oz.) can peach slices, drained
1 (11 oz.) can mandarin orange sections, drained
3 med. bananas, sliced
2 med. apples, cored and chopped
1 (3-¾ or 3-⅝ oz.) package instant vanilla pudding mix
1½ cups milk
½ of 6 oz. can (one-third cup) frozen orange juice concentrate
¾ cup dairy sour cream

In large bowl combine fruits, set aside. In small bowl, combine dry pudding, milk and orange juice concentrate. Beat with rotary beater till blended, one to two minutes. Beat in sour cream. Fold into fruit mixture. Cover and chill.

Karen Enck
Secretary

POTATO SALAD DRESSING

2 tablespoons vinegar
1 teaspoon mustard
2 tablespoons mayonnaise
Sugar to taste (about ½ cup)

Mix above together in saucepan. Heat to boiling (will become clear). Pour over potato salad while hot. Refrigerate.

Mary Ann Blauch
Secretary

xxx

Desserts

APPLE CAKE

1-¾ cups sugar
3 eggs
1 cup oil
1 teaspoon cinnamon
1 teaspoon baking soda
1 teaspoon vanilla
2 cups flour
2 cups chopped apples
½ cup chopped nuts

Mix all ingedients except apples and nuts and blend until smooth. Blend in apples and nuts. Bake in a 13 x 9 inch pan for 35 to 40 minutes at 350 degrees F.

Topping:
1 envelope whipped topping
1 small package instant vanilla pudding
1 cup milk

Beat all ingredients until thick. Refrigerate.

CARROT CAKE

2 cups flour
1 teaspoons baking powder
1 teaspoon baking soda
1 teaspoon cinnamon
½ teaspoon nutmeg
¼ teaspoon salt
1-¼ cup oil
2 cups sugar
4 eggs
2 cups grated carrots

Mix well the sugar, eggs, and oil. Add carrots and mix again. Add flour, cinnamon, salt, and soda. Pour into two greased and floured eight-inch cake pans and bake at 350 degrees for 25 to 30 minutes.

Jodie Arnold
Typesetter

CHERRY CREAM CHEESE PIE

1 (9-inch) crumb crust OR
1 (9-inch) pastry shell
1 (8-oz.) package cream cheese
1 can condensed milk
One-third cup fresh or bottled lemon juice
1 teaspoon vanilla extract
1 can cherry pie filling

Let cheese soften to room temperature. Whip till fluffy. Gradually add condensed milk. Blend. Add lemon juice and vanilla extract. Pour into crust. Chill for two or three hours before topping with cherry pie filling.

Jay Miller
Advertising director

EGG CUSTARD PIE

3 cups milk
4 eggs
½ cup sugar
¼ teaspoon salt
½ teaspoon vanilla
Nutmeg or coconut

Scald three cups of milk. While that is heating, beat eggs, sugar, and salt together. After the milk is scalded, pour one cup milk into the egg mixture, making sure to stir as you pour, so that the eggs don't curdle. Then, combine this mixture with the rest of the milk. Add ½ teaspoon vanilla. Pour into unbaked pie shell and sprinkle with nutmeg or add one cup coconut. Bake at 450 degrees F. for 10 minutes, then in a slow 325 degree F. oven for 30 minutes.

Susan Kauffman
Feature Writer

Breads

OLD FASHIINED POTATO BREAD

1 cup mashed potatoes
2 packages dry yeast
2 cups warm water
¼ cup sugar
1 tablespoon salt
½ cup soft butter
7-½ - 8 cups flour
2 tablespoons melted butter

Sprinkle yeast in large bowl with warm water. Stir until dissolved. Add sugar and salt and stir until dissolved. Add one cup potatoes, ½ cup butter, and 3-½ cups flour. Beat at medium speed for two minutes. Gradually add four more cups flour. Mix with hands. Add a little more flour if needed. Knead for 10 minutes. Place in greased bowl and cover. Let double in size. Takes about one hour. Divide in half and roll out and make two loaves. Brush top with melted butter. Let rise in greased bread pans for another hour and bake for 30 - 40 minute at 400 degrees F.

Scales common malady of house plants

Several types of scale insects are common pests of houseplants.

Scales have a shell-like covering which protects their body. Some are oval, hemispherical, or shaped like an oyster shell. You may find them on leaves and plant stems.

Continued feeding of this insect results in poor growth and stunted plants. As scales feed they secrete droplets of a sticky liquid called honeydew, which puts a shine on foliage.

If you find only a few scales you can remove them by spraying with lukewarm water or by washing with soapy water, using a soft brush or cloth. Use two teaspoons of a mild detergent to a gallon of water.

For heavy infestations dip or spray plants with malathion, following label directions.

Add one-half teapsoon of a mild household detergent (not soap) to a gallon of spray to increase the wetting efficiency of the insecticide.

You may have to make several applications at intervals of three or four weeks to kill all the scale insects.

Dead scales may cling to a plant for a month or longer. Living scales contain juice when crushed. Dead scales become dry and chaffy.

Greenhouse course for gardeners

For propagating, many plants need small greenhouses to provide warm, humid conditions with plenty of light throughout the year.

There are two basic types of greenhouses, according to a Penn State University correspondence course on home greenhouses. They are the lean - to or attached, and the free standing. The lean - to is built against an existing structure. The free standing is not attached to any structure. Selection depends on your house structure and whether or not you use your home furnace for heat.

Artificial heat must be provided in a greenhouse. Hot air, steam, and hot water are some ways to distribute heat. Selection of heating system depends on size of greenhouse, fuels available, cost and personal perference.

To learn more about small greenhouse construction and management, you can study the Penn State course by mail. To enroll simply send $3.50 to "Home Greenhouse," Box 5000, University Park, Pa. 16802. Make checks payable to Penn State.

Snowmobilers called

HARRISBURG - During the midst of the winter season, when snowmobiling activities were at a peak, the Snowmobile Unit in the Department of Environmental Resources established a "Snowmobiler's Hot Line" to provide information on snow conditions.

This 24-hour service, which offered the latest information on snow conditions in five specific areas of the State which were known for snowmobile activities, was considered successful and handled a large number of inquiries through the end of February.

Not only were snowmobilers interested in the service offered, said Mrs. Doris Thompson, chief of the Snowmobile Unit, but also those persons planning cross country ski trips took advantage of the "Hot Line."

However, now that winter activities have drawn to a close, Mrs. Thompson said the Snowmobile Unit is interested in finding out how the service can be improved for next winter and is looking forward to receiving comments from winter sports enthusiasts across the Commonwealth.

Only written comments will be considered and should be mailed to: Snowmobile Unit, Department of Environmental Resources, P.O. Box 1467, Harrisburg, Pa. 17120.

Garden plots available

BROWNSTOWN, Pa. - The Brownstown Vo-Tech is offering to interested gardeners a plot of ground, 15 feet x 25 feet to grow vegetables. As before in the Governor's Anit-Inflation Garden Program, seeds for the garden will be made available for a nominal fee. There are 50 plots available this year and selection will be made on a first come first serve basis. If interested, contact the school at 859-1111. Leave your name, address, and telephone number.

BUILDING CONSTRUCTED BY OWNER

On being a farm wife - and other hazards

By Joyce Bupp

For years, I have promised myself to use up some of the fabric odds and ends flying around the house in storage boxes before the accumulation takes over the place. An inventory recently indicated that most of the leftovers were too small to make into clothing - but much too big and "valuable" to just throw away.

So the kids and I set up the ping-pong table in the basement and began piecing and pinning the assorted scraps into bed - size crazy quilts. Because some of the pieces are fairly large, the quilt progresses rapidly and we could complete one in just a few hours.

I was sewing the latest creation together the other day when I mentioned to Patty that farm women in the past sometimes used feedbags to make quilts.

"What's a feedbag?" she asked, eyes widening.

Launching into a 10-minute explanation, I told her how animal feed was once delivered in bags made of colorful, printed cotton fabric. Then the thrifty housewives opened the bags, washed them and created aprons, tablecloths, pillowcases, etc.

"I can remember your Grandma making me snirts from them when I was a little boy," added her dad. "Mostly, very fine textured chicken feed was what the bags held."

Then I remembered material pieces my mother had given me several months ago-feedbag material stored a long time in her closet and now transferred into ours. After digging them out, we showed the youngsters how the bags had been constructed and where the fastening strings could be pulled out to open the yardage into a flat piece.

Patty had seemed very interested in the entire discussion; suddenly she looked at me with a "so what?" expression on her face. Then turning to leave, she announced: "And that's how it was, folks, 200 years ago today."

Nothing can put an adult in his place better than a well-placed one - liner from a kid.

Leader needed for 4-H club

SHREWSBURY, Pa. - The Shrewsbury 4-H Clubs are looking for an area adult who is interested in serving as a leader for the summer canning project. The project would cover a period of about six weeks, and would incorporate the use of fruits and vegetables in abundance during July and August.

Potential leaders are asked to contact Mrs. Preston Gantz, Glen Rock R1, by calling 235-3095 or Mrs. Margaret Shaub, Shrewsbury, 235-3309.

AGWAY 840 X

"The best hybrid Agway has ever offered my growers."

NICK FERRANT, JR. AGWAY CROPS SPECIALIST

If you grow corn in Delaware, Maryland, Jersey or southeastern Pennsylvania, take a tip from Nick Ferrant. Be sure to include Agway 840X in your planting plans for '77.

In Nick's words, "In long-season areas, I doubt if any corn will beat this one when well grown. High yields of silage and grain, excellent standability and high-population performance . . . and medium-low ears that harvest beautifully."

Another of Nick's favorites? Agway 834X. A great long-season grain hybrid.

This year, put both in your corn program. Agway 840X and 834X will come through with the energy results you need and you'll find out that Nick really knows what he's talking about.

Agway Energy Kings... more milk making power.

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

MARCH IS NATIONAL PEANUT MONTH

What is round and firm and packed with protein? If you answer "peanuts", you're right! The peanut is a really nutritious nut that provides plenty of eating pleasure. And for 31 days in March it's going to be the top banana — oops! Since the 16th century when Spanish explorers discovered them in Peru, carried them back to their homeland and later traded them to the Africans, who brought them along on slave ships sailing to America. They've come a long way since the Confederate soldiers gathered around campfires and sang "Eating Goober Peas" during the Civil War. Nowadays you can get peanuts in and out of the shell, with and without skins, roasted or plain, ground into a chunky or creamy spread. And you can find them in cans, bags and jars. Obviously we Americans know a good thing when we taste it, because we each consume over nine pounds of peanuts yearly! If you haven't been holding up your end in the per capita consumption there's no better time to start than now during National Peanut Month. After all, it happens only once a year!

CHECKLIST FOR QUALITY MEN'S SHIRTS

Men's shirts have changed in the past few years, both in color and in fabrics used. The trend now is back to white or to the old-fashioned stripes. Colored shirts tend to be pastels rather than the darker colors of a few seasons back.

A trend back to wovens is also happening. Whether knits or wovens, cotton is being used in combination with polyester. Men seem to like the natural look and comfort of cotton, but its use may mean that more touch-up ironing has to be done.

Shirts which will wear well have the following features:

*A quality fabric has been used and is firmly woven or closely knit.

*Stitching is even, with about 12 stitches per inch in seams and in top-stitching on collar and placket edges.

*The collar points should be sharp and the collar should show no evidence of puckering.

*Front openings or plackets will have an interfacing which will require the same care as the shirt fabric.

*Polyester interfacing will not ravel or shrink after many launderings.

*Buttonholes will be firmly stitched, and buttons will be smooth and uniform in size.

*Picket hems should be stitched to give a finished appearance and to prevent lint from gathering in the top fold.

*Topstitching on the pocket should be done with small, even stitches.

*The shirt tail should be long enough to tuck in easily.

Horse club organizes

NEW RING GOLD, Pa. - Interested youths aged 8 to 19 are invited to attend the organizational meeting of the New Ring Gold - Andreas 4-H Horse Club, to be held March 16 at the fire hall, here. The meeting time is 7:30 p.m.

Schuylkill County Agricultural Agent David Kantner will provide general information about 4-H and club projects at the meeting. Leader for the newly formed club is Marianne Bitting.

Youths who are interested in joining the club are asked to call either the Extension Office in Schuylkill Haven or Ms. Bitting at 717-943-2232.

Officers elected

New officers were elected at the February 21 meeting of the Oxford 4-H Dairy Club which was held at the home of Eddie Breckbill. Taking on the presidency is Eddie Breckbill; vice presidency, Alan Mason; secretary's office, Bob Lamborn; treasurer's responsiblities, Susan Pepples; and news reporter's position, Bonnie Lamborn.

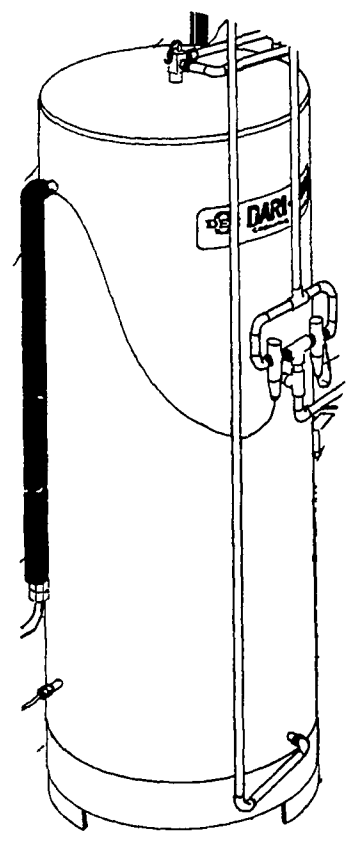
INTRODUCING

THERMA-STOR

Dairy Equipment Company Madison, Wisconsin has added a new energy saving Therma-Stor condensing unit to its Dari-Kool Bulk Milk Cooler Line.



The Therma-Stor is a major improvement in water cooled condensing units. This unit has an all stainless steel heat exchanger combined with a 150 gallon stainless steel storage tank. This unit provides enough 110 degrees water for preping cows and general use while milking. It also stores 110 degrees water for use between milking. In addition the Therma-Stor produces 50 gallons of 165 degrees for pipeline wash-up after milking. This unit is available with a single or dual condenser.

A NEW WATER COOLED CONDENSER - THERMA-STOR

For years water cooled condensing units have been used not only for bulk milk coolers, but refrigeration units of all types. The main reason water was used, was to lower the condensing temperature of the refrigerant. This increased the efficiency of the condensing unit.

Large quantities of 70 degrees - 80 degrees water was the useless by-product of these units. Because of the high original investment and maintenance cost, this style unit is not commonly sold on milk coolers today.

Then things changed. Energy costs have doubled on most farms in the last few years, 165 degrees F water now costs a dairyman ½ cent, to 2 cents per gallon. The average dairy uses two gallons of hot water per cow, per day for udder washing, sanitizing, washing equipment, feeding calves and general clean up. This means an average cost of $2-day or $700-year for a 100 cow dairy. This revived the water cooled condenser concept for dairy farmers. A modern dairy used 110 degrees water for equipment sanitizing, udder washing, rinse cycles on the pipeline and the bulk cooler, calf feeding and hand washing. Only the wash cycle of pipeline and the milk cooler require an elevated water temperature of 165 degrees F. The profile of usage on an average 100 cow dairy is 400 gallons of 110 degrees water and 70 gallons of 165 degrees water.

A water cooled condenser can deliver 165 degrees water, but the condensing temperature would be very high. The results would be poor efficiency and short compressor life. The lower the condensing temperatures, the higher the efficiency and the longer the compressor life.

One of the innovations on the market today generates a gallon of 100 degrees water for every gallon of milk cooled. It also generated 50 gallons of 165 degrees at each milking. This unit combines an insulated 150 gallon stainless steel storage tank and a stainless steel heat exchanger into one. The condensing temperature in this unit is determined by the 110 degrees water. The 165 degrees water is generated by desuperheating the refrigerant. Storage of the 110 degrees and 165 degrees water is necessary for usage at times other than milking.

A small backup 165 degrees water heater is recommended. There is no need for a backup on the 110 degrees water because excess is usually generated. The refrigeration system is very conventional regarding controls, valves and compressors. The condenser storage tank is the only special piece of equipment required. This condenser storage tank can be added to most refrigeration systems.

The investment of this equipment is returned by the savings in electrical energy in a year or two on the average dairy.

With the addition of Therma-Stor to an existing air cooled condenser refrigeration system your milk house can be partially heated and there is no water wasted. Average investment for a stanchion barn or small milking parlor will be in the $1300. area.

Recipe Swap

The "Recipe Swap" column is working out very well. This week we received requests for three more dishes. One request is for Snitz pie, another for meat pie, and third for scalloped potatoes. Says the contributor, "I have trouble making scalloped potatoes - the milk always curdles and it looks terrible. It does taste good, but it doesn't look appetizing. If there is anybody who has this recipe, I would appreciate it."

The recipes featured in this week's column are those for the Swedish Meatballs that a Lancaster Farming staff member requested. There are several different versions of the recipe printed this week, so maybe everyone can find the one they like.

SWEDISH MEAT BALLS

½ cup soft bread crumbs
½ cup light sweet cream
¼ pound ground veal
¼ pound pork
1 pound ground beef
1 tablespoon onion juice
1 teaspoon salt
¼ teaspoon nutmeg
4 twists of pepper mill
½ teaspoon white sugar
1 tablespoon melted butter
2 tablespoons butter for frying

Soak bread crumbs in cream. Mix all the meat together very well. Add onion juice, salt, nutmeg, pepper and sugar. Stir melted butter into milk bread crumb mixture.

Using the large end of a melon ball maker, form the meat mixture into little balls and place in a skillet in the butter. Shake skillet back and forth to brown balls on all sides. Can be served hot or cold.

xxx

SWEDISH MEAT BALLS NUMBER 2

½ cup bread crumbs
1 tablespoon onion flakes
½ cup milk
1 pound ground chuck
1 teaspoon salt
4 twists of pepper mill
⅛ teaspoon ginger
¼ teaspoon nutmeg
5 tablespoons cream cheese, room temperature
2 tablespoons butter
1 can cream of mushroom soup

Soak bread crumbs and onion flakes in milk. Mix meat with salt, pepper, ginger, and nutmeg. Add milk, onion and bread crumb mixture to meat and stir lightly. Stir in softened cream cheese. Use large end of melon ball maker and form into balls and brown in skillet with melted butter. Shake pan back and forth to brown balls. Then pour mushroom soup over them. Turn heat on low and simmer until soup is all melted. Serve with plain boiled potatoes.

xxx

SWEET AND SOUR MEAT BALLS

1 pound ground beef
1 egg, slightly beaten
1 teaspoon salt
Dash of pepper
2 tablespoons shortening
1 medium green pepper, cut into strips
1 medium onion, sliced
1-½ cups pineapple juice
¼ cup Heinz 57 sauce
Hot buttered rice

Lightly combine first four ingredients. Form into 16 meat balls. Brown balls in shortening. Add green pepper and onion. Saute until vegetables are tender. Stir in pineapple juice and sauce. Cover; simmer 15-20 minutes. Thicken sauce with cornstarch-water mixture. Serve over buttered rice. Makes four servings.

xxx

PORCUPINE BALLS

1 pound hamburger
4 slices bread
1 egg, beaten
1 cup milk
2 medium onions
2 sticks celery, chopped
¼ cup uncooked rice
2 cups tomato juice

Crumble bread and soak in milk. Add egg. Mix with other ingredients except tomato juice. Shape into eight balls and place in greased casserole. Pour tomato juice over balls and bake 1-½ hours at 350 degrees F. Serves eight.

Above four recipes by:
Harriet Greenawalt
Lancaster, Pa.

PARTY MEATBALLS

1-½ pounds ground beef
1 pound veal
1 (4-½ ounce) can deviled ham
1 small (two-thirds cup) can evaporated milk
1 cup (2 slices) soft whole wheat bread
1 tablespoon grated onion
2 eggs
½ teaspoon salt
½ teaspoon allspice
¼ teaspoon pepper
¼ cup shortening
¼ cup water

Mix all ingredients except shortening and water. Form 72 small balls. Brown in shortening in large frying pan, few at a time. Add water and simmer for 20 minutes after draining fat. Pour sauce over top and serve.

Dill Sauce (makes 2 cups)
2 tablespoons butter
2 tablespoons flour
½ teaspoon salt
1 cup water
1 cup sour cream
1 tablespoon catsup
1 tablespoon dill weed

Melt butter; blend in flour and salt; cook to boiling point; stir in water slowly. Boil one minute. Stir in cream, catsup and dill; heat just to boiling and serve.

Audrey Rohrer
Lancaster, Pa.

York horticulture club sees garden program

YORK, Pa. - Timothy Markovits, assistant county agent for York County, presented an educational program on horticulture to members of the York County 4-H Horticulture Club at a meeting held on February 21 at the Bair 4-H center. The program included information on soil testing and garden preparations. Selecting the right variety of plant was discussed. Things to remember when purchasing seeds and plants include; the use of the product, canning and freezing, resistance to disease and insects, hardiness, and maturity dates.

After the program, members planned their gardens on graph paper.

Jeff Roth, leader of the club, introduced the coming events for 1977 to the club members.

The club has decided to sell trees as a fund raising project. Varieties sold will include red maple, sugar maple, red bud, weeping willow, tulip tree, and white dogwood. The trees will be shipped directly to the purchaser at four to six feet in height. The price is $3.00. Orders may be placed with any 4-H Horticulture member or with Tim Markovits in the 4-H Extension Office in the Court House, phone 848-2101.

All 4-H members carrying the strawberry project are encouraged to attend a special meeting at the 4-H Center on March 1 at 7:30 p.m.

The next Horticulture Club meeting is scheduled for March 24 at 7:30 p.m. at the 4-H Center. The program will be slides from the National Jr. Hort. Association's convention. Megan Shaub will give the presentation.

Junior Cooking Edition

We have a lot of desserts in this week's column, and we also have a chili con carne recipe. Everything sounds good, and hopefully all the foods will be fun to make, and as good as they sound when they are finished.

CHILI CON CARNE

2 pounds hamburger
1 large onion
3 cups macaroni
32 ounces kidney beans
2 cups tomato juice
2 teaspoons salt
1 teaspoon pepper
½ teaspoon chili powder

Brown hamburger with onions. Season with salt and pepper; cook macaroni. Add to hamburger and tomato juice and chili powder and kidney beans. Simmer 10 minutes.

Elaine Martin
New Holland, Pa.
Age 14

xxx

APPLESAUCE CAKE

1 cup sugar, white or brown
½ cup shortening
1 egg
1 cup sifted flour
½ teaspoon salt
½ teaspoon baking powder
1 can applesauce
1 teaspoon soda
½ teaspoon cloves
1 teaspoon cinnamon
1 teaspoon allspice
1 cup raisins
¼ cup chopped nuts

Cream shortening. Add sugar, beating until light. Add egg and beat until fluffy, pour in applesauce and mix. Sift flour, salt, baking powder, soda, cloves, cinnamon and allspice together and add raisins and chopped nuts. Combine the two mixtures. Bake in a moderate oven at 350 degrees F. for 40-45 minutes.

Etta Zimmerman
Millmont, Pa.
Age 6

xxx

CHOCOLATE ICE CREAM

3 quarts milk
3 cups sugar
4 eggs beaten
4 tablespoons cocoa
3 tablespoons flour
1 pint cream
3 tablespoons vanilla

Heat all but one cup of milk and sugar until almost boiling. Combine flour, eggs, cocoa, and mix with one cup milk. Stir into the hot milk and continue stirring until it comes to a boil. Cool; then add vanilla and cream and freeze.

QUEEN ELIZABETH'S CAKE

Pour one cup boiling water over one cup chopped dates. Add one teaspoon soda, let stand while the following are mixed in usual manner:

1 cup brown sugar
¼ cup butter
1 beaten egg
1 teaspoon vanilla
1-½ cups flour
1 teaspoon baking powder
½ teaspoon salt
½ cup chopped nuts

Add these ingredients to first mixture and pour in a 9" x 12" loaf and bake 35 minutes at 350 degrees.

Icing:

5 tablespoons brown sugar
5 tablespoons cream
2 tablespoons butter

Boil three minutes and spread on cake. Sprinkle with coconut and nuts.

Tobacco to be auctioned

ANNAPOLIS, Md. - The 1977 Maryland Tobacco Market season will open April 13th and run through June 3th according to Maryland Secretary of Agriculture Young D. Hance.

Production estimates are that Maryland tobacco farmers grew 28.8 million pounds of Type-32 tobacco in 1976 and this is the crop that will go to market in 1977.

Maryland's 1975 tobacco crop, which was sold during the 1976 auction season totaled 24,150,000 pounds which brought growers approximately $23,800,000.

Shrewsbury 4-H hears AFS speakers

SHREWSBURY, Pa. - Gail Thoman, president of the Susquehannock High School American Field Service (AFS) chapter, addressed the Shrewsbury 4-H Club this month, as well as SHS exchange students Lissette Amado from Guatamala and Liesel Guttes from East Germany.

Upcoming 4-H activities at the county 4-H Center at Bair's Station include Lock-In Feb. 25-26; Family Fun Night March 12; National 4-H Kick - Off Week March 7-12.

Other activities will include a Baby Beef banquet March 19: Rural Life Sunday May 15; and P.T. Horticulture Assns. to meet at Penn State.

April 2 will be the Shrewsbury Club's mini roundup at the Railroad Borough Building. A covered dish supper will begin at 6:30 p.m. Committee members include Megan Shaub, chairman; Amy Norek, Kay Gantz, and Melanie Azbill.

Miss Shaub, the club's national award winner, will leave March 12 for Chicago to attend a commodity marketing symposim arranged for and announced by the National 4-H and the Commodity Marketing Symposium. The event is designed to help participants understand the principles of commodity marketing and how they apply to marketing.

Farm Women Societies

Lancaster Co. Society 4

Mrs. Ira Barley, Washington Boro, R1 was the "Mystery Guest" at the February meeting of Lancaster County Society of Farm Women 4 held on February 26 at the Farm and Home Center. She displayed and explained a large assortment of craft items to fellow members. Her favorite crafts included decoupage, scherensnitte, quilling, crewel embroidery, needlepoint, crochet, quilting, and rug hooking.

Other entertainment was provided by a quartet comprised of Mrs. Barley's family - two daughters, Jeannette Funk and Arlene Forney; a daughter-in-law-Martha (Mrs. Donald) Barley; and a granddaughter Cindy (Mrs. Fred) Barley. They sang several hymns and were accompanied at the piano by Mrs. Robert Garber.

The March meeting will be a luncheon honoring the county officers and Society 23. The luncheon will be held promptly at 12:30 p.m. at the Ironville United Methodist Church, Holly Drive. The Rev. Duane Steele will be guest speaker.

Lancaster Co. Society 11

Lancaster County Farm Women Society 11 met on February 24 at the home of Mrs. Verna Shirk.

Roll call was answered by 18 members and two guests.

Secretary and treasurer reports were given and approved. It was reported that eight members furnished 40 hours of work at the Easter Seals office.

March 21 was set to sew for Cancer Society.

Making a farm scene quilt was planned.

The program was an auction of one pound gift-wrapped packages.

Next month's meeting will be held at the home of Mrs. Mary Nolt, 931 Virginia Ave. Lancaster, on March 31.

Lancaster Co. Society 13

The February meeting of Lancaster County Farm Women Society 13 was held at the home of Mrs. Laura Denlinger, 28 Greenfield Road, Lancaster, with Mrs. Ethel Landis serving as co-hostess. Refreshments were served with "Valentine's Day" as the theme.

Mrs. Becky Buckwalter from Herbcraft, Scotland Road, Quarryville, displayed numerous herbs and spoke on their uses and medical purposes as used by our forefathers.

Envelopes were passed out for a bakeless cake sale. The group was encouraged to make crafts and to bake for a stand at the Dry Goods' Store, East Town Mall, on April 1, at 9:30 a.m.

Discussion on who to support for this year's project was also held. The Welsch Mountain Medical Center or LARC was brought up, but the discussion was slated for the next meeting of the group.

The group also planned to have a garage sale at the home of Mrs. Edna Myers, Bird-In-Hand, on May 6.

The next meeting will be held on March 12 at 1 p.m. for a luncheon at the Farm and Home Center, where the group will entertain Society 1 from Lititz.

Lancaster Co. Society 15

A slides show of the Farm Women trip to Hawaii last August was the featured entertainment of the get-together of Farm Women Society 15 on February 17. Elma Marele, a member of Society 15 went along on the trip, showed the slides. Thirty-four members were in attendance at the meeting which was held at th Union Presbyterian Church near Kirkwood. Hostesses were Bertha Ferguson, Jessie Trimble, Gertrude Weicksel, Evelyn Myer, and Colleen Shoemaker.

The business meeting was conducted by the president Mrs. Dorothy Johnson. Kathryn Wagner, chairman of the trip committee, received reservations for the evening at the Bakers Theatre on March 24 at 6:30 p.m. She also told of plans for a 10-day trip to the Ozarks in June. Other dates

Societies

(Continued from Page 63)

on Society 15's calendar are as follows: Feb. 24 - the group will serve refreshments at the A. L. Herr & Bro. Open House; March 17 - The Society will assist Society 14 with gifts for a visit to Conestoga View guests; April 7 - Society 15 will be guests of Society 20 for a covered dish luncheon meeting at the Quarryville Methodist Church at noon; March 17 - The next meeting of group will be held at the covenant United Methodist Church in Lancaster. The program will feature Doris Thomas with salad and sandwich demonstrations.

It was also voted at the meeting to give $100 to a couple in the community who lost their home by fire.

Lancaster Co. Society 18

On February 19, Farm Women Society 18 entertained Society 6 at the Farm and Home Center, Arcadia Road. Guests were paired with a member of the group doing the entertaining and for roll call each told how long they had been a member in the Society.

During the business meeting, the group voted to contribute $10 to Cerebral Palsey and the same amount to Easter Seals. Mrs. Martin Swarr, Landisville, read her essay entitled, "How a Farm Woman Ticks in 76."

Doris Thomas, home economist, gave the group timely tips and ideas for salads. She prepared several as she spoke. These were later served as refreshments.

Next month the group will attend the Hershey Community Theater to see "Oklahoma." Husbands will be guests.

Lancaster Co. Society 26

Lancaster County Farm Women Society 26 met on February 18 with their husbands to celebrate the anniversary of the Society.

Thirty-six people met at the Host Corral for dinner and a show, which was a mystery entitled, "Catch Me If You Can."

On March 12 the group will be entertained by Society 7. The next meeting will be held on March 24 at the home of Edna Garber, Marietta.

Lancaster Co. Society 27

The Lancaster County Farm Women Society 27 met at Lehman's Rest Home, Rheems, for their February meeting. Refreshments were served to guests and members. The program for the guests consisted of devotions by Lucy Frey; music selections by Mark, Melanie, and Marcy Miller; a skit by Cindy Brubaker and Jodi Brubaker; and games led by Mrs. Fran Sauder. The program concluded with group singing.

During the business meeting, it was decided to send a love gift of $35 to Linda Kauffman, who is in England for two months of service.

The group's next meeting will be on March 25. Ventriloquist Steve Brubaker will provide the program.

Lancaster Co. Society 28

The February meeting of Farm Women Society 28 was held February 24 at the home of Mrs. Richard Herr, Ronks R1. Mrs. Lloyd Denlinger served as co-hostess.

Mrs. William Dean, chairman of the Ways and Means Committee, announced plans for a food stand at the farm machinery sale of J. Robert Hess, Strasburg R1, on March 3 and at the county plowing contest in July at the Kenneth Kreider farm, Strasburg R1.

Mrs. William Harnish, president, was in charge of the business meeting. She announced that the county convention will be held in November at the Farm and Home Center.

The speaker for the afternoon was Mrs. Michael Velevans who spoke and showed slides on "Village Life and Customs in Greece."

The next meeting of the Society will be a progressive supper on March 26 with the husbands as guests. The group will meet at Zimmermans's Hardware store in Strasburg at 6:30 p.m.

York Co. Society 7

York Co. Farm Women Group 7 made 385 bed pads that were donated to Pleasant Acres.

And $10 donations were approved for the Heart Fund, March of Dimes, and York-Adams Lung Association. A $25 donation was earmarked for the Four Diamonds Fund at Hershey Medical Center for a York County child.

The March meeting will focus on St. Patrick's Day. The meeting is scheduled for 7 p.m. March 8 at the East Manchester Township Building.

York Co. Society 20

York County Society of Farm Women, Group 20, will meet on March 8 at 1:00 p.m. at the home of Mrs. Clair Shaffer, S. Main St., Shrewsbury.

Rosalie Winter will serve as program chairman; and the meeting will be a safety theme.

Members are asked to bring a kitchen item for the Robert Strickler family, victims of a New Year's Day house fire.

Plans are being formulated for an upcoming trip to the York Day Nursery, where the Society will be presenting gift cot quilts they are making as a group service project.

Megan Shaub to head to Chicago for commodity marketing symposium

A 16-year-old Pennsylvania girl, who has doubled sales volume at her roadside vegetable stand every year for the last six years, has won an expense - paid trip to the 26th 4-H Commodity Marketing Symposium in Chicago on March 13-16.

Megan Shaub, of 350 W. Railroad Ave., Shrewsbury, was selected by the Cooperative Extension Service and will be among 25 4-H'ers attending the four-day educational event in the Windy City.

Megan Shaub

Young people from 39 states are eligible for trips to the symposium in the national 4-H commodity marketing awards program sponsored by the Chicago Board of Trade. The annual event brings together 4-H'ers who have completed outstanding commodity marketing projects during the last year.

Miss Shaub, daughter of Mr. and Mrs. Robert H. Shaub, is a high school junior. She plans to further her education in a horticultural or agricultural - related area.

The York County girl started her business six years ago with a five-step stand that she used to sell string beans to motorists.

"Today the roadside stand business has grown from a several - day operation to a four-month operation with regular customers coming from as far as Washington, D.C.," she said. "The five-step stand was replaced with a building, a former brooder house, then an eight-door refrigerator, a second brooder house, and finally a covered open-air sales area."

Miss Shaub, who sells produce from her 4-H garden for a cash profit, found that customers "expect to buy everything." She found it necessary to buy produce at the Baltimore wholesale produce market, which she sold along with her own produce.

She advertises in local newspapers and said she was "quite amazed at the many new customers I acquired." She also uses roadside signs to boost her volume.

The puppose of the Chicago symposium is to help participants understand the basic principles of commodity marketing, and how these principles apply to commodities sold in cash markets and traded in futures mark of major commodity exchanges.

The delegates will participate in seminars, tours and activities that explain the use of futures markets as a management tool and aid them in adapting market information and knowledge of market functions to ongoing 4-H projects.

Delegates will view audiovisual presentations on marketing topics, meet commodity traders and brokers, and tour the pit trading floor. There, they'll watch traders buy and sell cash and futures. The 4-H'ers will also meet officials of the Chicago Board of Trade and hear from floor traders and marketing representatives.

While in Chicago, delegates and their chaperones will tour points of interest and enjoy a special entertainment event.

The 4-H Commodity Marketing Symposium is arranged and announced by the National 4-H Service Committee.

Loan program for soybeans recommended by ASA

WASHINGTON, D.C. - The American Soybean Association (ASA) is recommending that "a permanent, mandatory loan program for soybeans" be included in 1977 farm legislation, according to testimony presented in Senate agriculture committee hearings last Friday.

"A loan program for most other major crops has been a permanent part of our national farm policy," said Seymour Johnson, chairman of the ASA board of directors. "The existence of a soybean loan program, however, has been at the discretion of the Secretary of Agriculture. As a result of this situation, there was one year - 1974-75 - when we had no soybean loan program at all."

Johnson said a permanent soybean loan program is needed to protect soybean farmers against total financial loss and to help them obtain commercial credit.

ASA asked, however, that the actual level of the soybean loan not be specified in the bill, but be determined periodically by the Secretary of Agriculture.

"A flexible loan level is required by the rather volatile nature of the soybean complex," said Johnson. "To be locked into one set loan level as specified by law could be detrimental."

He recommended that the secretary of agriculture consult with the ASA board of directors before setting the level of the loan.

"Our board, consisting of 40 bona fide farmers elected by soybean growers in 27 states, can give the secretary an excellent idea of the thinking of soybean growers throughout the country," said Johnson.

The board's current recommendation, he noted, would be a loan level at about 65 per cent of average total production cost, including land.

"This level is just high enough to provide a minimum protective floor for soybean farmers, but it is low enough to ensure that farmers will not be growing soybeans for the loan," he said. "The loan should never subsidize the inefficient."

Johnson made it clear that a loan level significantly above the 65 per cent level would be opposed by ASA.

ASA also recommended that Congress:

-Extend the soybean loan period to 36 months.

-Include soybeans in an improved federal crop insurance program.

-Continue to exclude soybeans from any acreage allotment or target price programs.

-Enact stronger protections for farmers against embargoes and other export controls.

-Keep soybeans free from government controls, including any government - controlled reserve program.

Johnson presented similar testimony before the House agriculture committee March 1.

Potatoes in storage higher than last year

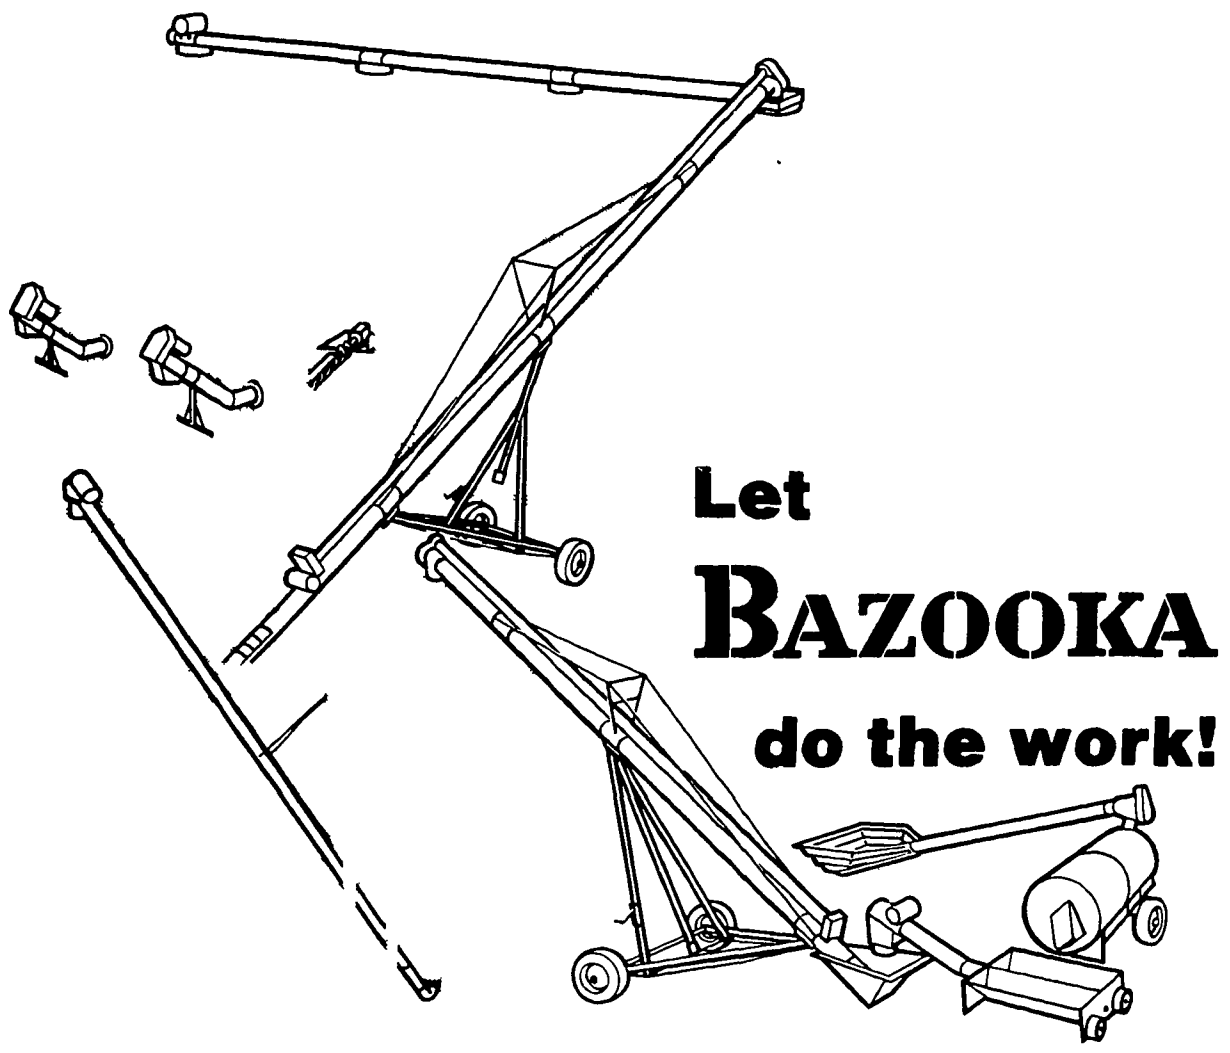
HARRISBURG, Pa. - Potatoes in storage on February 1 are estimated at 2,750,000 hundredweight in Pennsylvania, 47 per cent more than a year earlier, according to the Pennsylvania Crop Reporting Service. The stocks represent 39 per cent of the state's revised fall potato production estimate.

Stocks at this time last year amounted to 27 per cent of the 1975 production. Disappearance since harvest equals 4,390,000 cwt.. of which 800,000 cwt. took place since January 1.

U.S. stocks of potatoes for all uses held in storage by growers, local dealers and processors in the fall production areas totaled a record high 139.7 million cwt. on February 1. This is 10.6 million cwt., eight per cent above the 129.1 million on hand a year ago. The stocks are 6.5 million cwt., five per cent more than February 1, 1975.

Stocks in the eight eastern states on February 1 totaled 20.2 million cwt., down six per cent from the 21.8 million cwt. on hand a year earlier.

Disappearance of the 1976 fall crop to February 1 totaled 157.8 million cwt., excluding Nevada, up 10 per cent from the 142.9 million cwt. moved during the same period a year ago.



Let BAZOOKA do the work!

BAZOOKA transport augers have chrome-plated intake flighting that doubles its life, a galvanized drive shaft that reduces maintenance time, and permanently lubricated, precision machined chain reducer drive with cast iron housing. Plus many other timesaving, convenience and safety features.

BAZOOKA transfer augers have important differences at the drive end, like heavy duty thrust bearings; machined, cast iron sheaves, and easily adjusted motor mounts supported equally on all four corners.

BAZOOKA sweeps and unloading augers can make quick work of emptying out a bin. Portable types can be moved from one bin to another while permanent types are driven by powerheads located outside the bin.

BAZOOKA Grainclean'r is a rotary type scalper/cleaner with a built-in fines collector.

Survey reveals opinions of today's farm wife

CHICAGO, Ill. - Farm women are sharing more and more in farm operation and management, but the man is still the boss on today's farm. And farm women tend to oppose the women's liberation movement.

These and other conclusions are based on a random sampling of 1000 U.S. farm wives and farmers who responded to a recent survey conducted by International Harvester's Farm Forum Magazine on the role of farm women today.

In response to the question, "Overall, do you feel that the amount of involvement of the farm wife in the actual operation and management of the farm has increased or decreased from what it was a generation ago," the answers were as follows: Increased - 82 per cent; Remained about the same - 10 per cent; Decreased - 8 per cent.

Asked if they believe it is necessary for the farm wife to take an active role in the business side of the farm operation to make it a success, two-thirds answered "definitely yes," and 30 per cent felt it was not necessary but it was helpful. Only 2 per cent said "probably not."

Yet, despite the more active role of women in farm operation and management, the man of the house generally has the last word. Respondents were asked, "In your own household, who is responsible for the major decisions on management practices and purchases directly related to farm or ranch operation?" The answers were as follows: Both the man and the woman share, but the man is ultimately responsible - 49 per cent; The man of the house - 31 per cent; Both the man and the woman share equally - 18 per cent; The woman of the house 1 per cent.

Most farm wives spend much of the time managing the home and family. When asked to describe the chief responsibilities of the farm wife in their own household,the responses were as follows: Her responsibilities are about equally divided between home-family and farm management operation - 50 per cent; Most or all of her responsibilities are concerned with managing the home and family - 44 per cent; Most or all of her responsibilities are concerned with management and-or operation of the farm - 4 per cent.

The respondents were divided on the question of women's liberation, with more opposing than supporting it. When asked how they felt about the women's liberation movement, only 7 per cent strongly favor it, and 23 per cent are somewhat in favor of it. More than a fifth (23 per cent) are strongly opposed to the movement, 18 per cent are mildly opposed, and 28 per cent are neither for nor against it.

A major role being played by many farm women today is that of working on behalf of agricultural industry in a variety of ways. Following are responses to the question, "How actively involved should farm women become in telling agriculture's story to non-farmers, and working for legislation to benefit farmers": Definitely should be actively involved - 54 per cent No more or less active than the man in the household - 31 per cent The man should have primary responsibility - 7 per cent More active than the man in a household - 6 per cent Woman should not be involved in those activities - 1 per cent.

Is there a trend for farm women to become more actively involved in community activities and organizations? The great majority (71 per cent) said yes, while 28 per cent said no.

TRY A CLASSIFIED

Grange seeks change of unemployment compensation

HARRISBURG, Pa. - The Pennsylvania State Grange has requested state officials to "look into" high costs of unemployment compensation insurance for farmers and some small business people.

The problem was presented to the State Insurance Commissioner William J. Sheppard by the Grange and concerned groups on February 18. State Agriculture Secretary Kent D. Shelhamer and members of the House Agriculture Committee also have been informed of the situation.

Unemployment compensation is especially difficult for the family-type farmer who occasionally hires someone to help harvest crops, or who needs help with other work when adverse weather threatens, J. Luther Snyder, master of the State Grange, explained.

For example, Snyder pointed out, a farmer who pays out $200 in wages for parttime help, would have to pay a minimum premium of $280 for unemployment insurance.

In 1974, legislation was enacted requiring unemployment coverage mandatory in agriculture if payroll exceeded $150 annually or 20 working days.

At first, the rate was two per cent of a farmer's payroll, or $2 for each $100 paid in wages. This rate was gradually increased until last year when it reached 5.8 per cent of the payroll, or $5.80 for each $100 paid in wages. On February 1, another increase became effective, raising the rate to 6.3 per cent, or $6.30 for each $100 of payroll.

The minimum annual premium of $280 actually provides for coverage, at the present 6.3 per cent rate, on more than $4000 in wages. Not many small farmers who need only occasional help pay that amount of wages in a year, Snyder pointed out.

It was his understanding, he added, that if a farm is not incorporated, the farmer himself and members of his family are not covered by unemployment compensation insurance.

Many small businesses that require only parttime help are affected in the same way, according to Snyder.

Drought plan proposed

MECHANICSBURG, Pa. - The Susquehanna River Basin Commission to emphasize development of water conservation policies in order to be prepared for drought periods such as the western United States is currently experiencing. The SRBC, which has regulatory authority to manage basin water supplies during a drought emergency, believes that the availability and implementation of such a policy can help residents and industries of the basin cope with drought conditions, if they occur, and reduce wasteful uses of water. The Commission expects to have a water conservation policy ready for public review and comment later this year.

When you need automatic feed processing, you need a total system.

We're total.

A Mix-Mill Farm Feed Factory is the "TOTAL" system for automatic-feed-processing. It comes in a variety of capacities to meet your individual requirements. For example, our overhead grain holding bins range in sizes of 12 to 400 ton capacities. Our automatic mixer/grinder is available in hammer mill or roller mill with 5, 7½, 10 or even 20 horsepower.

There's a wide range of optional equipment, too! Grain Bins, bulk tanks, bucket elevators, grain roasters, and auger systems, to name a few.

Your Mix-Mill Distributor is the place to go for automatic-feed-processings. Whether you make three (3) tons of feed a week or 400 tons or more everyday, there's a total Mix-Mill system just for you.

For more information on a total labor/cost savings system, use this coupon today!!

Food surveillance bill expected soon

WASHINGTON, D.C. - Food and the food industry is expected to come under investigation again soon with the introduction fo a new food surveillance bill. Coming on the heels of developments in the 94th Congress which witnessed numerous such bills, it is not surprising that a bill would be dropped in the hopper early in this 95th session, according to United Egg Producers, which reported this development in it s Feb. 24 newsletter United Voices.

A bill being developed by the Subcommittee on Health and Environment of the House Interstate and Foreign Commerce Committee, under the Chairmanship of Rep. Paul G. Rogers (D.-Fla.), promises to be more along the lines of the . Senate-passed food safety and labeling measure (S.641) of last year. That measure would have imposed new safety requirements on food processors and increased the Food and Drug Administrations food safety enforcement powers. It also would have required more information on food labels and provided legal authority for FDA regulations on nutritional, ingredient and date labeling.

According to information from Committee sources, the Committee bill is expected by the middle of March with hearings to follow shortly thereafter. The House did not act upon the Senate bill last year so it must go through both Houses in the new Congress.

Twin Valley FFA wins in county contest

ELVERSON, Pa. - Nine members of the Twin Valley Future Farmers of America earned awards in the Berks County FFA project record book contest. All vocational agriculture students and FFA members are required to keep a record of some project during the school year. These projects may be productive in nature (raising an animal or crop), may be a job (working for a farmer or agribusinessman), or may be supervised skill development at school (working in the nursery, orchard, or shop during study periods or after school).

Record books on these projects are judged by the vocational agriculture teachers on the basis of accuracy, completeness, and neatness. Books which earn awards in the county contests were then eligible to compete in the Pennsylvania contest, which took place this week.

The following Twin Valley FFA members received awards:

Ted Ford, first place, Supervised Occupational Experience; Jan Oatman, first place "Horse Production;" Doris Mast, first place, "Dairy Heifer Enterprise;" Harvey Bitler first place, "Six Enterprises;" Ray Cylcewski third place, "Supervised Occupational Experience;" John Sterner forth place, "Supervised Occupational Experience;" Dave Barth, third place, "Supervised Occupational Experience;" Sandy Jennell second place, "Supervised Occupational Experience;" Howard Griest, forth place, "Three Enterprise."

The Berks County FFA scrapbook contest was judged the same evening as the project record book contest. For the third year, the Twin Valley scrapbook, prepared by chapter reporter Jan Oatman and historians Sandy Shade and Debbie Ford, received first place.

"Let us never forget that the cultivation of the earth is the most important labor of man."

ATTENTION: DAIRYMEN

To save money and improve milk production

Feed Dairy Special 40XX

The key to efficiency in any dairy feeding program is getting maximum performance out of homegrown grains and roughages while keeping out-of-pocket feed costs down. That's why Vigortone developed Dairy Special 40XX for use in legume hay or haylage rations.

This potent pre-mix contains abundant phosphorus to balance off the high calcium content of these roughages and provides proper levels of other major minerals. trace minerals and vitamins.

Legume programs are well balanced with Dairy Special 40XX, and the need for supplemental protein is much less. Best of all, your cows soon respond to their full bred-in potential to produce milk.

Dairy Special 50XX for the dry cow

Proper nutrition for the dry cow is just as important as for the producing cow. It's during this period that the stage is set for the level of production she will have throughout the lactation period. Vigortone's Dairy Special 50XX is properly suited to fortify high roughage rations of dry cows and keep them in excellent condition right up to freshening.

See your Vigortone dealer soon

Your Vigortone dealer has several products and programs to promote better milk production and help you save money. See him soon.

Learn why more dairymen are feeding Vigortone — especially now.

LIQUID MANURE SPECIALISTS

PEARSON takes the work and waste out of manure . . . with Better-Bilt Liquid Manure Systems for hogs, dairy, beef and poultry.

• Two types of manure spreaders handle liquid, semi-liquid and heavy slurry fast and easy • Eight models, capacities up to 3150 gallons • Truck mounting optional for all models • Manure is spread over 35'-40' swath or injected into soil (up to 12") • Three PTO powered, heavy-duty pumps agitate and break up solid manure into massive slurry, pumps are reversed for filling spreader • Powerful mono pump is used in irrigation systems • Heavy-duty electric pump available

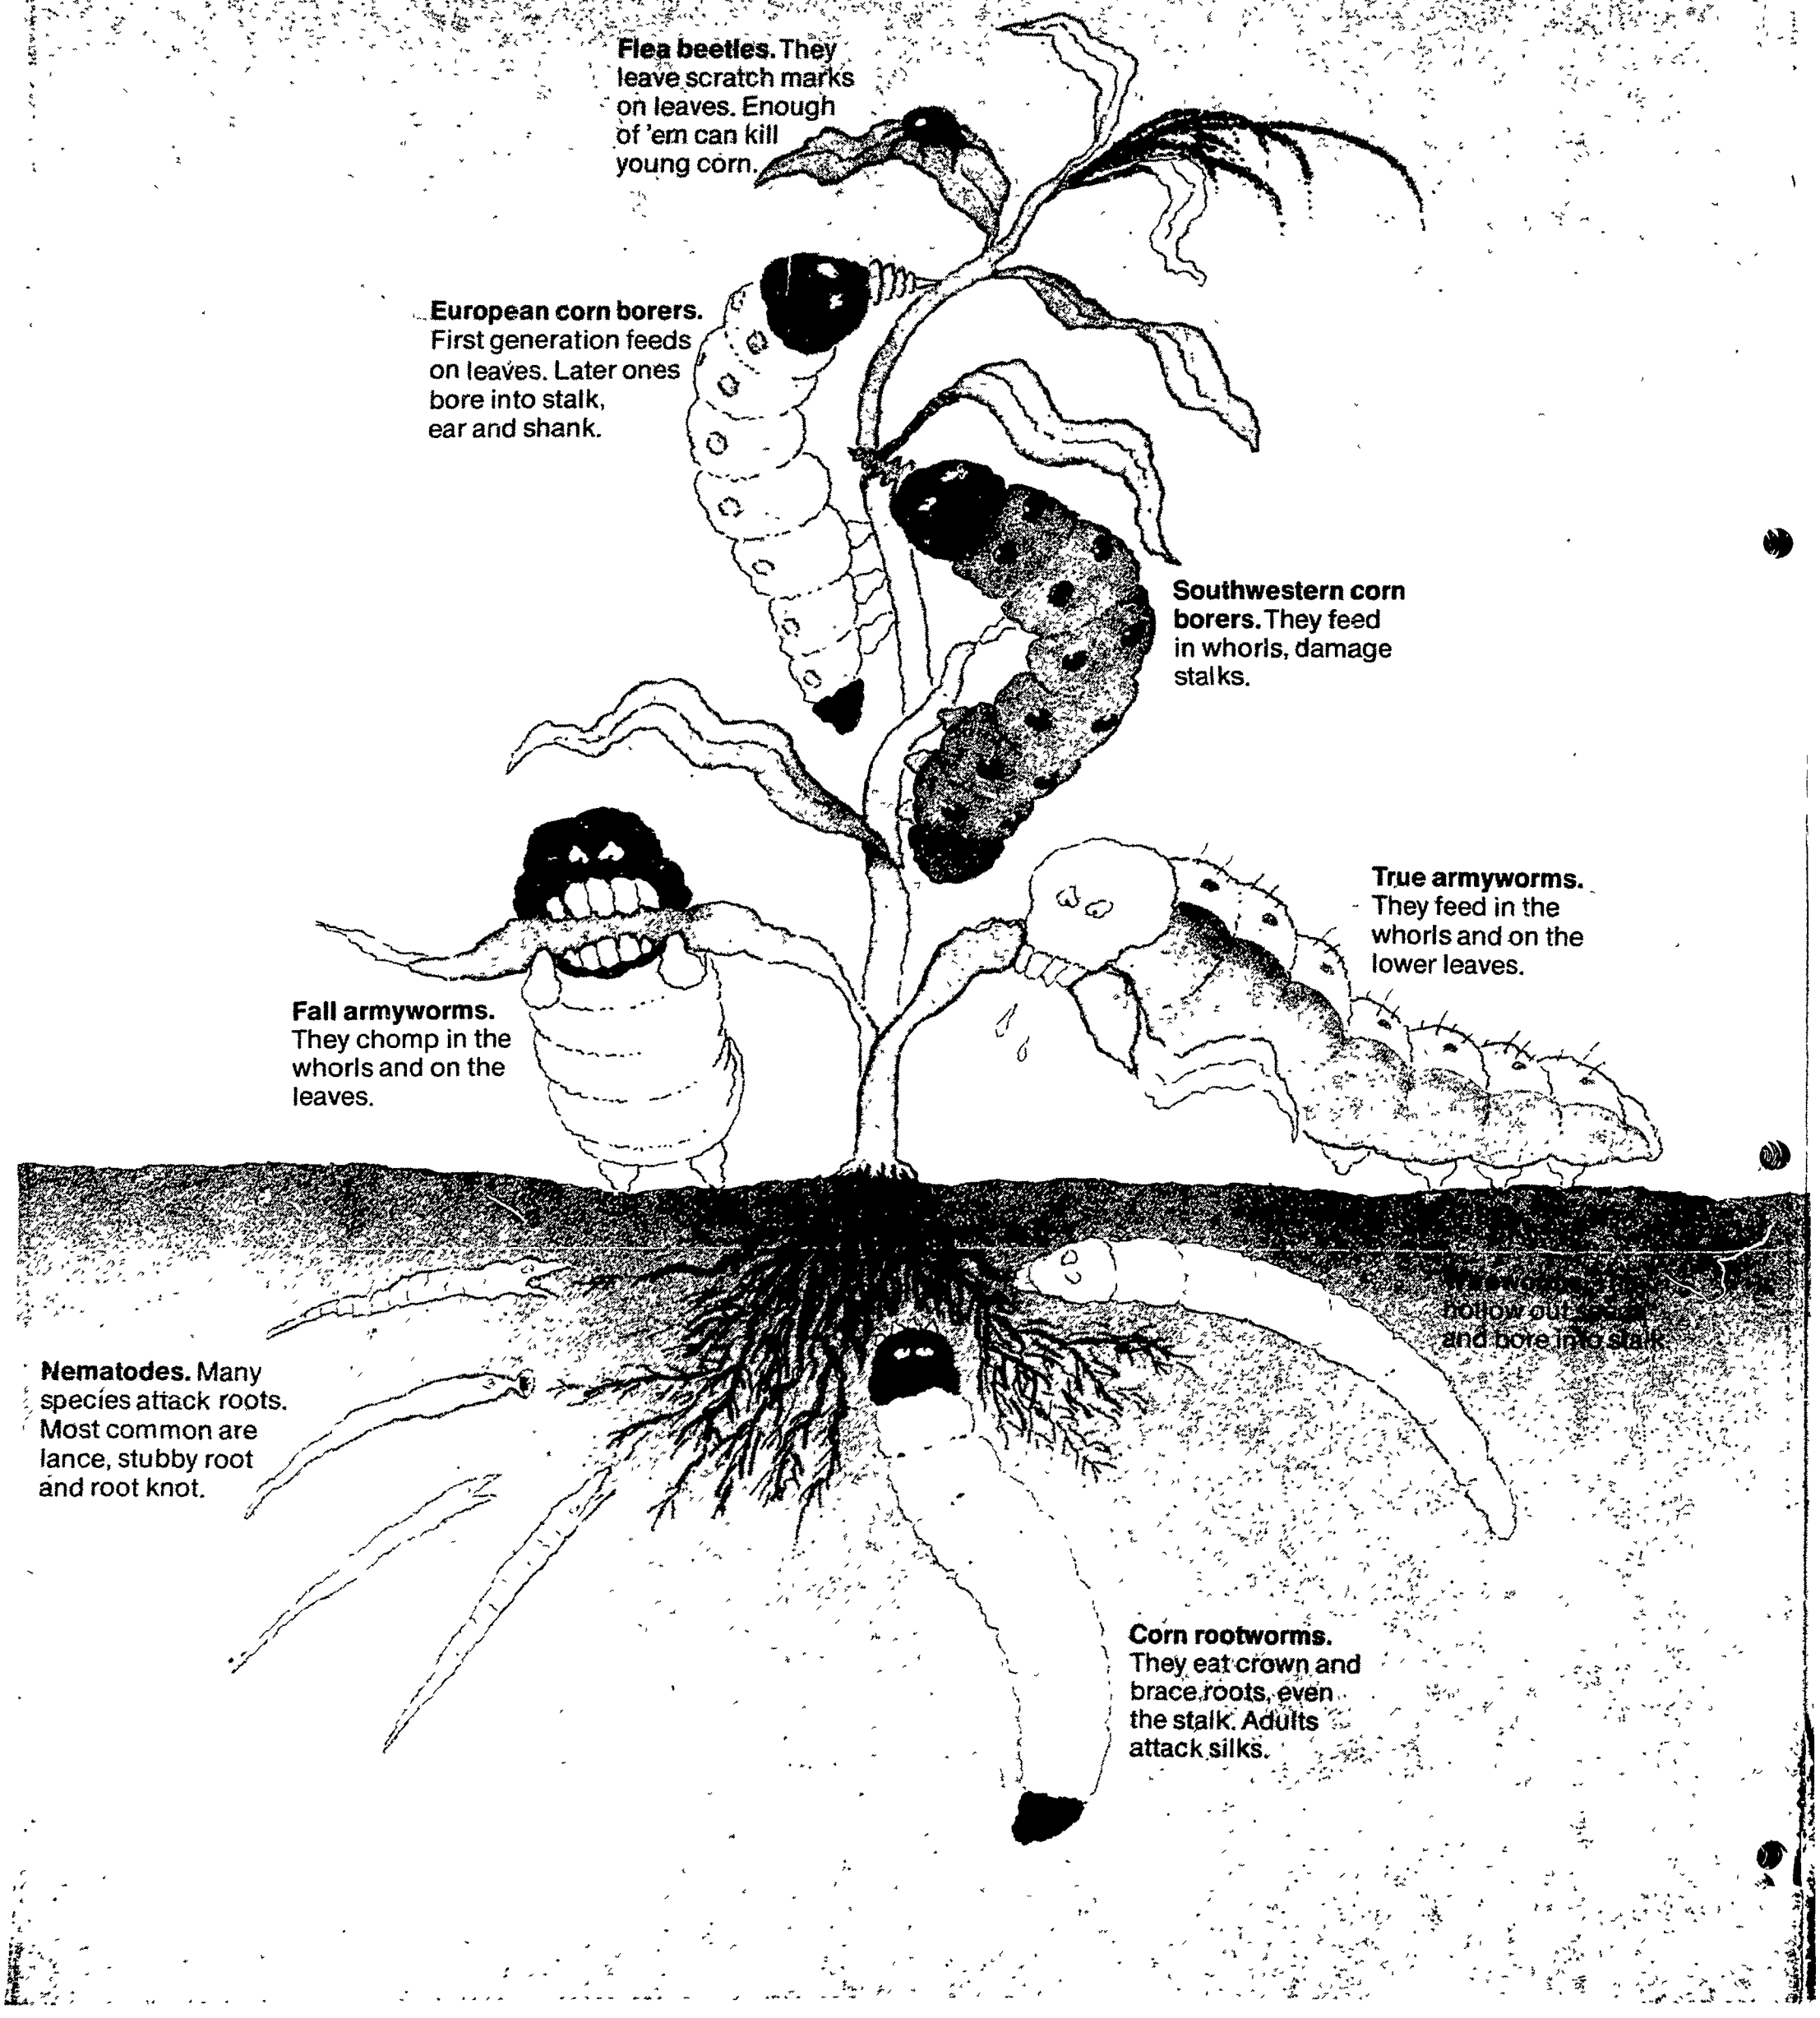
Starting with rootworm, corn
And blanket control comes only



Flea beetles. They leave scratch marks on leaves. Enough of 'em can kill young corn.
European corn borers. First generation feeds on leaves. Later ones bore into stalk, ear and shank.
Southwestern corn borers. They feed in whorls, damage stalks.
True armyworms. They feed in the whorls and on the lower leaves.
Fall armyworms. They chomp in the whorls and on the leaves.
Nematodes. Many species attack roots. Most common are lance, stubby root and root knot.
Corn rootworms. They eat crown and brace roots, even the stalk. Adults attack silks.

destroyers come many ways. with broad-spectrum Furadan®.

As sure as corn damage starts with rootworms, effective control starts with Furadan® insecticide-nematicide. A fact borne out by the experience of thousands of growers.

But while rootworm is your big enemy, your corn yields can also take a beating from many other pests. Pests that only Furadan can control in one fell swoop—European corn borers, Southwestern corn borers, fall armyworms, true armyworms, flea beetles, wireworms, plus eight species of nematodes.

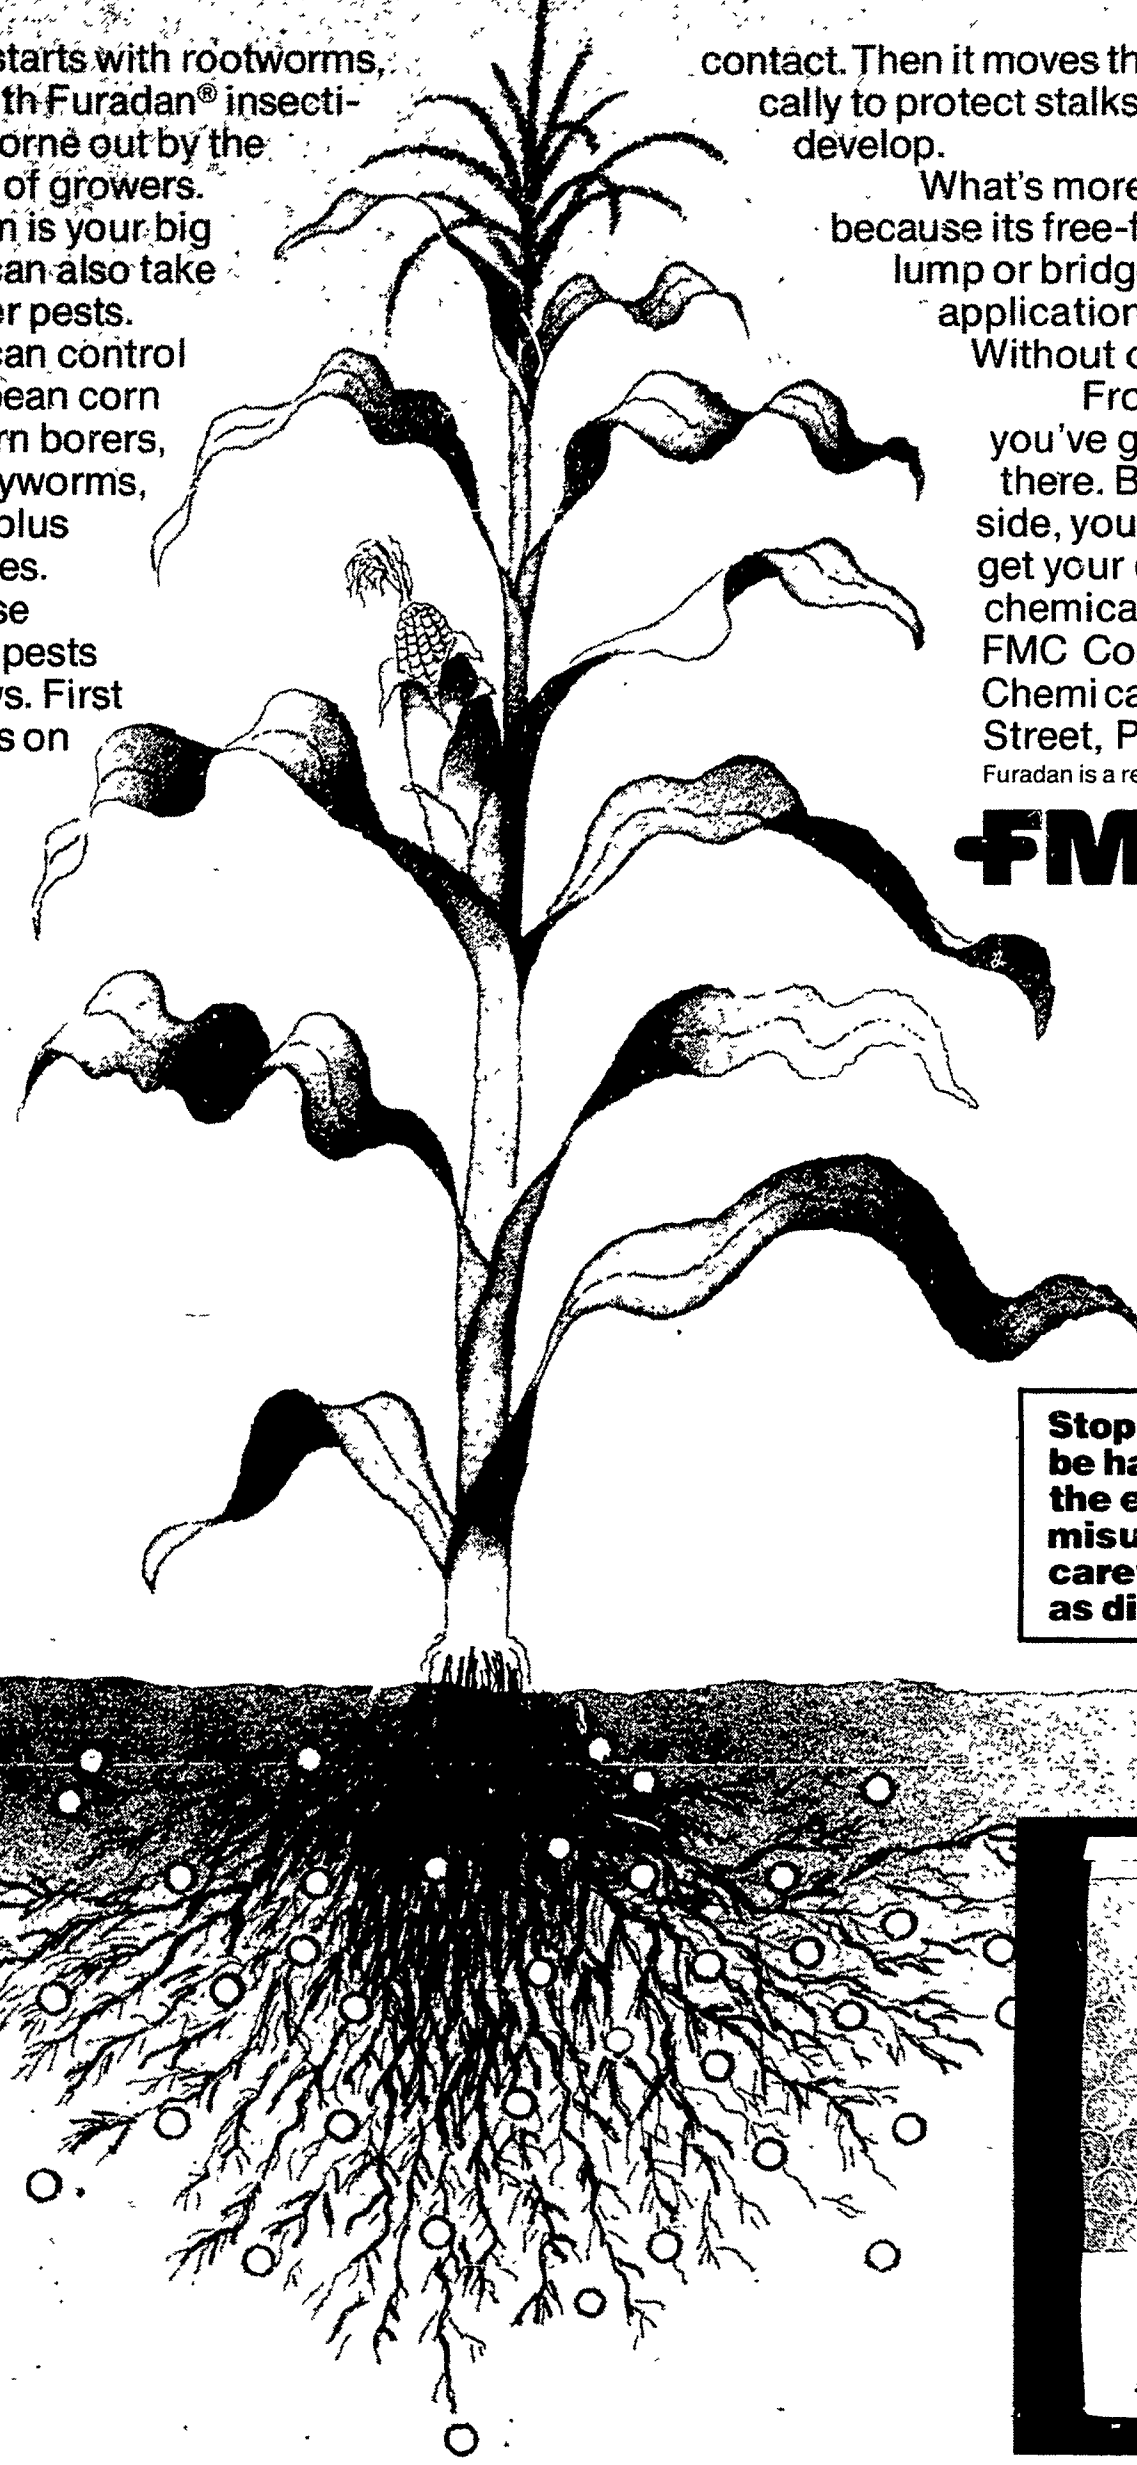
Furadan stops these above and below ground pests because it works two ways. First it controls many soil pests on contact. Then it moves through the plant systemically to protect stalks and leaves as they develop.

What's more, Furadan is easy to use because its free-flowing granules won't lump or bridge. You get uniform application throughout your fields. Without offensive odor.

From rootworm on down, you've got a lot of enemies out there. But with Furadan on your side, you control more pests that get your corn. See your farm chemical supplier, or write FMC Corporation, Agricultural Chemical Division, 2000 Market Street, Philadelphia, Pa. 19103.

Furadan is a registered trademark of FMC Corporation.

FMC Chemicals



Stop. All pesticides can be harmful to health and the environment if misused. Read the label carefully and use only as directed.

Furadan moves systemically through the plant to protect it from above-ground insects. It also controls soil pests on contact.

OUR EXPERTS ARE YOUR EXPERTS. Put them to work- FREE!

What's good, sensible feeding for one dairyman can be just plain extravagance for another.

That's why Beacon emphasizes "no-nonsense feeding".

By "no-nonsense" we mean profitable feeding, based on the needs of your herd, using as much as possible the feed available on your own farm, along with whatever supplements are needed for a complete nutritionally balanced diet.

How can you be sure you're feeding your herd well, and at the least possible cost?

We urge you to call upon the services of our dairy experts, in the field and at our headquarters in Cayuga. By all means, take advantage of our free roughage analysis.

Your Beacon Advisor will take a sample of your roughage and send it to our laboratory. There it will be analyzed by one of the dairy experts shown above—a man with a great deal of experience in animal nutrition. His analysis will be sent to you promptly, along with feeding recommendations based on your roughage quality and feed requirements.

There's no charge for the service and no one will try to sell you feed or supplements you don't need.

With Beacon feeds and Beacon's advisory service, your herd will get nutrients, not just ingredients.

A registered Holstein cow owned by Henry E. Kettering, Lititz R3, completed the highest 305 day lactation. Edna produced 22,275 pounds of milk, 961 pounds of butterfat with a 4.3 per cent test. Second high lactation was completed by a registered Holstein cow owned by John M. Harnish, 1036 Beaver Valley Pike, Lancaster. Sandra produced 20,580 pounds of milk, 934 pounds of butterfat with a 4.5 per cent test in 305 days.

The herd of R. Edwin Harnish, Christiana R1, had the highest daily butterfat average. His herd of 40 registered and grade Holstein cows averaged 49.1 pounds of milk, 2.23 pounds of butterfat with a 4.5 per cent test. The herd of Samuel K. Stoltzfus, Gordonville R1, placed second. This herd of 38 registered and grade Holstein cows averaged 55.2 pounds of milk, 2.20 pounds of butterfat with a 4.0 percent test.

GO Zero Concord FROM TEAT TO TANK!

NEW MODEL 70 s
Zero Concord
TWIN-VACUUM PIPELINE
MILKING SYSTEM
-WITH COW MONITOR
It's a combination of a new, revolutionary pipeline milking machine and the ZERO Completely-Automated Vacuum Bulk Milk Cooler.

The ZERO CONCORD is the only system that provides stable milking vacuum at the teat end — in parlor or stanchion barn — with a low or high, short or long, pipeline — and without injecting air into the milker units to move the milk. Only with stable vacuum and no air injection can you hope to reduce leucocyte counts up to 65% — increase milk production as much as 20% — and prevent off-flavor and rancid milk.

The safe, stable vacuum is made possible by a patented, scientific principle TWIN-VACUUM . whereby one vacuum milks the cows, and a different vacuum moves the milk through a separate pipeline into the bulk tank. In addition — thanks to ZERO's patented SPATTER-SPRAY Automatic Washer and new, improved, high-capacity, transparent milker unit — you have built-in, "push-button", visible self-cleaning and sanitizing of the entire system — without disassembling. And there are many other advantages.

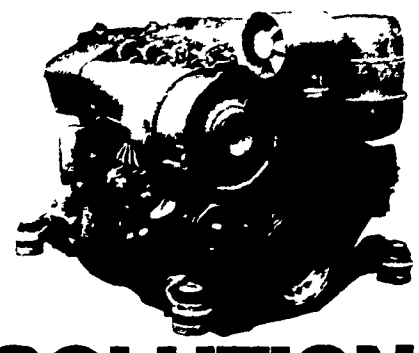
Zero - PIONEER OF FARM BULK MILK COOLERS

POLLUTION



SOLUTION

Over the years Deutz has developed a highly efficient combustion system that greatly reduces the emission of hydrocarbons and oxides of nitrogen. More complete combustion not only results in less pollution but in greater fuel savings. A happy combination. Buy or specify Deutz air-cooled diesel engines—10 to 500 bhp.

100TH ANNIVERSARY 1876 1976 DEUTZ FIRST FOUR STROKE CYCLE ENGINE

STAUFFER DIESEL, INC.

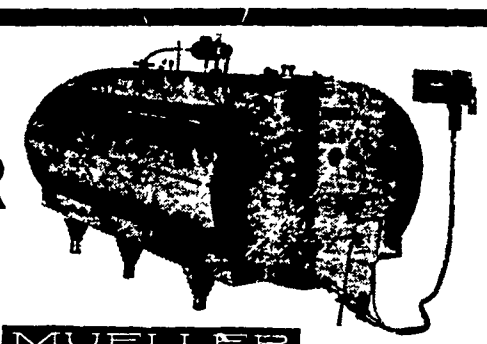
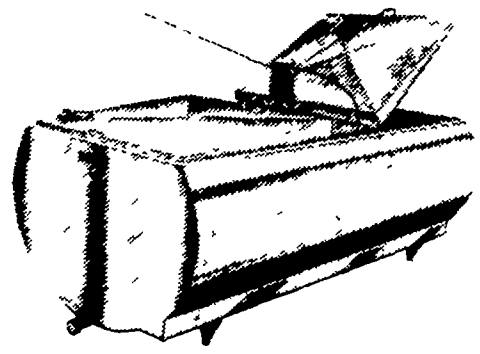
THE BULK MILK COOLER THAT HAS EVERYTHING



including AUTOMATIC WASHING SYSTEM!

The Mueller Model "OH" with HiPerForm cooling, Mueller-Matic Automatic Washing System, and built-in freeze protection control is the most advanced bulk milk cooler in the world. The nation's most progressive dairymen are using it. Shouldn't you be?



MUELLER NEW MODEL "MW"

The "MW" is one of the Lowest pouring Height Bulk tanks. Check with us all the added new features of the "MW" bulk tank.

If you are in the market for a bulk milk cooler and you don't check all the advantages of the Mueller Models "OH", "MHL," and "MW" you may be buying an obsolete cooler.

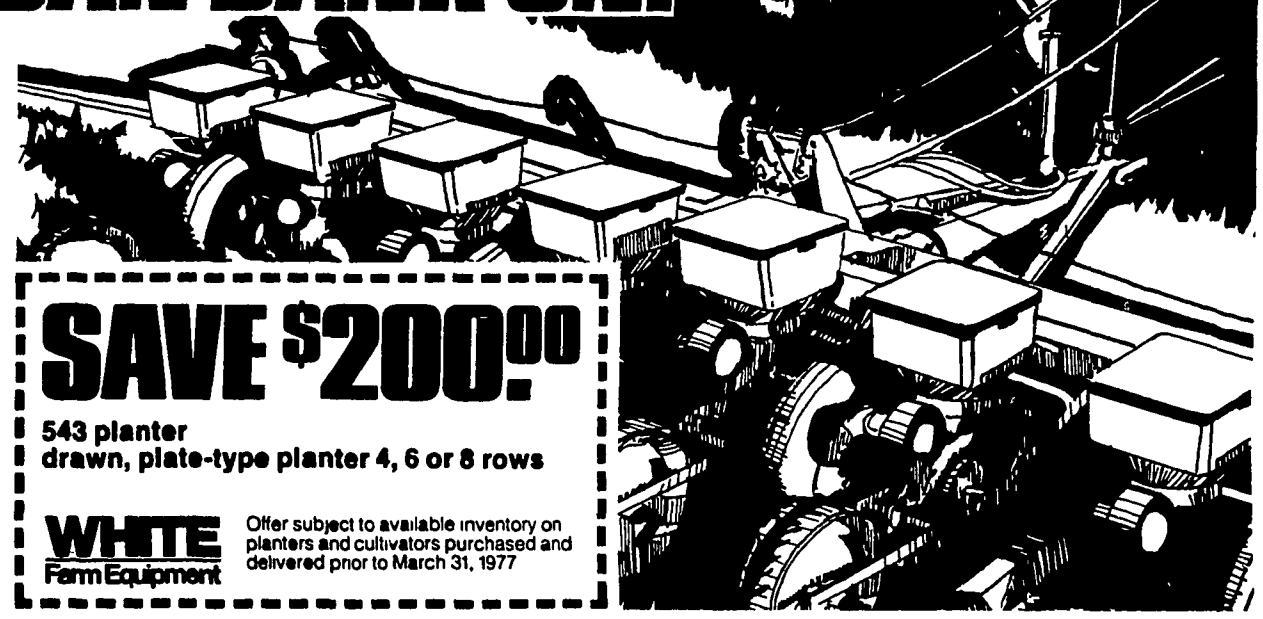
SAVE UP TO $800.00

HERE'S A PLANTER/CULTIVATOR OFFER FROM WHITE THAT YOU CAN BANK ON.



Here's a great opportunity to save from $200 to $800 on your 1977 production costs. For a limited time, all White planters... drawn, mounted or folding... plate-type or Plant/Aire... plus White's companion 374 row crop cultivator... qualify for special rebate allowances. If you were to buy an 8-row 3408 Plant/Aire and an 8-row 374 cultivator to go along with it for instance... your savings could amount to $800. Stop in today for the best offer going on new planters. And take the money you save and apply it toward your seed, chemical or fertilizer expenses. Make your best deal with us... and get your rebate check directly from White.

SAVE $200.00

Facts for dairymen

By Alan Bair
Assoc. County Agent
Lancaster, Pa.

Two weeks ago, while working with a dairyman in the southern end of the county, our conversation finally got to the subject of free stalls. This dairyman had some free stalls - if you call wet, soupy, odorous low spots in the floor free stalls! No wonder he had questions about concreting or putting mats in his new stalls. Most dairymen that are not happy with their clay free stalls have not learned how to build and maintain them.

Clay free stalls must be properly constructed if you expect them to last and keep the cows clean. Proper construction, in my estimation, must include a bedding board, a back-up board or rail, and clay in ample quantity that is tamped into the stall while it is damp.

The bedding board helps reduce tramped teats, helps to prevent gouging out of the stall, and helps to make it easier for the cow to get up. The board should be partially buried in the clay with at least two inches extending above the clay.

A back-up board or rail is a must. This simple device keeps the cow from comfortably standing all the way in the stall, and thus greatly reduces the amount of manure that you must remove from the stall. This rail in no way makes the stall less comfortable for the resting cow. Normal placement is 18-24 inches from the front of the stall on the top rail.

A lot of materials are successfully being used to construct the bed in the stall, including concrete, asphalt, rubber mats, and ground limestone. If we give a cow a choice she will generally choose a well constructed and bedded clay based stall. To my way of thinking, a comfortable cow will give more milk than an uncomfortable cow.

Damp clay must be tamped into the stall and built up to the point where the cow is laying uphill slightly. Did you ever see cows laying downhill in a pasture? This not only makes the cow more comfortable but also gives the stall some natural drainage.

Sure free stalls need some maintenance. In fact it only makes good sense to periodically - say once a year - clean out the old clay and bedding in the rear of the stall and start again clean. At our milking school held this Winter, a good dairyman from the Conestoga area made the remark that they do rebuild their free stalls every six months just to cut down on the possibility of building up mastitis organisms in the bedding and clay. I happen to know that those 350 stalls are in excellent condition to start with. If it's worth it to their cows, I'm sure it would pay you also.

No, clay free stalls are not maintenance free. Just like everything else on the farm that makes you money they deserve your attention. Clean, comfortable cows with less mastitis are your reward.

To do a good job of milking, it must be a pleasant experience for you and the cow. This was clearly brought home to me last week at the East Earl farm of Clyde Martin. I generally try not to bother farmers at milking time but just as I arrived, the Martins were starting to milk. Clyde said we could visit because the kids would milk while he and I talked. If everyone did as good a job milking as those kids, I would have a lot less mastitis work to do.

Admitting that they don't always have four people to help milk, Clyde did say the routine is always basically the same. The secret is that each person washes his or her own cow so they can get that machine on within that first 90 seconds of letdown. This helps the cows milk out fast which cuts down on stress. With four very competent young people running five units in a bright, clean barn with lots of good conversation, 73 happy cows were milked in just over an hour. Since they didn't take the time to overmilk their cows like so many of your neighbors do, they got to supper on time - that even made Mrs. Martin happy!

Summerdale lab improvements cut delay in livestock sales

HARRISBURG, Pa. - Cattle and livestock can now be tested in Pennsylvania to meet the requirements of almost any nation in the world, according to Pennsylvania's Secretary of Agriculture Kent D. Shelhamer.

Shelhamer said that the Pennsylvania Department of Agriculture has improved the capabilities of its veterinary diagnostic laboratory at Summerdale, so that consigners no longer have to wait for veterinarians to submit test samples to federal laboratories which would delay final test results.

"The Summerdale Laboratory provides an important service to our livestock producers in testing cattle and other livestock for export to other states and countries," Shelhamer said. During the past fiscal year alone, over 100,000 cattle and 17,000 other animals were sold out of state, and 1823 cattle were exported to foreign countries.

"All of these foreign countries have differing requirements for importation of livestock. And now the Summerdale laboratory has increased its facilities to promptly test and report almost any test requirement. The services of the lab are being strengthened by providing diagnostical capabilities in the field of toxicology so that we can be in an excellent position to provide complete veterinary diagnostic services, including the identification of toxic poisons."

Shelhamer said that the services of the laboratory are provided at a minimal cost to veterinarians and farmers. In many instances, the diagnostic service is provided free of charge.

The Summerdale laboratory has been operating under the Department of Agriculture since 1928, and in the past 50 years, has continually updated its methods to provide the most recent laboratory techniques to aid livestock producers in the Commonwealth.

More information about the Summerdale laboratory and the Department of Agriculture's animal diagnostic services can be obtained by writing to Dr. Charles Clark, BAI Diagnostic Laboratory, Summerdale, Pa. 17093, or by calling 717-787-8808.

SOYBEAN ROASTING ON YOUR FARM

For peak feeding value have your soybeans roasted.

(To kill toxic enzymes in raw soybeans.)

1 Roasted soybean (not just cooked), increases digestibility by 15 percent.
2. Increases weight gain for beef & hogs
3 Increases butterfat in milk & egg production
4. Improves animal health, reduces vet bill
5 Eliminates hauling to the mill & back to farm
6 Feed your own grown grain (Not exchanged with others).
7. Beans remain whole Store for months without losing any feeding value.

Fuel crisis may grow

WASHINGTON, D.C. - A long energy crisis could affect many facets of food production besides farming, according to a report released by the U S. Department of Agriculture's Economic Research Service (ERS).

ERS economists found that an energy shortage eventually would affect the farm supply and food processing industries, which together use more fuel than farmers themselves.

The study used an ERS model of the entire U.S. economy to assess several kinds of energy shortages. For natural gas in particular, impacts on the food and fiber system of a few months' shortage would be the most severe for the farm chemical and fertilizer input manufacturers. The impact on the food processing sectors would depend on the severity and length of the shortage. A 10 - per cent shortage of natural gas with no allocation could reduce the processing sectors' gross annual output three to 10 per cent. Based on the 10 - per cent reduction, overall gross income of the food and fiber system could drop about eight per cent for the year and employment by seven per cent.

ERS economists also weight the effects of different fuel allocation schemes against several public objectives policymakers might want to achieve. Alternative allocation schemes might not differ much in effects on the entire economy. But impacts on individual components such as the food and fiber system could differ notably.

FARROWING PIGS A PROBLEM — STOP LOSSES
HOUSE THEM IN A CASTLE

AVAILABLE WITH PIT OR PITLESS

SOW CASTLE... the new economical, plug-up-and-go total farrowing environment QUALIFIES FOR TAX INVESTMENT CREDIT

Models come 12 or 24 feet wide (24-foot model shown here), in lengths of 32 or 50 feet. All 24-foot wide buildings have an entry door in each end. See chart on back of this sheet for more specifications.

Built-in ventilation system keeps building dry and provides fresh air for animal health. Unique air flow system pulls air in at roof ridge line, circulates it over the top of the animals, through the pit, and out. Note that design of roof system eliminates the need for any massive bulkheads that could restrict air flow.

Each ventilation fan is located inside a plenum chamber, to pull air uniformly from pit area to the outside. Building remains virtually odor-free, because odor-laden air from the pit area does not enter living area of the animals.

Each farrowing stall has an adjustable sow feeder and automatic water cup. Nipple waterer is optional in place of water cup. Stall sides are adjustable to size of sow. Nursery feeders are provided for pigs.

Farrowing stalls and nursery areas are equipped with aluminum T-slats in the floor, front and rear. Individual slats are 1" across the top and 1" high, with 3/8" spacing between slats.

Bank Financing & Leasing Available

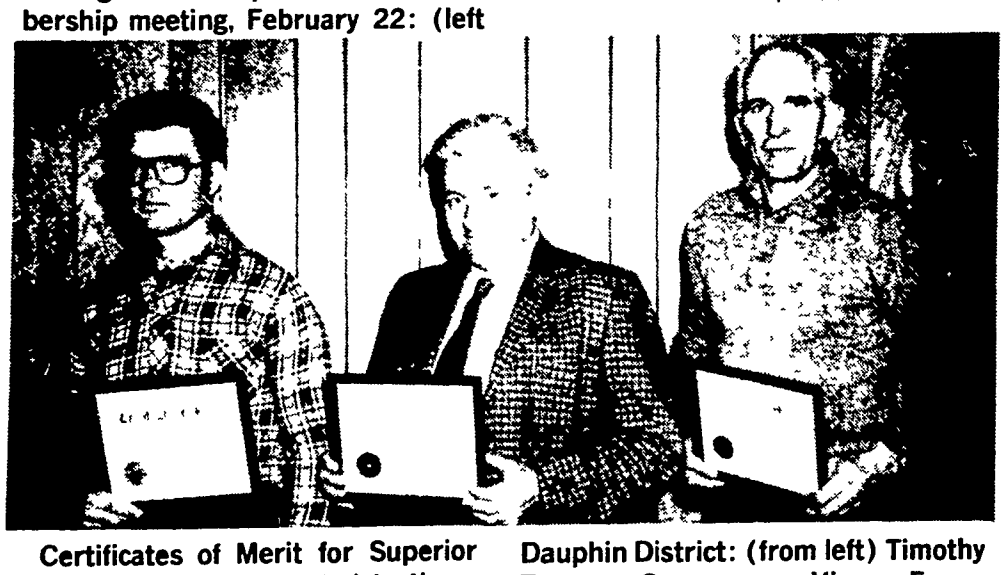
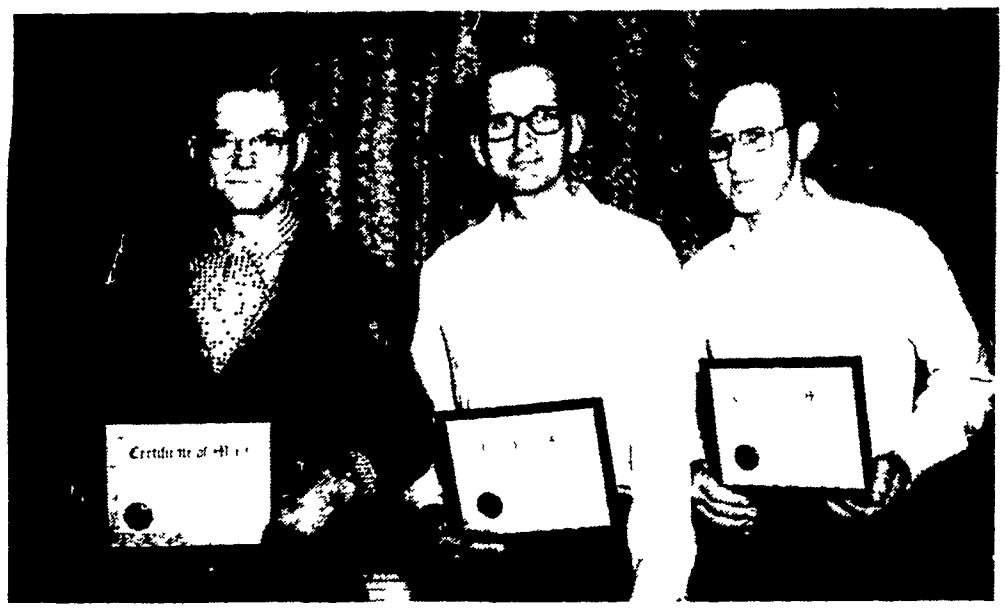
Atlantic presents certificates

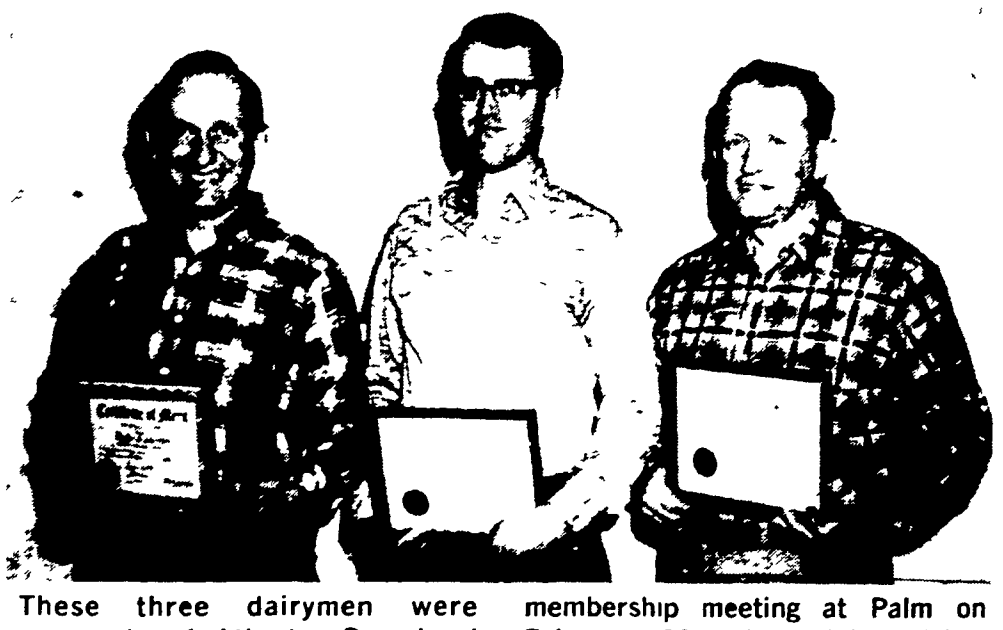
These northern Lancaster County dairymen received the Atlantic Breeders' Certificate of Merit for Superior Production at Blue Ball during the Cooperative's membership meeting, February 22: (left to right) Clyde Martin, East Earl; J. Earl Horst, New Holland; Arthur Wenger, Manheim; Paul Horning, Stevens; Elam Bollinger, Manheim; and Marvin Witmer, Lititz.



Certificates of Merit for Superior Production were presented to these dairymen attending the Atlantic Breeders annual meeting on February 24 for members in the Eastern Berks-Lebanon-Southern Dauphin District: (from left) Timothy Tyson, Conewago View Farm, Palmyra; Dallas Wagner, manager of Wernersville State Hospital herd; and Edwin Funck, Jonestown.



Chester County dairymen who received Certificates of Merit for Superior Production at the Stone Barn, February 23, during the Atlantic Breeders Cooperative annual membership meeting included (from left) Herman Stoltzfus, Cochranville; John S. Stoltzfus, Atglen; and Elmer Mast, Parkesburg.



These three dairymen were recipients of Atlantic Breeders' Certificate of Merit for Superior Production awards presented at the Bucks-Montgomery-Eastern Berks membership meeting at Palm on February 22· (from left) Walter Wurster, Ottsville, Harold K. Halteman, Telford, and P. J. Gehringer, Bally

York Farmers Forum lauded

By JOYCE BUPP
York Co. Reporter

YORK, Pa. - The West York Rotary Club honored the York County Farmers' Forum during the annual goodwill dinner held by the two orgaanizations of February 22 at Moser's Restaurant, here.

The progarm for the evening event was provided by Forum member George Goodling, Loganville, a former United States congressman from the 19th District. Goodling has retired to work his orchards in southern York County.

Howard Perry, program chairman for the meeting, introduced Goodling, comparing him to first President George Washington, on whose birthday the dinner was scheduled.

"Both George's have served their country on the battlefield and in the State House," explained Perry. "When they retired from public service, both went back to the land. They were both dedicated to serving their country; and neither ever brought shame to their country."

Goodling presented a slide - illustrated lecture on the Pennsylvania People-To-People Goodwill Delegation, in which he took part as a member during last July and August. The delegation visited on farms in England, Denmark, Sweden, Germany, Switzerland, Czechoslavakia, and the Soviet Union.

Although he had been forewarned of strict surveillance of visiting Americans while in the Soviet, Goodling felt that the constant watching of tourists has greatly diminished.

"We were allowed to go wherever we wanted," commented the retired congressman. "There was absolutely no way that we could all have been watched and followed."

He was disappointed in the small amount of actual agriculture that the delegation was shown during visits in the area of Moscow and in the southern Soviet state of Muldavia. A winery and its surrounding vineyards were toured; and after much pleading with guides, Goodling and other fruit growers in the group were allowed off the bus for a very brief look at fruit trees growing along the roadside.

"I think we did some good for this country," was Goodling's final analysis of the goodwill mission.

The Veterans Administration has been authorized to begin construction of eight hospitals in the next four years

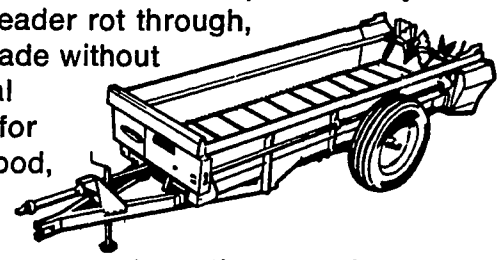
New Idea's Manure Spreaders

New Idea warranty covers wood and labor. (It even pays the freight!)

WARRANTY ON WOOD

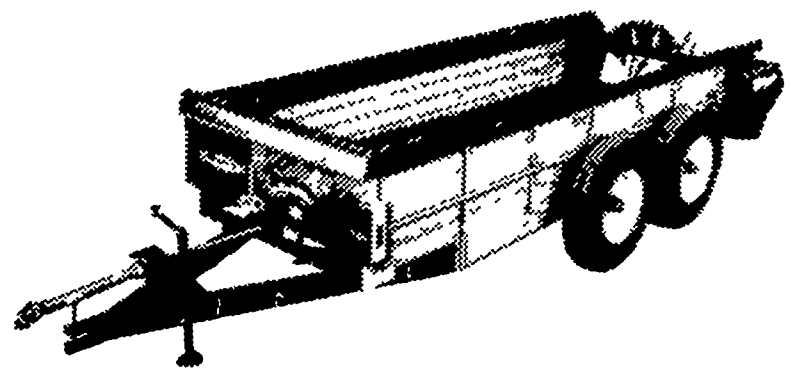
There's no double-talk with this warranty. In the unlikely event that any of the wood components in your New Idea Manure Spreader rot through, replacement will be made without cost to you, the original purchaser. No charge for labor, no charge for wood, no charge for freight. And this is in addition to the New Idea full year warranty on the spreader.



Wood lasts longer!
Can't rust!

New Idea's Manure Spreaders

10-ton loads mean fewer trips.



There's no need to spread as often as you do. Now you can spread 10 tons per trip — with New Idea's new 365-bushel manure spreader. You won't believe the capacity of this new heavyweight.

New Idea's 10-ton spreader is as dependable and rugged as all New Idea spreaders. And it's backed by the Full Year Factory Warranty. The extra heavy-duty conveyor chain is guaranteed for 2 years. Plus the famous New Idea Warranty on Wood. And, this spreader not only has a Belleville spring-type slip clutch that protects the power train—it also features an exclusive "Conveyor Overload Protection System."

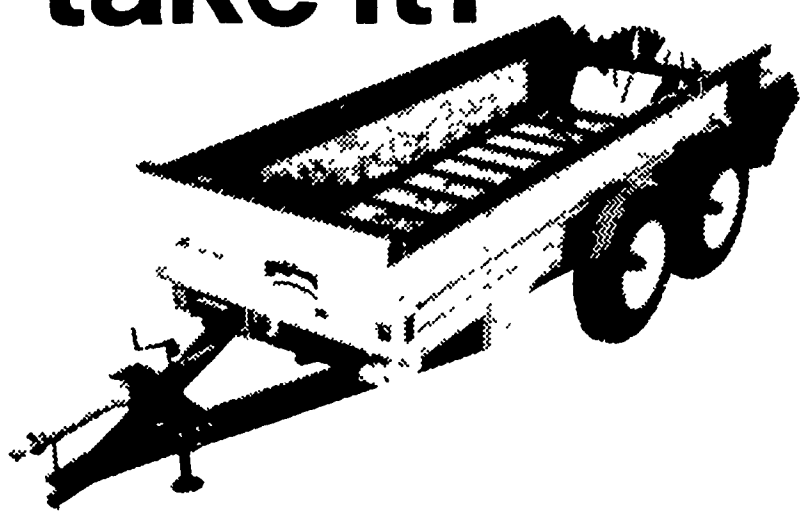
Maybe now's the time to trade up to New Idea's new 10-ton — and save yourself some field trips.

AVCO NEW IDEA FARM EQUIPMENT

We make your job a little easier.

New Idea's Manure Spreaders

Wood can take it!



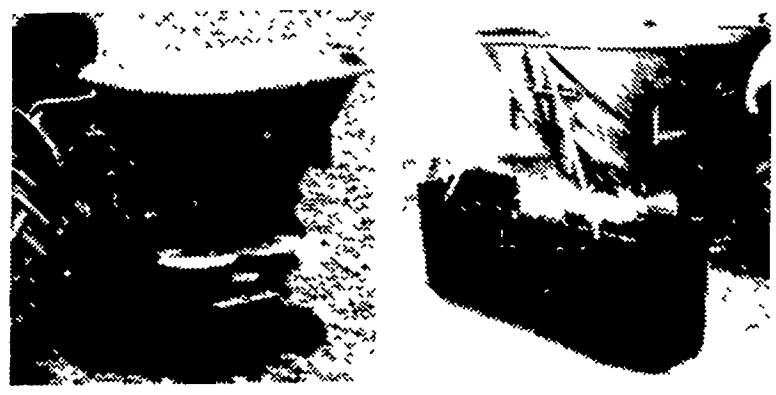
That's why they use Penta treated clear yellow pine in every New Idea Spreader box.

Every New Idea spreader in the line has wood sides, bottom and end . . . because wood can take it. Wood battles against damage. Wood won't bend, can't rust . . . and fights corrosive acids better than any other spreader box material.

Warranty On Wood That's why only New Idea says. "In the unlikely event that any of the wood components in your New Idea Manure Spreader rot through, Avco New Idea will make replacement, no charge. Replacement will be made without cost to you, the original purchaser, at your nearby New Idea dealer . . . no charge for wood, no charge for labor or freight."

New Idea's Fertilizer Spreaders

For Orchards or Vineyards



Optional attachments to New Idea's twin-spinner spreader makes it ideal for use in orchards or in vineyards. A side spread attachment eliminates the center portion of the spread pattern for use in orchards. The curtain attachment, adjustable from five to six feet, limits the spread width in vineyards. Without attachments you can spread up to 30-feet wide, or spread just to one side or the other by shutting off one spinner. It's quick and easy for one man to attach or remove from most Category I and II 3-point hitch tractors.

SEE DEALERS ON OPPOSITE PAGE.

Tractor safety taught

NORRISTOWN, Pa. - The Montgomery County Extension Service and the 4-H Clubs will offer a tractor safety certification course for area youth and there is still time to join. Under the Fair Labor Standards Act, all 14 or 15 year olds who plan to be employed off the home farm and will be involved in operating a tractor of over 20 PTO horse power, must have evidence of satisfactory completion of such a course before they can be employed.

The 10 hour course will begin on March 7th from 7-9 p.m. and continue for 4 consecutive Monday nights up to and including April 4. Classes will be held at the Western Montgomery Vo-Tech School in Limerick. Some previous driving experience is desirable. Although the course is geared to 14 and 15 year olds, anyone interested in learning about basic tractor safety is welcome to attend. To reserve space in the class, call the 4-H office of the Cooperative Extension Service at 277-0574.

Summary available

UNIVERSITY PARK, Pa. - A new summary from the 1976 Symposium on the Conversion of Poultry Waste to Energy, Feed or Fertilizer is now available. It includes papers on ensiling poultry litter, using poultry manure for vegetables, and hydroseeding to prevent erosion. Also papers on heavy metals in DPW, marketing converted manure, methane generation, references on research done with poultry waste and tables of chemical tests of manure samples sent to the Agronomy Laboratory. This summary is 33 pages long, includes an evaluation of the meeting and sells for $4 per copy. It may be obtained by sending a check for $4 made payable to The Pennsylvania State University and sent to 410 J.O. Keller Building, University Park, Pa. 16802.

BANVEL® + atrazine

New tank-mix combination kills young, tough broadleafs, vines, grasses before they damage your corn

Banvel + atrazine together do a broad-spectrum job on weeds resistant to 2,4-D and not controlled by atrazine alone.

Spray 3 to 15 days after corn emerges, when grasses are less than two inches. Ideal for narrow-row, minimum tillage programs. Season-long control. Usually no need to cultivate.

Today is the day to order Velsicol's Banvel plus atrazine as part of your corn-pest control program.

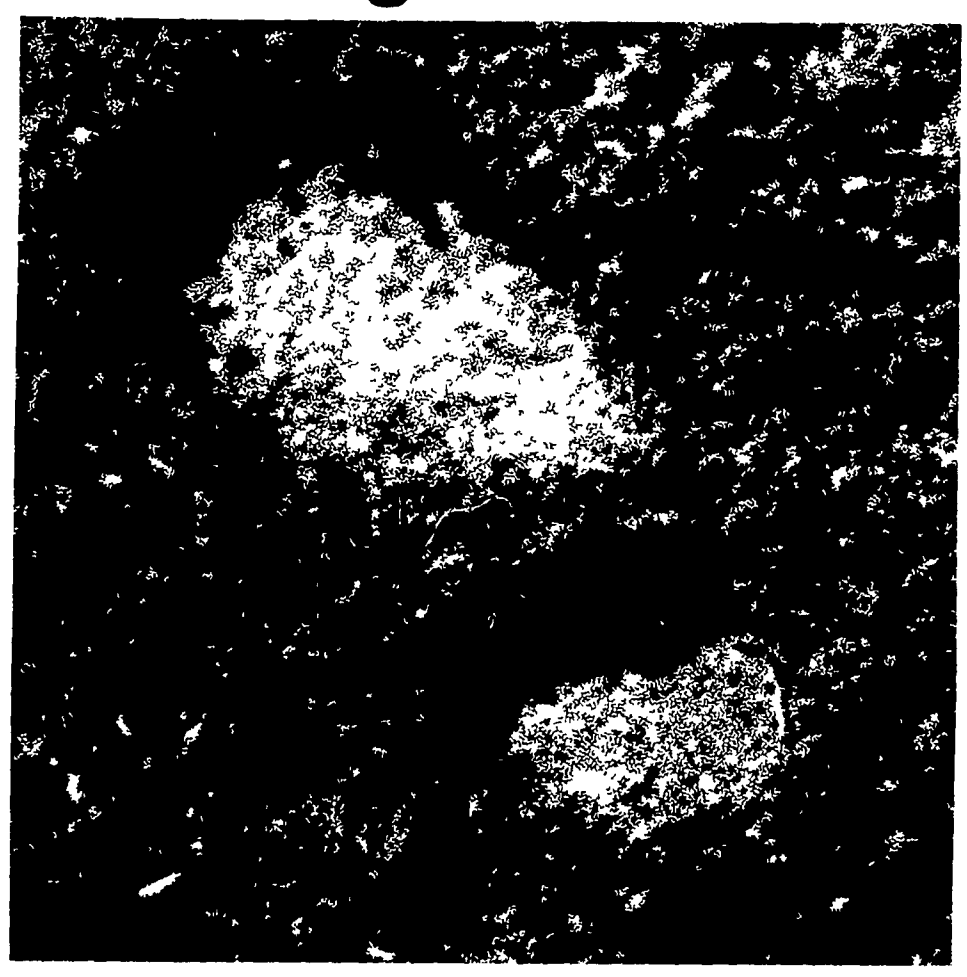
FERTILIZER AND
CROP PROTECTION CHEMICALS

BANVEL®+LASSO®*

pre-emergence herbicide



A giant step toward total weed control in corn.

EFFECTIVE CONTROL OF BROADLEAF AND GRASSY WEEDS WITHOUT CARRYOVER PROBLEMS

What degree of weed control will you settle for in your corn? Most of the thousands of growers we've talked with on the Banvel® "Hot Line" seem to expect at least 90 percent control And, most of them have been getting it with the pre-emergence, post-plant application of Banvel® + Lasso® tank-mix

An important advantage of this combination which growers appreciate is freedom from worry about carry-over, particularly following a year of droughty conditions

HOW TO ACHIEVE 90% OR BETTER CONTROL ON LABELED WEEDS

Here are the most important steps to successful results with Banvel® + Lasso® tank-mix

- Apply Banvel® + Lasso® strictly according to soil type and percent of organic matter The Banvel® + Lasso® label spells it out for you
- Incorporation is not only unnecessary, it is undesirable other than under extreme drought conditions, even then, incorporation should be no more than ½-inch
- If you apply Banvel® + Lasso® with liquid fertilizer, check compatibility of the liquids first by mixing proper proportions in a small container
- Use the right kind of nozzles and screens The label is specific on this point
- This combination should not be used on any sandy textured soils

*"LASSO" is a registered trademark of Monsanto Company The Banvel® + Lasso® tank-mix is cleared for use in Colorado, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Montana, Nebraska, New York, North Dakota, Ohio, Pennsylvania, South Dakota and Wisconsin

THE BANVEL® TOLL-FREE "HOT LINE" IS FOR YOU

Hay preservatives discussed at crops meeting

By LAUREL SCHAEFFER
Berks County Reporter

LEESPORT, Pa. - Pennsylvania's annual hay crop has an estimated value of $173 million, according to Lynn Hoffman, superintendant of Penn State's Rock Springs research farm. The University's farm manager spoke at the Berks County Ag Center recently as a part of the Crops and Soils Day activities.

Hoffman noted that approximately 1,900,000 acres are annually devoted to hay in Pennsylvania. Discussing the use of chemical preservatives on high moisture hay, the farm manager nevertheless maintained that the major factor in making good hay is total management.

"We need," he said, "a method to reduce the time involved in making hay." Liquid chemicals seem to be part of this answer.

A major question involved when using these liquid preservatives is where to put it on, Hoffman indicated.

Hoffman mentioned three good areas. 1. Having the spray nozzles on the hay conditioner so the hay gets sprayed as it comes off the crimper, 2. on the rake so it is applied when the hay is making it's final flip, 3. the most logical place, on the baler as the hay comes up over the pick-up and into the bale chamber.

"The uniformity of the distribution throughout the hay mass is most critical", stated Hoffman. He then went on to say that Penn State had good results with the liquid preservatives on hay up to 30 per cent moisture. The best rate he found was one per cent of the hay weight or 20 pounds per ton of hay.

"Calculating the amount of hay going through the baler at a given time to know the amount of spray to use is important," Hoffman told the audience. The importance of the uniformity of the windows to get an even distribution of the chemical was also noted.

In conducting experiments with the use of chemical preservatives, Hoffman kept a monitor on the heat produced by the high moisture hay when stacked in mows. "Heat may damage the protein if it is over 140 degrees F." Hoffman said.

The problems of the compounds were also discussed in the presentation: 1. the odor involved, 2. most of the compounds are corrosive, but they had not had any problem with the working parts of the equipment at Penn State. Hoffman warned the audience, however, to be careful when handling the solutions because they can eat paint off of the equipment. Other problems are skin irration and precision and consistency of application. Hoffman stressed the need to have the compound sprayed on the hay uniformily.

Hoffman also told the farmers that the chemical solutions change the color but not the quality of the hay. "You can't judge the hay by the color when using liquid preservatives" he said. The quality of the acid treated hay was comparable to heat treated hay. He also pointed out that the dry matter losses were decreased in the baling process when the liquid chemicals were applied.

Also noted, by the use of feeding trials, was that the hay was accepted and the gains on the livestock were better than with the heat treated hay. The mold level in the acid treated hay was also less, but Hoffman said the heat dried hay had a higher vitamin A content.

Hoffman finished his presentation by telling the audience that field cured hay had higher losses during baling than did the acid treated hay. There were less losses during the storage and feeding processes also.

The highest losses, Hoffman said, was with the large packaging of hay such as in stacks but the acid helped to reduce those losses also. Storing round bales or stacks outside decreases the quality also, noted Hoffman.

Also presented at the Berks County Crops Day was a lecture by William McClellan, on general alfalfa weed control, weed control in corn, and Johnson grass control. Wayne Hinnish presented a lecture on lime quality, and nitrogen fertilization. Both were Penn State agronomy specialists.

Wellsville 4-H announces winners

WELLSVILLE, Pa. - Wellsville Boots and Saddle 4-H Club announced Terri Lehigh is a county Blue Form winner and received a trophy for other achievements.

Jennifer Kristich was the top 4-H Club member of the year.

Other trophies for achievements were presented to Diane Kimmel, most active first year rookie; Teresa Staullman, most club activities. Project awards went to Shelly Lehigh, 8-10 year olds; Lee Schneider, 11-12 year olds; Terri Lehigh, over 12 years.

County Agent Tim Markovits judged the projects. The event was held at the Wellsville fire hall Advisers are Judy Lehigh, Casey Schneider and Ephraim Sheffer.

PP&L offering monthly bills

ALLENTOWN, Pa. - Customers of Pennsylvania Power & Light Company who receive their electric bills every two months are now being given the opportunity to request monthly billing.

Leon L Nonemaker, PP & L vice president - Division Operations explained the reason for the newly adopted plan. "We recognize that rising electric bills caused by a combination of colder-than-normal weather conditions, changes in living habits and higher rates and fuel charges can cause household budgeting problems for many of our customers."

He said, "Our monthly billing plan will not affect a customer's overall cost for the electricity used, but it will allow more manageable budgeting by letting our customers make 12 payments over a year's period instead of the current six payments. Nonemaker stressed that the new monthly billing plan is optional for bimonthly customers. He said, "Those of our customers who are satisfied with the current method of bimonthly billings will continue to be billed every other month. If we do not receive authorization from them to change over, there will be no changes in their billing procedure

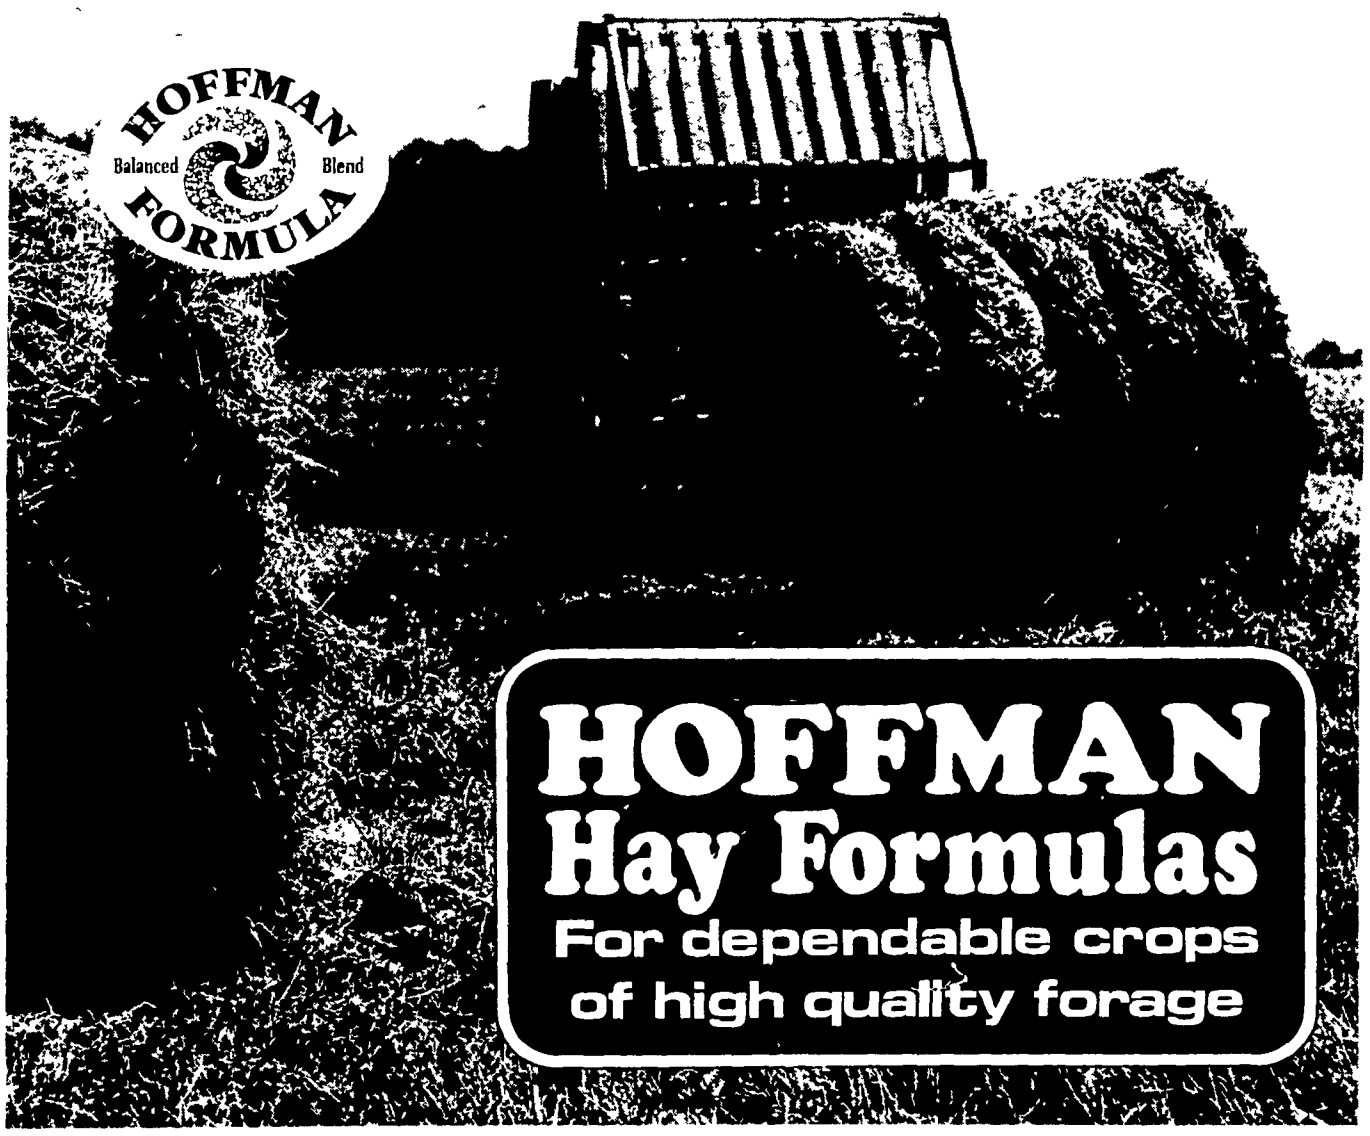
Emergency acknowledged

WASHINGTON, D.C. - Secretary of Agriculture Bob Bergland has announced that 23 counties in three eastern states have been authorized to issue emergency allotments of food stamps to families left jobless by the winter freeze and fuel shortage.

USDA's Food and Nutrition Service (FNS) has granted requests from Maryland and New York for emergency food stamp aid.

Earlier this month, FNS approved emergency food stamp aid for eight counties in eastern Virginia.

FNS officials said emergency approval was given because there counties could no longer handle the needs of victims through their normal procedures.



Hoffman Formulas are the modern, practical approach to getting bigger crops of high-quality forage. They combine and blend leading varieties of grasses and legumes to give you broad spectrum performance. Help you still make a good crop when adverse weather strikes . . . when soils or climate conditions are less than the best. Or when disease is a problem. And their built-in high yield potential really blossoms under good conditions.

Every one of the 14 Hoffman formulas is designed to produce top results for specific uses under northeastern conditions. See your Hoffman Seed Man, or write for a copy of our new catalog.

- Updated and improved every year.
- Top grade, high-germination, clean, tested seed.
- Matched maturity varieties.
- Pre-inoculated, ready to sow.
- Crop quality improved by proper grass legume balance.
- Special formulas for hay, pasture, silage and haylage.

A UNIQUE

STOVE and FIREPLACE combination

The Efficient Way To Wood Heat Is With The MORSØ STOVES

Franklin stoves and fireplaces allow most of the heat to escape up the flue including volumes of warm air from your home. However with the Norwegian & Danish tight design and unique baffle system stoves burn highly efficiently. Keeps 75 percent of heat generated right in your home. Burns 8 to 18 hours on one load (depending on size). Mornings are warm. One fire lasts all winter.

- Heats 10 000 Cu. Ft. Home (28 ft. x 45 ft. area)
- Burns 16 to 18 Hours Each Loading
- Enamel Finish Black or Green
- All Cast Iron With Brick Lining

CCC board meetings opened

WASHINGTON, D.C. - Comments on proposed procedures for conducting board meetings of the Commodity Credit Corporation (CCC) under the Sunshine Act were called for last week by the U.S. Department of Agriculture.

Under the USDA proposals, CCC board meetings would be open to the public unless the discussions were on maters which would have significant market impact. Premature public disclosure of discussions by the CCC board about the levels of price support for commodities, interest rates on loans, the quantities of commodities to be allocated for export programs, and other program terms and conditions might lead to significant speculation in commodities, the USDA pointed out. It is likely that most of the board deliberations will have significant market impact. After the meetings, these board actions would be announced so that all members of the public would be notified of the decisions at the same time.

Additional details of USDA's proposals were published in the Federal Register Feb. 8. Interested persons may submit written comments, suggestions, or objections regarding the proposed rules to the Secretary, Board of Directors, Commodity Credit Corporation, U.S. Department of Agriculture, Washington, D.C. 20250, not later than March 9. Copies of all written comments received will be available for examination in Room 218-W, USDA's Administration Building.

World snowed under

WASHINGTON, D.C. - Sixty-five percent of the land mass of North America - about 6.4 million square miles (15.8 million square kilometers) - was snow covered last month, the most extensive snow coverage in the past 11 years, satellite pictures have shown.

Donald R. Wiesnet, senior research hydrologist with the National Oceanic and Atmospheric Administration (NOAA), said analysis of NOAA satellite imagery also showed heavy snow cover in Europe and Asia, where 44 per cent of the land mass was snow covered.

NOAA's National Environmental Satellite Service began observing snow cover from satellite imagery in 1966. Eurasia has had a greater expanse of snow cover - in February 1968 and February 1972 - during the 11 years of observation. But the combined coverage figures last month for both North America and Eurasia totaled 16.8 million square miles (42.3 million square kilometers), the greatest amount of snow cover ever measured by satellite in one month in the Northern Hemisphere.

Wiesnet and his fellow scientist, Michael Matson, noted that following the last heavy snow cover winter - 1971-72 - the next three winters were marked by successive decreases in snow cover.

PSU hosts poultry conference

UNIVERSITY PARK, Pa. - On April 12 and 13 Penn State will host a Poultry Sales and Service Short Course, an annual event. Dealing with a wide range of topics taught by top men in the industry, the course should appeal to a cross section of poultry servicemen in Pennsylvania.

Beginning on Monday, April 11, a poultry products smorgasbord will be held at the home of Floyd Hicks, professor of poultry service Extension, Penn State University, who is also the co-chairman of the two-day event.

The actual conference then begins on Tuesday morning with the topics of "MG Exposure - Progress Report," by Robert F. Gentry, professor of veterinary science, Wiley Diagnostic Lab, Penn State University; "Personnel Management - Motivation," by Tom Brewer, associate professor of ag economics Extension, and Joe Cardenuto, professor of Rural Soc. at Penn State; and "Servicemen's Calls - Management Tool," by Jacob Musser, of Victor F. Weaver, Inc., New Holland.

Tuesday afternoon's subjects include: "Important Field Health Problems," by Dwight L. Schwartz, professor of veterinary science Extension; "Intermittent Lighting on Layers," by Charles E. Ostrander, Cornell University, and "Intermittent Lighting as it affects Broilers," by William D. Weaver, Jr., Extension poultry specialist of the Virginia Polytechnic Institute.

Later in Tuesday afternoon's session, Robert Spiller, northern division manager of Chilson's Management Controls, Modesto, Calif, will speak on "Records Analyses," and Big Dutchman Engineering will discuss feed management by speed feeding and electronic scales.

Tuesday evening will be highlighted by a dinner meeting at which John Hoffman, executive director of the Pennsylvania Poultry Federation, will be toastmaster. The featured speaker will be Fran Fisher on the topic of "1976 Football Highlights - the Nittany Lions."

Wednesday's events consist of four topics of discussion and a panal of "What's on you mind?" To begin the morning, Renaldo Resurreccion, assistant professor of veterinary science, will speak on the Wiley Research and Diagnostic Lab of Penn State University; James W. Deaton, Mississippi State College, will speak on "Humidity and Poultry Production; Acme Engineering will speak on "Evaporative Cooling," and Dr. Robert Eckroade, from the diagnostic laboratory at New Bolton Center in Kennett Square will speak on "The Serviceman's role in Disease Control."

Chairman for the various sessions will be Jay Irwin, Lancaster County agent; Herbert Jordan, associate professor of poultry science Extension; and John Schwartz, Adsms County agent.

The two-day conference does require a fee, and all participants must be responsible for their own lodging.

For further information, contact the Extension office in your area.

Agristor loans pass $100 million

MILWAUKEE, Wis. - A AgriStor credit terms are designed to be consistent with the life-span of Harvestore structures. Loans make by the A. O. Smith subsidiary are often assumed by conventional lenders at the convenience of the borrower.

MILWAUKEE, Wis. - A loan recently make to a northwest Missouri farmer for the purchase of a Harvestore feed storage unit exceeded the $100 million mark in loans make by AgriStor Credit Corporation to North American farmers since its founding in 1967.

"We at AgriStor feel that we have passed an important milestone in our history as a farm lender," said Jon Bruss, pesident of the A O. Smith Corporation subsidiary, which is headquartered here.

AgriStor was established to aid farmers in the purchase of equipment manufactured by A. O. & Smith Harvestore Products, Inc., another A. O. Smith subsidiary It handles credit for 10 to 20 per cent of all Harvestore purchases.

AgriStor offers a variety of plans for financing Harvestore's complete product line, which includes oxygen-limiting feed storage structures, automated feed handling equipment, and the Slurrystore liquid manure management system.

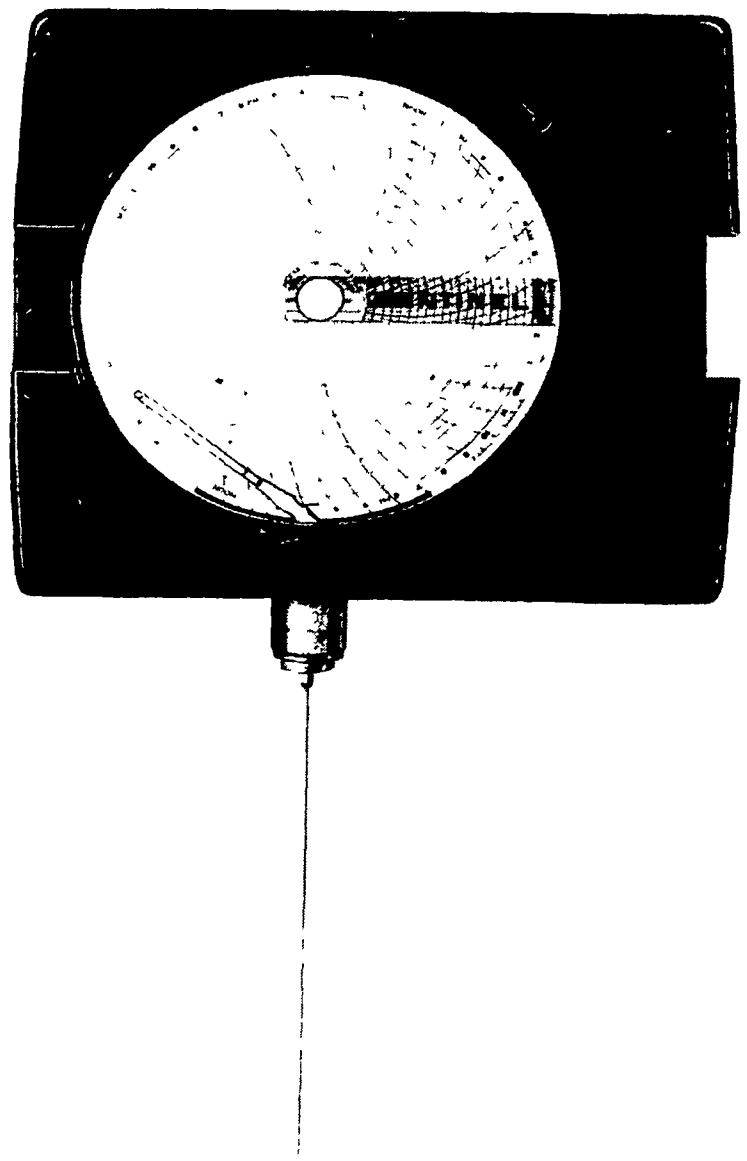
THE SENTINEL



Round-the-clock guardian of stored milk temperature

If you depend upon your milk check for a living, protect that income by insuring milk quality.

The least expensive, single-payment insurance obtainable is the Sentinel — the heavy-duty, 10-inch recorder which charts round-the-clock temperature of your milk-cooling or holding tank.

Assure yourself — and your processor — that proper milk temperature is always maintained.

Keep a permanent log of compressor operation and tank cooling or pre-cooling efficiency, from first filling to pickup.

Cleaning temperatures — increasingly questioned by sanitarians — are recorded on the same chart.

At little added cost, the Sentinel is available with provision for actuating an alarm or warning light if milk holding temperature rises above pre-set level.

Remember — if it prevents the loss of only one tank of milk, the Sentinel has paid its own way.

Hog sale grosses $10,140

KUTZTOWN, Pa. - The Berks-Lehigh County Pork Producers Association held their annual Spring Show and Sale on Feb. 19, 1977 at the Kutztown Fairgrounds. The judge was Leon Arnold, secretary treasurer for the Pennsylvania Yorkshire Co-op Association.

The champion bred gilt, a Hampshire consigned by Earl Rabenold, Kutztown, Pa. sold for $220.00 to John Gotwalls, Collegeville,

The champion littermates were bought by Allen Moyer of Souderton for $370.00. They were Yorkshires consigned by Edward H. Oswald, Slatington.

Calvin H. Lazarus had the champion single open gilt which was sold to Roger Bealer, Breinigsville, Pa. for $145.00, also a Yorkshire.

The Champion Boar, consigned by Edward H. Oswald, Slatington, was sold for $210.00 to Earl Hoffman of Oley. This boar was also a Yorkshire.

A total of 49 head were sold for a total sales of $10,140.00. The averages are as follows; 20 bred gilts at $275.25; 14 littermate pairs at $166.43; 4 open gilts at $162.50 and 11 boars at $150.45.

The top half of the show results are as follows; champion bred gilt, a Hampshire consigned by Earl Rabenold, Kutztown. 2. Lazarus Bros., Germansville; 3. C.H. Lazarus and Sons, Whitehall; 4. C.H. Lazarus and Sons, Whitehall; 5.Lazarus Bros., Germansville; 6. Terry Bennecoff and Son, Kutztown; 7. C.H. Lazarus and Sons, Whitehall; 8. Warren C. Loch, New Tripoli; 9. Terry Bennecoff and son, Kutztown; 10. Rocky Acres Farm, New Tripoli.

Littermate pairs

Champion; Edward H. Oswald, Slatington; 2. C.H. Lazarus and Sons, Whitehall; 3. C.H. Lazarus and Sons, Whitehall; 4. Rocky Acres Farm, New Tripoli.

Single open gilts

Champion; C.H. Lazarus and Sons, Whitehall; 2. C.H. Lazarus and Sons, Whitehall; 3. C.H. Lazarus and Sons, Whitehall; 4. Rocky Acres Farm, New Tripoli.

Boars

Champion; Edward H. Oswald, Slatington; 2. Earl H. Rabenold Kutztown; 5. Warren C. Loch, New Tripoli.

CFTC seeks comments

WASHINGTON, D.C. - The Commodity Futures Trading Commission is requesting comment on revisions of the definition of "bona fide hedging transactions or positions" and the requirements for classifying positions as bona fide hedging.

Comment also is sought on a proposed new regulation dealing with requirements for classifying "certain other positions" as bona fide hedging.

The Commission seeks "substantive" public views on the proposed amendments.

The CFTC has had the issue under the intensive review for over a year. In amending the Commodity Exchange Act in 1974, Congress directed the Commission to review the definition of hedging.

The revisions resulted from comments at public hearings early in January, which indicated that a broader definition of hedging was both necessary and desirable. The revisions also take into consideration (1) the responsibility to maintain orderly, competitive markets, and (2) that the commercial utility of futures trading dpends on the orderly operations of the markets.

A major change from the current definition deals with cross hedges and anticipatory hedges. The Commission proposed to adopt a provision that prohibits exemption from speculative limits for positions held during the last five days of the contract month, except under special circumstances where the position has been approved in advance.

Interested persons will have 60 days in which to submit written statements for consideration prior to final action. Comment should be mailed to: Secretariat, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581.

Livestock industry burdened

KANSAS CITY, Mo. - The entire livestock marketing sector "has traditionally provided the most inviting hunting preserve" for government activity, which has "placed upon the entire livestock industry a burden which so far is impossible to measure" in terms of volume or value.

The results of this governmental regulation "have not been constructive nor beneficial," says C. T. 'Tad' Sanders, general manager of the Livestock Marketing Association.

In spite of the "high risk characteristics" of livestock marketing, Sanders calls for regulatory reform, saying that the marketing sector is faced with "one ever present obstacle which stands in the path of innovation and progress...the heavy hand of the regulatory arm of government."

He says that regulatory reform is needed to remove the burden of "regulatory strangulation" from all avenues of livestock merchandising. Sanders cited the work of the Livestock Laws Reform Commission in this area. LLRC is an LMA - allied organization.

125-HP JOHN DEERE 4430

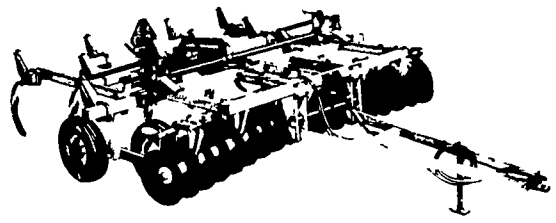
A thoroughbred that likes to run and run; a sure bet if your land is measured in sections

The bloodline of the 4430 is obvious—4020, 4320 These tractors became known as John Deere "classics" based on their performance in the field And, the 4430 makes it "three in a row"

The 4430 is a long-distance runner No matter what size field it enters, you can count on a 4430 to run and run without having to stop and rest It's nimble and agile It instantly responds to any command Stop and let us tell you about the 4430 track record

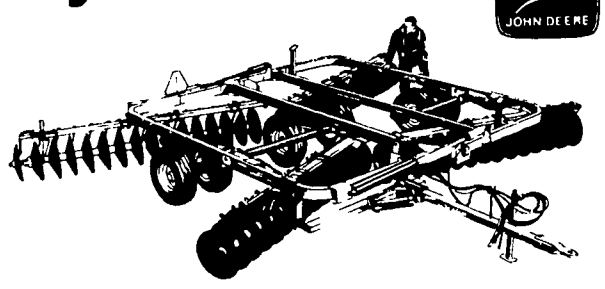
JOHN DEERE TRACTORS—
A SOUND, LONG-TERM INVESTMENT

We've got the new one-trip tillage tool that works soil and incorporates trash: Ask about our Mulch Tiller



This chisel/disk combination allows deep one pass tillage in heavy crop residues Disk blades spaced 9 inches apart cut and mix stalks or stub ble and tear up root clumps — even when driving straight down old crop rows

220 LEVEL-ACTION™ DISK 2-section flexibility with hydraulic fold



Simply move one tractor hydraulic lever to fold the wing section on this 220 Level Action Disk for safe, secure transport The wing folds over center to rest on the mainframe it can t unfold accidentally, or without hydraulic pressure

Choose 17 or 18½ foot working widths that put 107 to 113 pounds to work on each blade

Level Action disk benefits abound too You get overlapping front gangs that cut away center ridges offset rear gangs that pull in the same amount of soil front gangs move out and a self leveling line of draft hitch that puts up to 100 percent working weight on every disk blade when cutting at full depth

Inter-state blend price dropped by 2 cents/ cwt.

SOUTHAMPTON, Pa - Area dairy farmers who are members of Inter-State Milk Producers' Cooperative received $10.04 per hundredweight for milk they produced during January.

This price, known as the weighted average price, is the actual average price all Federal Order 4 dairymen receive for milk containing 3 5 per cent butterfat. It is adjusted accordingly for higher or lower butterfat content.

The January weighted average blend price is equivalent to 22 cents per quart. The January price compares to $10.06 per hundredweight for the previous month and $10.80 per hundredweight for a year ago. Quart equivalent prices were 22 cents for the previous month and 23 cents for a year ago.

The farm base milk price for January was $10.34 per hundredweight while the excess price was $8.23 per hundredweight. The butterfat differential was 10.4 cents for each point above or below 3.5 per cent. The base price is up .01 per hundredweight from the previous month and down.68 per hundredweight from a year ago. The excess price is down .11 per hundredweight from the previous month and down .73 per hundredweight from a year ago.

A total of 465 million pounds of Federal Order 4 producer milk was pooled in January of which 62 per cent was sold as Class I, compared to 63 per cent for the previous month and 68 per cent a year ago. A total of 7,979 Order No. 4 producers provided 15 million pounds per day to dealers during January averaging 1,880 pounds per farm per day. Total value of producer milk was set at $46 million for the month.

Egg production down from '76

HARRISBURG, Pa. - Pennsylvania layers produced 260 million eggs during January 1977, up nearly one per cent from the previous month but 10 per cent below a year earlier, according to the Crop Reporting Service.

The January average of 12.8 million layers is unchanged from the previous month but nine per cent below a year earlier. Egg production per 100 layers during January totaled 2034 eggs, up nearly one percent from the previous month but one per cent below a year ago.

The nation's laying flock produced 5.5. billion eggs during January, down one per cent from both the previous month and a year ago. The number of layers during January averaged 279.8 million compared with 280.6 million a year earlier. The average rate of lay during the month was one per cent below January 1976.

PROTEIN vs AMINO ACIDS

There always seems to be confusion about the value of specific protein levels in poultry rations. A nutritionist used this analogy recently. Protein in feeding a chicken has about the same value as a dollar bill does in "feeding" a parking meter. The dollar bill has to be broken down into individual coins to feed the meter. Further, not every coin is useful and some give us more "time on the meter" than others.

The same is true for protein in a poultry ration. To be beneficial, it must be broken down into individual amino acids. Some of these amino acids are not very useful while others are required for the specific performance we want to achieve.

In feeding the meter, it wouldn't make any difference whether we had a 5, 10, or 20 dollar bill, it's the individual coins that count. In feeding laying hens, it doesn't make any difference whether we have a 15, 17 or 20 per cent protein ration, it's the individual amino acids that makes the performance difference.

BIO LAYENA INTAKE GUIDES

BIO LAYENA[1]	PRE PEAK[2] (18-28 wks) In House Daily Maximum Temperature	POST PEAK[2] (28 wks.+) Feed Intake Lbs/100 Hens/Day
Bio Layena 100	Below 60°F	Over 25.0
Bio Layena 107	60-70°F	23.4 to 25.0
Bio Layena 114	70-80°F	21.7 to 23.3
Bio Layena 121	80-90°F	20.0 to 21.6
Bio Layena 128	Above 90°F	Under 20.0 lbs.

[1] The numbers after the Bio Layena rations indicate the Purina Bio-Rating. Each subsequent ration contains 7 per cent extra amino acid, vitamin and mineral fortification over the previous one. For example, Bio Layena 114 contains 7 per cent more fortification than Bio Layena 107 and 14 per cent more than Bio Layena 100.

[2] Values are guides only since feed use varies due to wastage, strains, etc. Use local judgment as when to change rations.

Estate planning a must for future

By JOYCE BUPP
York Co. Reporter

YORK, Pa. - Executor; probate; testate; marital deduction. Know what they mean? If you don't, you should!

Estate planning is becoming increasingly important as a long - term part of farm management. New tax laws passed in 1976 have pushed estate planning to the critical point.

"Some farmers think the new tax law did them a favor. We're here to tell you it did not!" emphasized Phillip H. Tarpley, an estate planning specialist with Farm Family Insurance, an affiliate of the Pennsylvania Farmers' Association.

Tarpley and Joseph Larkin, an attorney specializing in farm estate planning, met with members of the York County Farmers' Association on February 24 at the Community Room in the York Mall. About 100 farm men and women turned out to hear the recommendations of the specialists.

Tarpley emphasized that farmers tend to feel that land is and forever shall remain theirs. However, when a land - owner dies, attorneys and the Internal Revenue Service disregard the farmer's attachment to his land as part of his life - they simply look at land in terms of taxable dollars.

Through properly written estate plans and wills, a farm family can avoid paying literally thousands of dollars in the various taxes levied by the state and federal governments.

By writing a will, a landowner can choose the executor of his property, thus avoiding having it thrust into the hands of an impartial bank or attorney who may not care what eventually happens to the family farm. Guardians can be named for children, avoiding possible legal proceedings for their care and disposition.

Federal estate taxes begin at 18 per cent of a net estate and can run up as high as 70 per cent of the net estate worth. Pennsylvania charges a six per cent inheritance tax, although none is levied on estate transfer to a spouse; neither are probate taxes charged on inheritances from a husband or a wife.

A wife is allowed to inherit, tax free, one-half of the estate, or $250,000, whichever amount is larger. She will be taxed on the remaining inheritance valuation. When she dies, children inheriting the entire estate left by the mother will pay taxes on the total amount, even though the mother originally paid taxes on half of the estate after the father's death.

"How do we get around that?" questioned the tax specialists.

They recommend making the most use of the marital deduction, and then willing the remaining estate to the children after the father's death. The wife will not be taxed on her marital deduction inheritance, and the children will pay the tax, only once, on the remaining amount going to them.

"This could save the children up to $60,000 on a $500,000 net estate settlement in the long run," advised the farm tax experts. "By a few simple words properly set down in a will, thousands of dollars can ultimately be saved."

"What's the best way to pass my farm on to my son?" is another key question frequently raised by farmers in estate planning.

Estates are generally taxed on their value at the time of the father's death. However, a son will have to pay taxes on the capital gains made on the property value increases after the father's orginal purchase.

New tax legislation has written into it a section known as the "Special Valuation Provision." Both Tarpley and Larkin question the provision as being a possible trap for land inheritors.

"It's the worst compromise Congress could have possibly come up with," flatly stated Atty. Larkin.

Under the provision, inherited land can be valued for its usage, not necessarily at its market price. However, if the land is later sold for top - dollar price, within 15 years, the IRS will recomputate the tax, based on the market price, and add the tax levy on to the selling taxes. The clincher to the provision, in the experts point of view, is that legally a mortgage cannot be taken on the land by a lending agency, because of this "floating tax lien" possibility, which prevents issuance of a clear title to the property.

"Unless this is revised - and soon - the young farmer on the East Coast is done for," warned Larkin. "The nice big bone they threw to the farmers in the Tax Reforms bill is useless."

Because partnerships, land agreements, and loosely structured family farming arrangements can change rapidly under unexpected human circumstances, the specialists advised "putting everything down on paper." Such agreements should be tightly drawn, businesslike and properly written, or the Internal Revenue Service may not recognize it, if tax questions arise.

"If you're getting ready to set up estate arrangements," suggests Larkin, "Go to your attorney and tell him you've just died and that you want to know how much in taxes you're going to have to pay.

The two experts recommended seeking knowledgeable specialists to set up farm estate plans, because many legal consultants just aren't fully advised on the unique farm inheritance problems. They both agreed that it is critical to the future well - being of a farmer's family that he set up an individualized plan now - while he is still able.

"They'll get you, sooner or later. In estate planning, we try to make it as late as possible," concluded Larkin.

March 11 is deadline for ordering low-cost trees

LEESPORT, Pa. - If you wanted to beautify your yard but couldn't afford the cost of ornamental trees, here is your chance. The Berks County Conservation District directors are offering everyone a chance to purchase trees at a very low cost. Berks Countians are urged to help support the Seedling Sale.

Profits realized from the sale of these seedlings go into the general operating fund; thus requiring less monies from the county taxes to operate the District office.

The following trees are available in packets of six for $1.00 or 100 for $13.00: Colorado Blue Spruce, Austrian Pine, Douglas Fir, Scotch Pine, Norway Spruce, Mugho Dwarf Pine, and Arboritae. The following three year old decidous trees are also available at the cost of $.75 each; Chinese Chestnut, Tulip Poplar, and Red Maple. White Birch are also being offered at the price of three for $1.00, since they are recommended to be planted in clumps of three.

All orders must be into the Berks County Conservation District Office, Leesport, Pa. no later than March 11, 1977. The trees will be available for pick up at the District Office between 9 a.m. and 3:30 p.m. on April 18 and 19, 1977. Checks are to be made payable to: Berks County Conservation District (tree sale) and are to be forwarded to Berks County Conservation District, Ag Center, Leesport, Pa. 19533, no later than March 11, 1977.

Discriptions of the trees are available at the District office.

Shelhamer praises Lancaster County

By DIETER KRIEG

LANCASTER, Pa. - Praising Lancaster County's large and diverse agricultural industry and telling a gathering of more than 200 dairymen he was proud to be their secretary of agriculture, Kent Shelhamer's remarks drew approval from the audience.

In thanking Secretary Shelhamer for his appearance at the Lancaster County Dairy Day on Tuesday, emcee Rohrer Witmer said: "You're talking our language."

While noting how impressed he was with Lancaster County agriculture, the agriculture department chief wasn't in town to just offer praises. He was here to speak about Pennsylvania agriculture and how various aspects and programs fit together to form the entire picture.

Secretary Shelhamer said he was proud to be the state's new agriculture secretary and proud to offer the services of his department. "We've got a lot of things for you," he said, then listing several bureaus and services which he feels are as good or better as any in the nation. Among Pennsylvania's outstanding ag programs are the level of indemnity payments, which stand higher than any other. "The Bureau of Animal Industries is second to none," Shelhamer affirmed, "and the Diagnostic Laboratory is highly capable of dealing with problem situations."

Shelhamer hit the dairy farmers' interests when he

Kent Shelhamer

told them that when he was a boy he had to drink his milk at every meal and clean up his plate. "That's not so any more and that in itself should be a clue for a greater need in advertising and promotion," he remarked. The secretary clearly identifies himself with concepts which would increase and improve the farmer's markets. He believes it's an area which has been overlooked in the past and that the producer should have some say about the sale and price of his quality product.

"There'll be some ups and downs in this business, Shelhamer continued, "but you in the dairy business are lucky because your income is more stable than most.

Talk about getting into trouble with budgeting - I've been there," he proclaimed. Explaining, he asked his audience "how would you like to be in the fruit business?" The new ag chief owns an orchard in Columbia County.

"I'm convinced you'll have to fight in the future for your piece of the land," Shelhamer said. "Those of you with land in Lancaster County are fortunate." He praised the farmers for their dedication and encouraged them to continue in their work.

One-eighth of Pennsylvania's total milk production comes out of Lancaster County, Shelhamer pointed out, stressing the importance of agriculture in the County. "Lancaster County dairymen daily produce the milk for 1.5 million people. The milk you produce has an annual value of $80 million," Shelhamer said.

The agriculture secretary also observed that cow numbers have gone down considerably, but that daily production has remained fairly steady. "This is certainly a tribute to a lot of factors," he said, naming Penn State University, the Extension Service and the dedication of Pennsylvania dairymen as primary reasons for significant increases in productivity. There's been an average increase of 30 per cent per animal, according to Shelhamer's report.

The future, as Shelhamer sees it, looks "iffy." The agriculture secretary has on numerous occasions voiced his concern over rising milk production. Similar fears were briefly uncovered here at the Dairy Day meeting. The rise in production is just one reason why Shelhamer believes greater efforts in advertising and promotion are in order.

Nonetheless, the new agriculture secretary believes strongly in Pennsylvania agriculture. He cited one product after another in which Pennsylvania's ag production ranks within the top five states in the country. Milk production was included on the list. "And all of that comes from a so-called industrial state which is noted for its coal and steel," said Shelhamer.

"CAREFREE"® STALLS

Jamesway "CAREFREE"® stalls are hot-dip galvanized inside and out for long life. Nothing is anchored in concrete. Attractive design simplifies cleaning, provides nice appearance, cow comfort.

Kettering's corn wins

LANCASTER, Pa. - James Kettering, a 28-year old grain and livestock farmer, was declared the Lancaster County Five-Acre Corn Growing Champion for 1976. His record yield of 209.8 bushels per acre, using Pioneer variety 3331, topped all other entrants.

Kettering planted 175 acres of corn in 1976, using the following fertility and cultural practices: 200-040-080 plowdown, 022-060-030 in the row and one ton of lime applied every two years. He had good weed control using Atrazine and Lasso, and used Furadan as an insecticide. The final plant population was 20,376 in 32-inch rows. The Winning field was planted May 1st and harvested October 24. Rainfall was rated as above average.

Legislative points discussed at Virginville Grange meeting

At the February 16 meeting of the Virginville Grange the legislative committee reported on current points of concern. They are working to eliminate stop signs at intersections where the view is adequate for yield signs to be used; to encourage Penn Dot to erect more snow fences along secondary roads; to eliminate railroad signs at inactive tracks; to influence the federal government to stop nuclear energy spending, and put more funds into solar energy; and to encourage government officials to be examples of decelerated salaries and to work for decreased taxes.

Dates announced for future reference were: March 5 - Pomona meeting in Centerport Grange; March 7 - the youth will meet to plan the program for April 7; March 13 - the juniors will go bowling at 12:45 p.m.

The winners from the cherry pie contest were Helen Epting, first; Harriette Miller, second; and Katie Moll, third.

Other announcements made at the meeting were that the Women's Activity committee gave a check to the Grange to send to the Kutztown Medical Center. Also, Virginville Grange received a certificate from the National Grange for having six new members in 1976. A badge was presented to Feryl Treichler, who was master at the time.

Mrs. is bank manager

Barbara Kensinger

STRASBURG, Pa. - Barbara A. Kensinger has been named manager of the Millersville office of the First National Bank of Strasburg.

Mrs. Kensinger joined the Bank in 1970 as head teller of the Lancaster office. In 1973 she was promoted to loan officer and assistant personnel officer and in 1974 was named assistant manager of the Lancaster office.

Mrs. Kensinger resides in Lititz with her husband Paul. They have two children.

State Grange sets meetings

HARRISBURG - Grange leaders from 20 Pennsylvania counties will attend a series of area meetings March 11 and 12 to discuss the organization's plans, programs and activities for 1977.

The first of the meetings will be held at 7:30 p.m. Friday, March 11, at Mahoning Grange in Trade City, Indiana County. The area will include Indiana and Jefferson Counties and parts of Clarion, Armstrong, Cambria and Clearfield Counties.

The second meeting will be held at 1 p.m. Saturday, March 12. Tuscarora Valley Grange will host the meeting which will be held at St. Mary's Activity Hall, two miles north of Shade Gap in Huntingdon County. The area will include Fulton and Franklin Counties and parts of Bedford, Blair, Huntingdon, Mifflin, Juniata, Perry and Cumberland Counties.

The third meeting will be held at 7:30 p.m. Saturday, March 12 at Valley Grange in Lewisberry, York County. This area includes York, Adams and Lebanon Counties and parts of Cumberland, Perry, Dauphin and Lancaster Counties.

Officers and committee chairmen of Subordinate and Pomona Granges and state and junior deputies will attend the sessions. They will meet with State Grange leaders, including:

J. Luther Snyder, state master; Mrs. William Buffington, lecturer; N. Gale Moore, secretary; Mrs. Leroy Hoover, Women's Activities director; Douglas Bonsall, youth and young marrieds director; Mrs. Alan Merkel, junior director and Mr. and Mrs. Nevin Hill, membership directors.

In announcing plans for the meetings, the state master explained that 15 area meetings will be held in Pennsylvania this year to provide an opportunity for local and county Grange leaders to attend sessions close to home.

Tree seedlings offered

SPRING GROVE, Pa. - Landowners are reminded that there is still time to plan for tree planting to be done in the Spring of 1977. The Glatfelter Pulp Wood Company, here will share, on a 50-50 basis, the cost of seedlings with interested landowners. Since the inception of the Company program in 1951, more than 16 million seedlings have been furnished to landowners in these 13 south-central Pennsylvania counties: Adams, Berks, Chester, Cumberland, Dauphin, Franklin, Fulton, Juniata, Lancaster, Lebanon, Perry, Schuylkill and York.

Tree seedlings available this year under the Glatfelter program are Austrian pine, Virginia pine, and Japanese larch. Orders are filled on a first-come, first-serve basis so it is important to get orders in early. All seedlings are furnished by the Pennsylvania Department of Environmental Resources. The Glatfelter Company imposes no restrictions of any kind, but landowners planting these trees must comply with state regulations regarding these trees. For example, they may not be used for Christmas trees, decorative or ornamental uses or for windbreakers. Minimum order acceptable is for 1,000 seedlings, which will plant 1½ acres. All trees become the property of the landowners who may cut them at a future date for any wood product.

For information about placing your order, see your county agent, your Bureau of Forestry District Office or write directly to The Glatfelter Pulp Wood Company, Spring Grove, Pennsylvania 17362.

Milk ads check coffee breaks

ROSEMONT, Ill. - United Dairy Industry Association (UDIA) has once again shown its ability to meet member units' needs in quick fashion by producing, within a two-week period, a local-national advertising-promotion campaign enabling them to respond to the current coffee crisis.

Included in the total promotion effort are four "Take A Coffee Break" print ads and a complementary radio commercial. They were developed by American Dairy Association (ADA), the advertising and sales promotion arm of UDIA. At the same time, UDIA's communications division prepared food, business and editorial releases for national dissemination.

The ads and radio commercial have already been used by several member units to suggest people take a break from coffee and drink milk. These ads have also proved popular with other segments of the food industry. Besides several trade publications expressing interest in them, Piggy Wiggly supermarkets in Jacksonville, Florida, have contacted ADA for reproduction copies to be used in reduced format as "drop-in" illustrations for their weekly food page advertising.

One of the three UDIA communications' releases suggests drinking **Cafe au Lait, Kaffee mit schlag** or just plain coffee with milk to make a pound of coffee last longer. It points out that adding milk or cream to coffee not only stretches its use but also enriches it with such nutrients as calcium, phosphorus, protein and riboflavin. The other UDIA releases also recommend milk as an additive, or alternative, to coffee.

With this "instant" advertising-promotion campaign UDIA shows the advantages of having a national promotional organization that can react quickly to emergency situations. It also joins the many restaurateurs, food store owners and governmental executives in the country reacting to the current coffee crisis with planned or initiated boycotts, price freezes, coffee alternatives, etc.

FREY FREE STALL
LIFETIME FREE STALL HOUSING

Cut bedding costs 75 per cent, reduce labor for barn cleaning and cow washing, reduce teat and udder injury to the minimum — house your milking herd in free stall housing Each cow provided a stall for loafing She won't be stepped on, the rear curb forces manure out into alley for mechanical cleaning or washing A few minutes twice a day cleans the stalls and curbs, bedding lasts almost forever if your stalls fit the cows. Popular sizes are 6'6", 7' and 7'6" Size 'em by breed

Our free stall partition may be mounted on wooden head boards or we make a steel divider. Set the legs in 8 to 10" concrete curbs to hold and retain bedding. Stall floor can be soil, sand or gravel. Bedding — straw, sawdust, peanut hulls, ground corn cobs, etc. Should be installed with paved alley surface 8 feet wide for mechanical cleaning or washing.

- 8 Models all steel welded farm and feedlot gates
- 2 Models all steel welded head catch gate

TUESDAY, MARCH 15, 1977

12:00 Noon

54 HEAD OF HOLSTEINS 54

45 Cows - 36 Registered - 9 Grades
3 Registered Heifers - 4 Grade Heifers
2 Registered Yearling Bulls

All are artificially bred to Sire Power bulls including many to Elevation and Jet Stream. Many are A.I. sired including dtrs. of Vigo Charmcross, Admiral Imperial Chief, Strickst Star Ivanhoe, Kingstead Ivanhoe, Westside ABC Seaman, etc.

This is a good young herd with excellent breeding, good udders and lots of dairy character. All saleable milking animals are selling except the registered first calf heifers, which will be kept to form a nucleus of a milking herd. All grade heifers are selling and 3 registered heifers selected as possible 4-H project calves. The bulls are near service age and write good pedigrees.

The herd has been on DHI for the past year and cows selling have records to 18,820 and 788. Several over 600f and many with good records in progress. An excellent place to buy foundation Holsteins.

Also selling: A No. 175 3 hp. DeLaval milker pump and vacuum tank.

Terms: Cash. Lunch available. Sale in tent.

JOHNSHOLM DISPERSAL
Jan. 20, 1977

Joseph Johns V held a complete dispersal sale for his Holstein herd after 30 years of successful farming.

Six generations of the family have farmed here since 1806.

Joseph Johns V had built up the fourth highest milk producing herd in the state, the highest in Somerset County, for several years. In 1976, the herd averaged 20,300 pounds of milk and 762 pounds of butterfat for each of his 51 producing cows.

Merle Mishler of Hollsopple R2, Pa., and J. O. Fenstermaker of Homerville, Ohio were the auctioneer and sales managers for the sale. One hundred and six animals were sold with the top cow, Johnsholm R Maple Jo, selling for $4,100.00 and the top calf, which was only two weeks old, going for $1,550.00. The average price per animal was $1,075.00. There were over 300 people in attendance. The herd went to new owners in Pennsylvania and Ohio. The total for the sale brought just under $113,000.00.

xxx

A public sale of farm machinery and registered and grade heifers was held on February 26 at 10 a.m. at the home of Clair and Betty Maye Kreider, south of the Buck.

PENNA. DAIRYMEN ACHIEVE GREATER MILK PRODUCTION WITH PURINA'S "NEW" HI-O COW CHOW 36

BURK—LEA FARM, CHAMBERSBURG, PA.

Stanley and Wilbur Burkholder in their milking parlor.

Wilbur and Stanley Burkholder operate this 84 cow dairy herd and have this to say about Purina. "We have been on Purina Cow Chow 38 Percent B for some time and have been very happy with the results, however, when we switched to High Octane 36 Percent B in July, I have seen an increase of .3 percent in my butterfat test.

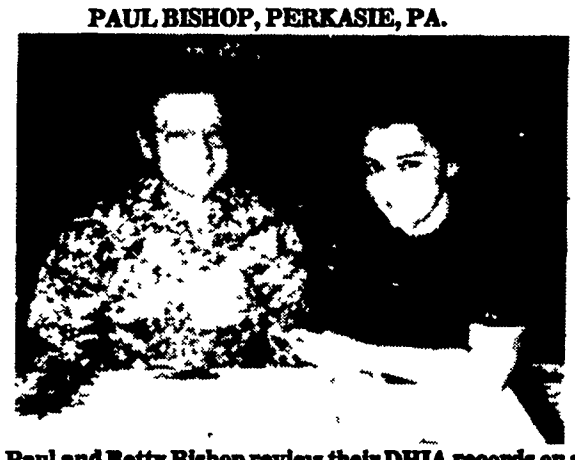
	No. of Cows	Pounds of Milk Per Cow
Before Hi-O 36 Percent B	86	42.8
4 months after	84	50.9

INCREASE 8.1 pounds of milk

Their roughage program consists of corn silage, haylage and hay. Purina Test Cow 18 Percent B is fed in a magnetic feeder to the early lactating and high producing cows. This allows for a better feeding program in their freestall operation.

Milk production is up and our cows really have an appetite.

PAUL BISHOP, PERKASIE, PA.



Paul and Betty Bishop review their DHIA records on a monthly basis.

Paul and Betty Bishop began feeding Purina in April 1974. Since that time the Bishop family has made considerable increases in milk production. In August 1976, they switched from Purina Cow Chow 38 Percent B to NEW Hi-O 36 Percent B The reason for the change? Paul comments, Purina District Manager Ike Yates suggested Hi-O 36 Percent B would give me more milk than I was getting. Having reached 600 pounds of butterfat, I decided my cows needed something extra to keep climbing.

As you can see, they continued their climb.

DHIA PRODUCTION RECORD

	No. of Cows	Percent Milking	Lbs. Milk	Lbs. BF	Percent B.F.
August '76	55.4	93.4	15142	593	3.9
December 1976	61.9	89.1	16235	637	3.9

The records show the improvement and a new stepping stone for the Bishops' toward higher production per cow.

BISHCROFT FARM, FOUNTAINVILLE, PA.

Two brothers Herman and Walter Bishop in front of their dairy barn.

Two brothers, Herman and Walter Bishop, operate a 140 dairy cow farm just north of Doylestown.

Before feeding Purina in May 1976, their grain ration consisted of soybean meal — vitamin-mineral premix. They had never fed Purina before that time.

When asked why they changed to Purina, Herman replied, "In the past five years we had been on a production plateau and just couldn't move off it. After listening to what Purina had to offer it looked as if Hi-O 36 Percent B could help us.

DHIA PRODUCTION RECORDS

6-75-10-75	average production per cow	44.68 pounds
6-76-10-76	average production per cow	51.72 pounds
12-76	average production per cow	52.80 pounds

Increase of 7.7 pounds per cow per day.

At the same time the butterfat test average increased .1 percent.

UPSTREAM FARM, EASTON, PA.

The attractive Upstream Farm Milk Store, which is always busy.

Upstream Farm is a family corporation where everyone is involved, including the wives, who play a major part in the total operation

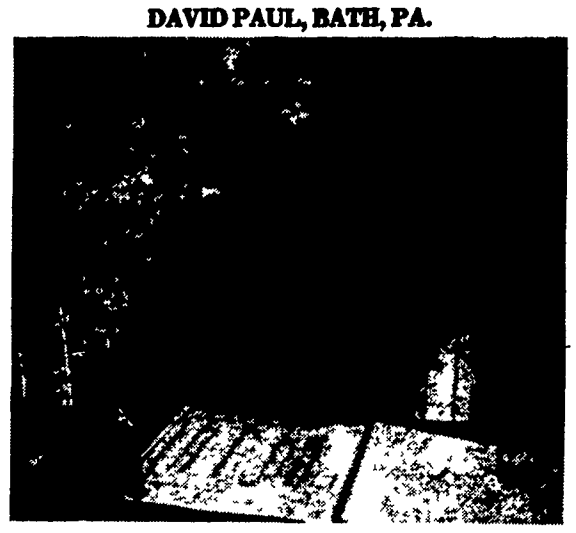
The 200 cows are managed in a free-stall — four group system with a rotary milking parlor Each group is fed according to their protein and energy needs based on production requirements.

Upstream Farm began feeding Purina in April 1976, prior to that they fed a soybean-premix Since that time they have had a tremendous increase in milk production They are a Purina Program Feeder and rely heavily on our recommendations Because of their confidence in Purina products, they changed to Hi-O 36 Percent B in September.

DHIA PRODUCTION RECORD

	No. of Cows	Lbs. Milk	Percent Fat	Lbs. Fat
April 1976	220.6	12,397	3 9	481
December 1976	194 6	14,100	3.8	526

DAVID PAUL, BATH, PA.



DHIA records are a major tool for this dairyman, David Paul.

David operates a dairy farm just north of Bath. David's situation is a little different than most dairymen today; he had little farm experience prior to going into business In fact, David grew up in Philadelphia and went on to teaching before he decided to enter the dairy business.

He has had his problems as all dairymen do, however, he doesn't let them get him down but keeps pushing, always trying to do better An example of this is a small blackboard at one end of the barn which list the cows that are open. David says this stares at him everytime he goes in the barn and as a result he watches those cows a little closer.

DHIA Production Records

	Lbs. Milk	Percent Fat	Lbs Fat
July 1976	13,624	3.7	496
January 1977	15,378	3.7	565

STONE HART FARM, ST. THOMAS, PA.

Carl Hartman and Bill Stoner.

Carl Hartman and Bill Stoner from St. Thomas, PA operate a 115 cow dairy farm. One of the things which they are pleased with is the fact that 36 first calf heifers are in the milking lineup. The heifers were raised on the Purina D & H Program.

Today their feeding program consists of corn silage, haylage, high moisture corn and Hi-O 36 Percent B concentrate. After switching to Purina Cow Chow 38 Percent B from soybean meal, they had an excellent increase in production and switched to Purina Hi-O when the opportunity to make more milk was shown to them.

	No. of Cows	Pounds of Milk Per Cow
Before Purina Hi-O	114	42.8
One month after	116	44.8
Three months after	115	49.0

We are very pleased with Purina Hi-O 36 Percent.
